INTRODUCTORY.

THIS work is a development and extension of that originally issued by the present publishers under the title of "A STANDARD DICTIONARY OF THE ENGLISH LANGUAGE." The endeavor has been to retain all those characteristic features which have stood the test of time, criticism, and popular approval, while adding all new information demanded by the world's advance in twenty years, and all new features that may promote ready and effective consultation. To attain this end, every word has been reexamined, every quotation, definition, or other item studied anew, with a view of bringing all to the highest attainable perfection by reediting and resetting. There has been in addition the strenuous endeavor to gather from every field of scholarship, art, science, exploration, commerce, industry, or invention, all new matter of real value and utility.

The governing principles of this, as of the earlier work, have been those announced by Dr. ISAAC K. FUNK in the introductory statement prefacing the original STANDARD, November 23, 1893, in the following words:

"The chief function of a dictionary is to record usage; not, *except in a limited degree*, to seek to create it. Yet, when custom or usage varies, it is important that a dictionary should be most careful, in its preferences, to give its sanction to the best forms and tendencies. It has manifold opportunities to render good service to the language by characterizing certain words and variant forms of words, and certain meanings or usages, as archaic or obsolete, as foreign, dialectic, or provincial, as colloquial, vulgar, slang, or low, as inelegant or erroneously formed. In the STANDARD the aim has been to help, so far as this may legitimately be done in a work of the kind, to simplify and perfect the language.

Function of the Dictionary.

"The editors of the various departments have been urged to keep always in mind that the essentials of a good dictionary are *comprehensiveness, accuracy, and simplicity.*"

I. THE VOCABULARY.

The "FUNK & WAGNALLS NEW STANDARD DICTIONARY OF THE ENGLISH LANGUAGE," based upon these principles, will be found to be decidedly in advance of previous editions of the STANDARD DICTIONARY in the number of words it contains. The first edition of this book contained 304,000 terms. Subsequently a supplement aggregating more than 13,000 terms was added, increasing the vocabulary proper to 317,000 terms. In the making of the present work no less than 513,000 terms of all kinds were critically examined, revised, or defined. Of these, 63,000 were rejected: (1) as dead beyond all hope of revival; (2) as obsolescent; (3) as of little or no value; and (4) as of such rare or specific use as to be manifestly without the scope of a dictionary designed for practical and popular purposes. Many of these rejected terms were mere obsolete variant forms of living words as used in the early stages of printing. Certain words current in the earlier periods of the history of the language are now omitted because, by the modern standard of culture, they are no longer approved. The decay of once useful words with lapse of time is one of the sure laws of language. Very many words used in the earlier stages of the sciences and of the mechanic arts have become obsolete, because displaced by the advancement of knowledge or the progress of invention. With obsoletes have been excluded many new words which have won transitory recognition, but give no evidence of value or permanence, such as minutely technical terms in science or industry, considered worthless by specialists in their own departments; experimental words, proposed even by some master in philosophy or science, but not adopted or given currency by other workers in the same field; nonce-words, used once by some gifted author, but never securing general acceptance.

A Comprehensive Vocabulary.

Terms Excluded.

While thus resolutely rejecting much, the purpose has been held steadily in view that the vocabulary should, first of all, embrace *all the live words* of the English language as used in the standard speech and literature of the day. It has been deemed wise to include, in addition, those terms that are commonly used, dialectically or otherwise, by large numbers of people in different parts of the English-speaking world. This body of terms has been augmented considerably by the territorial growth of the United States and of Great Britain, through the introduction of words in daily use among the peoples enjoying the protection of these two nations in their recently acquired dependencies, and also through the impulse given under the new flag to the development of various branches of science, commerce, industry, or manufacture, with special local applications.

New Words.

The English language has been so greatly enriched by words drawn from dialectal sources and enlisted for general use that sufficient reason is manifest for recording them in a popular dictionary. Such words are worthy of special consideration, and not infrequently provincial usages will well repay a careful study. The American school of Dialect Story-writing has contributed many new terms, while HALL CAINE, CROCKETT, WATSON (Ian Maclaren), and BARRIE have increased the original vocabulary of Manx and of Scottish terms. The Irish revival also has made it necessary to place on record not only new words but the names of persons and places that have been brought to the front through this revival. In this work the Editors had the valued assistance of Dr. DOUGLAS HYDE. Some space is allotted also to the English dialect spoken in Ireland which the recent labors of Dr. P. W. JOYCE have made available.

Dialectal Terms.

New terms of Latin or Greek derivation are constantly and freely introduced in the arts and sciences. The absorption of French words is unabated, as is evidenced by such terms as *automobile, charmeuse, chauffeur, garage, hangar, limousine, massage, pannier, sabotage, tonneau*, etc.

In the vast realm of science the growth during the past quarter of a century has proved phenomenal. Geology and Mineralogy have supplied thousands of new words. The terminology of Botany, has been completely recast (see THE BOTANICAL SCIENCES). In Chemistry, the discovery of new elements has enriched our vocabulary, and their practical application has exerted a marked influence on our civilization, while a wealth of new words has been evolved as a result of expert research seeking for the improvement or cheapening of commercial processes, as, for instance, in the case of paints and dyes. The field of radioactivity is a fertile source for the coinage of new terms, and in the department of Electricity a large number of the additions are due to developments in Telephony, Telegraphy, Electrical Traction, and allied branches. The departments of Aeronautics (including Aviation), Motoring, and Motor-boating have supplied a varied and wholly new terminology. Astronomers and meteorologists have named for us new phenomena; explorers have given us new words — Rear-Admiral ROBERT E. PEARY and Sir ERNEST H. SHACKLETON have used a number which are not to be found in the earlier editions of dictionaries. THEODORE ROOSEVELT in his *African Game Trails* has employed many Anglo-African terms for the first time. The definitions of these terms were submitted to him, and he reviewed them personally. The terms used in Forestry and Logging are based upon work done for the United States Forestry Service by GIFFORD PINCHOT, as Chief Forester, and published by the United States Government, and the vocabulary of Meteorology has been greatly enlarged under the direction of Dr. WILLIS L. MOORE, Chief of the United States Weather Bureau, Washington, D. C., by Prof. C. F. TALMAN, Librarian of the Bureau, who defined and edited all the terms in this department. The terms in Numismatics, including the table of Coins, were amplified, defined, or edited by Dr. T. L. COMPARETTE, Curator of the United States Mint at Philadelphia, by courtesy of the UNITED STATES TREASURY DEPARTMENT, BUREAU OF THE MINT.

Increase in Scientific Terminology.

Again, the requirements of Commerce, of the Manufacturing Industries, of the Arts, of Finance, of Insurance—life, fire, and

marine—as well as of Agriculture, Engineering, Eugenics, Political Economy, Sociology, etc., have made the coinage of many new words imperative. Political life, especially in the United States, has fashioned for itself new words, meanings, or phrases, many of which have passed into general use.

Commercial and Industrial Terms.

The total number of proper names included in the present edition is approximately 65,000, of which the personal and biographical entries aggregate 16,000, and the geographical names more than 30,000. Biblical names, mythological names, and bibliographical entries are all given with equal completeness.

Proper Names Included.

The selection of the biographical names included was made with great care after a complete survey of the names found in the leading encyclopedias of biography—American, English, French, German, Austrian, Spanish, Italian, Russian, Danish, etc.—and in the latest dictionaries of biography and annual handbooks.

Bibliographical names are followed, where necessary, by the name of the author and the title of the book in which they occur. In order that this department may serve as a guide to the characters and contents of the principal works of fiction, brief descriptions of the personages considered are given.

The geographic names selected embrace, in general, places of historic, literary, political, or scientific interest. The purpose is to supply such information as (1) the areas of continents; (2) the areas, capitals, and populations of countries, provinces, and states; (3) the areas and capitals of amts, counties, departments, kens, vilayets, etc.; (4) the geographic position of boroughs, cities, towns, and villages, together with any important fact or event connected with them; (5) the heights of mountains; (6) the lengths of rivers; (7) the sizes of lakes, etc. For greater convenience in keeping abreast with the publications of the censuses of various European countries, the NEW STANDARD DICTIONARY prints statistics of population separately. (See STATISTICS OF POPULATION OF THE WORLD, pp. 2792–2808.)

Geographic Names.

II. SPELLING.

In the spelling of words this dictionary generally prefers the simpler form when two ways of spelling the same word are used by acknowledged authorities. In its efforts to help in the simplification of spelling it is conservative, while favoring progress along the lines of reform agreed upon almost unanimously by the leading philologists of America and England. The forms adopted and officially recommended for use by the AMERICAN PHILOLOGICAL ASSOCIATION, the AMERICAN SPELLING REFORM ASSOCIATION, and the SIMPLIFIED SPELLING BOARD are given place, braced together under the usual forms, the first being indicated by ᴾ or PHIL. SOC., and the last by ˢ or S. S. printed after the word. Where usage in England differs from that in America, as in the spelling of *meter* (metre), *theater* (theatre), *favor* (favour), *labor* (labour), *surprize* (surprise), etc., the form preferred in England is also given. In all words fully Anglicized "e" is preferred in this work to the diphthongs "æ" and "œ," as in *e[æ]sthetics, fe[æ]tus, home[æ]opathy*. In cases, however, where diphthongal forms are still largely or prevailingly used in current literature, the two forms, in deference to usage, have been braced together in vocabulary place. In general, and in harmony with modern practise, the use of the dieresis is discontinued.

Simpler Forms Preferred.

Simplified Spelling.

To indicate promptly and clearly the correct way of writing words derived from proper names, these words, as well as all proper names, are printed with initial capital letters. In the treatment of the vocabulary of the sciences the aim has been to follow the system of spelling and capitalization recognized as authoritative in each science.

Capitalization of Proper Names, etc.

The decisions of the UNITED STATES GEOGRAPHIC BOARD, of the GEOGRAPHIC BOARD OF CANADA, and of the CENSUS OF INDIA, are followed in the spelling of American, Canadian, and Indian names respectively. The authority followed for the British Isles is the CENSUS OF THE UNITED KINGDOM.

In order to supply a standard as well as to assist in the correction of existing confusion in both literary and lexicographic usage, the division of words into syllables in writing and printing and the compounding of words have been reduced to a logical system by the foremost expert on these subjects in the United States. As a means of distinguishing a hyphenated compound from a syllabicated word, the German double hyphen is used for the first and an ordinary single hyphen for the second. Thus, in *an''ti-A-mer'i-can*, the double hyphen indicates that a hyphen is to be retained after the *anti* in ordinary writing or printing where the syllabic single hyphens (with the accents) disappear, so that the word will be regularly written or printed as *anti-American*. See THE DIVISION OF WORDS INTO SYLLABLES, p. xxix, 12, and COMPOUND WORDS, pp. xxx, xxxi.

Compounding and Syllabication of Words.

III. PRONUNCIATION.

The pronunciations in this dictionary are, in the main, based on the principles laid down in previous editions of this work by the late Prof. FRANCIS A. MARCH, LL.D. Words whose pronunciations are disputed were referred to an International Advisory Committee of experts in English speech.

In respelling words for pronunciation in the present work two keys are used, but quite independently of each other. Each word is respelled first (Key 1) in the Revised Scientific (or National Education Association) Alphabet, and second (Key 2) in what is commonly called the "text-book key." The use of two systems of notation is necessary during the period of transition from the second or old key to the new.

Keys to Pronunciation.

Of these the Revised Scientific Alphabet (Key 1) is a simple, logical system, in which the aim is to have one sign for each sound, and one sound for each sign, and in which only *one* diacritical mark is used—the macron or mark of length. Its basic principle, now adopted by many learned societies throughout the world, is the use of the fundamental vowel-letters in their Continental or so-called Roman values.

The second key (Key 2), long used in text-books and in the older dictionaries, preserves the letters of the regular spelling, but attempts to discriminate their sounds by various diacritical marks. The first key may be characterized as the more scientific, while the second is less exact and more cumbersome. For full explanation of these keys, see SPELLING AND PRONUNCIATION, pp. xxiii to xxix.

As a rule, pronunciation is indicated for every word in the dictionary by respelling the word in full phonetically, but it is occasionally shown by merely separating the syllables by hyphens and accent-marks. The endeavor has been to omit nothing that any one can ever need, and respellings are often given which may not be necessary. In this respect, as in others, it has been held preferable to include too much rather than too little. If a word has two or more pronunciations, the first pronunciation given is the one preferred by this dictionary.

Amount of Pronunciation Included.

Exceptions to the respelling of words in this work are as follows:

1. Many obsolete words and some words almost obsolete are not respelled, as they are now of little importance in the spoken language.

2. Words beginning with combining forms (as *aero-, electro-*) are often given in groups and not respelled.

3. Respellings are omitted after some words with prefixes like *dis-, mis-, out-, over-, un-*, when the derivative is almost or only a nonce-word, as *disimprison;* but each prefix widely used is followed by the reference, "For respellings not given below, see the primitive words." Full respelling is given, however, in every case in which it is likely to be needed, as with *disband, disinherit, dismantle, misuse, output, overthrow, unknown*.

Where Respellings Are Omitted.

4. In a few instances, mainly of proper names, the respelling of a first element is given only with the first word in a series containing it, as in Biblical names with *Beth-*.

Correctness in pronunciation, like correctness in diction, depends upon the consensus of usage among educated people. There are many words in the language regarding the correct pronunciation of which expert orthoepists and scholars as well as dictionaries do not agree. The correctness of English pronunciation should obviously be determined by the best and widest usage among the English-speaking peoples. Systematic endeavor has been made in this work to ascer-

Disputed Pronunciations.

tain the consensus of usage throughout the English-speaking world, by selecting from scholars and professors of English in all the great centers of English civilization an Advisory Committee of twenty-five persons, to serve as witnesses to give testimony regarding the usage in those centers, and as a jury to decide upon rival claims in doubtful cases. Disputed pronunciations have been referred to this Advisory Committee, thus composed of prominent philologists in American, British, Canadian, Australian, South-African, and East-Indian educational institutions. The decisions reached by this committee are recorded, together with the preferences of each of the leading dictionaries, in a separate section. This section is referred to by the arbitrary symbol (xiii), which is printed after the respelling of nearly every vocabulary term concerning the pronunciation of which there is any doubt.

Committee on Disputed Pronunciations.

IV. THE DEFINITIONS.

The plan of defining by definitive statement rather than by synonym, stedfastly followed in the first edition of the STANDARD, has been even more carefully carried out in the present work. The aim has been to produce definitions that are clear, concise, and exact. Definitions are expressed briefly when few words are sufficient, but encyclopedic treatment is also employed when this is material to a correct understanding of the meaning or importance of the word.

Defining by Definitive Statement.

Wherever practicable, the definitive statement is followed by some illustrative phrase or phrases, showing how the word, in the sense defined, may be used in connection with other words. Thus, after the first definition of the adjective *auxiliary* will be found the following illustrative phrases: "as, *auxiliary* troops; an *auxiliary* means."

Illustrative Phrases.

If a word has two or more meanings, the most common meaning has been given first; that is, preference is given to the order of usage over the historical order. The average man (speaking in a general way) goes to a dictionary to find one or more of three things about a word: (1) Its correct spelling; (2) its correct pronunciation; (3) its most common *present* meaning. It has been the purpose to enable him to get this information with ease and certainty; and hence nothing has been permitted to stand between the vocabulary word and its most obvious or important *current* meaning. This reverses the usual or historical method followed by lexicographers, which is to give first the etymology of the word; next, the meaning nearest the root meaning, often obsolete; and then the subsequent meanings, the present or current meaning often coming last. *But this last meaning is precisely the one most commonly sought after.* The average man is thus embarrassed and confused. It was thought better not to follow a system simply because it is logically or philosophically correct, if, practically, it hinders rather than helps the inquirer. Precedent should give way to convenience.

The Most Common Meanings Given First.

Special pains have been taken to make the definitions given in this work authoritative by presenting exact and recent meanings and distinctions, by giving a definite clue to the great departments and divisions of knowledge, to which special meanings are referred, and by making the general definitions comprehensive and exhaustive.

Exactness in Definition.

Each set of words was defined or submitted to and passed upon by a specialist in the science, art, or branch of knowledge in which the terms are included. The absolute necessity for submitting each definition, if it is to be accepted as authoritative, to an expert in its proper department is so self-evident as to need none but passing reference. The ablest specialists that could be secured were engaged for this work, the list of whose names runs up into the hundreds; among them may be especially mentioned LORD AVEBURY, FRANK BAKER, EDWARD EMERSON BARNARD, Sir GEORGE BIRDWOOD, Sir DAVID BRUCE, FRANK W. CLARKE, PHILANDER P. CLAXTON, T. L. COMPARETTE, ANDREW S. DRAPER, HENRY VAN DYKE, HENRY GANNETT, THEODORE N. GILL, THEODORE W. HUNT, DOUGLAS HYDE, FRANK H. KNOWLTON, GEORGE T. LADD, EMANUEL LASKER, JOHN PENTLAND MAHAFFY, JAMES BRANDER MATTHEWS, Sir HIRAM MAXIM, WILLIAM H. MAXWELL, S. M. MITRA, WILLIS L. MOORE, ROBERT E. PEARY, EARL ROBERTS, SLATIN PASHA, GEORGE OTIS SMITH, FRANCIS HOVEY STODDARD, ALICE VINTON WAITE, HARVEY W. WILEY, DEAN C. WORCESTER, ORVILLE WRIGHT, WU TING FANG, and ELLA FLAGG YOUNG.

Employment of Specialists.

Some Noteworthy Names.

Anthropology is defined under its two great divisions of *Physical* and *Cultural Anthropology*, with an extensive finding-list of subordinate terms and of the sciences that minister to each branch of the subject. At *man*, with its numerous derivatives and compounds, is given also a full-page plate of typical heads, illustrating the various *Race-Types of Mankind*. In the branches of *Archeology* and *Antiquities* may be mentioned many comprehensive definitions, as those of the *Code of Hammurabi, cromlech, dolmen, hieroglyphic, iconomatic,* (with an illustration of a typical iconomatic inscription) *Minoan, Moabite stone, mound* (with a description of the work of the mound-builders under *Indian mound*), *Nestorian tablet, pyramid* (showing the dimensions and exterior and interior plan of the great pyramid at Ghizeh), *Rosetta stone,* etc.

Anthropology, Archeology and Antiquities.

Architecture and Art have received definitions as full as possible within the space-limitations imposed, frequent cross-references and illustrations being added with a view to consolidating the whole. Representative definitions will be found at *Arabian, arch, architecture* (with finding-list), *buttress, Byzantine, capital, column, frieze, Henri-Deux, hypostyle, Norman, perpendicular, pointed, rafter, Renaissance, rock-temple,* and *roof.* In the field of art the definitions will be found to be concise, yet illuminating. As typical examples may be cited those at *art* (with encyclopedic note), *Babylonian school, chiaroscuro, Flemish, impressionism, perspective, Pre-raffaelitism, relief, Renaissance painting, school of painting,* and *sculpture.* The illustrations of famous paintings, etc., are referred to under PICTORIAL ILLUSTRATIONS.

Architecture and Art.

In the Departments of Construction, Engineering, Handicraft, and Mechanical terms in general, the Editors had the advantage of consulting CHARLES ALLEN MUNN, A.B., editor of *The Scientific American*, whose specialized knowledge, assistance, and suggestions proved of immeasurable value. The aim was to cover civil and mechanical engineering and their allied trades as completely as is possible in a popular dictionary. No effort has been spared to make the definitions at once comprehensive and illuminating, and in all explanatory matter, from that covering the most complex of our modern mechanical triumphs to the description of common household tools, to use language free from unnecessary technicalities. For example, the definitions of *chassis, engine, locomotive, marine engine, motor-boat,* the treatment of *automobile* under *motor-vehicle*, and the extended definitions and descriptions under *printing-press* may be cited, with their illustrations. The illustrations under *locomotive* and *printing-press* are particularly noteworthy and show at a glance the state of perfection each department of manufacture has attained. Under *wire* will be found a very complete treatment of the different varieties and a table of *gages*, with diagrams of the United States and British standard *wire-gages*. At *watch* is shown the interior of an American open-faced watch, with the various portions of the works explained and described individually, and a complete list of parts given.

Engineering, Industrial Arts, Mechanical Appliances, etc.

Modern *steel-* and *iron-construction* are fully covered under *construction*, with a full-page plate, and under *concrete* are given a definition and an illustration of a monolithic concrete house, furnished by THOMAS A. EDISON. At *viaduct* are a comprehensive definition and an illustration, and at *bridge* are given definitions and illustrations of the principal types of bridge-construction. Under *Panama Canal* are furnished the principal facts and statistics relative to this great engineering and constructive achievement, with a profile section of the canal showing the location and elevation of the locks.

Handicraft terms have been gathered with great completeness, and in most cases will be found grouped under the different trade-names, tho the more important of them are defined in vocabulary place. There are many thousands of handicraft terms; as, among plumbers, *dummy, eel-pump, putty-joint, riser;* among house-builders, *mouse, deadening;* in the manufacture of

Handicrafts and Trades.

brick, *clapper, cuckhold, Dutch clinker, unsoiling.* Such terms are used particularly in builders' specifications, in handbooks, in commercial and news reports, in contracts, in court-rooms, and in conversation, and they are finding their way more and more into literature. Such common mechanical aids as the *belt, pulley, wedge,* and *wheel* are exhaustively covered, while such tools as *adz, ax, chisel, drill, file, hammer, saw,* etc., are described with all their special modifications.

Aviation and Aeronautics.

Aviation and Aeronautics have been very fully covered under the personal supervision of ORVILLE WRIGHT, with the aid of many illustrative diagrams, among which may be mentioned the full-page plates at *aeronautics* and *aviation*, with the definitions and finding-lists under these words, and the definitions of such technical terms as *aeroplane, biplane, dirigible, helicopter, hydroaeroplane, monoplane, volplane,* etc., which afford in brief a complete exposition of the art of aviation as it exists to-day.

Medicine and Allied Sciences.

In selecting the terms in Medicine, Surgery, and their allied sciences, Anatomy, Physiology, Pathology, and Bacteriology, an attempt was made to determine: (1) whether the term is in actual use or has been in use during a period that would naturally bring it under the notice of a general reader; (2) whether it is likely to remain in use for an appreciable time. It is believed that the vocabulary will be found unusually full in this respect. Representative definitions in these branches are those at *medicine, eye* (with illustration of the inner structure of the eye), *muscular system* (with illustration showing location of the principal muscles), *nerve, nervous system* (with front view of the human nervous system), *arterial system* (with chart showing the circulatory system of the body as a whole and of the principal organs respectively), *antidote* (giving a list of the proper antidotes to be used in the more common cases of poisoning), *skeleton, craniometry* (with tables of craniometrical points, lines, planes, angles, and indexes), *brain* (with a view of the median section of the human brain), *heart* (with encyclopedic note and illustration), *blood, circulation of the blood* (with explanatory note and illustration), *fever* (characterizing various types), *lung, cell, epithelium, germ, germ-layer, metabolism, phthisis, tuberculosis, cancer, tumor, surgery, bone* (with a list and illustration of the bones in the human body). Under *bacteriology* are included a full-page illustration in colors of the forms of *bacteria* and a full description (under *culture*) of the various methods for their propagation, and at *Roentgen Rays* are given two full-page plates showing apparatus and radiographs of different parts of the body, outlining the anatomical structure, as well as a comprehensive definition of this form of radiant energy.

Law and Legal Decisions.

The definition of *law* is very full and complete. Under this are given clear definitions of *civil, common,* and *constitutional law, martial law, natural law, positive law, statute law,* etc. Then, under *act* will be found an extensive list of the most important acts of English and United States legal history, as the *Act of Elizabeth*, the *Act of Rescission*, the *Carey Act* (or *Desert Act*), the *Morrill Act*, the *Sherman Act*, etc., with dates and general terms of each. Some important *acts*, as the *Act of Settlement, Act of Uniformity*, etc., are listed with reference to the second element, as *settlement, uniformity*, etc., where the definition is fully given. Turning then to *case*, there will be found a long array of the most celebrated or important *cases* decided under English or American law, as the *American Tobacco Company case*, the *bank-tax case*, the *Northern Securities case*, the *Standard Oil case*, etc., under United States Law; *Bradlaugh's case, Bushnell's case, McNaghten's case*, etc., under English Law; the *McLeod case*, under International Law, etc.

It should be mentioned here that under *law* is also given a very extensive definitive list of the various uniformities recognized as *laws* in science, mathematics, language, etc.; as, *Ampere's laws, Arago's law, Coulomb's law, Grimm's law, Malthus's law, Mendel's law*, and numerous others.

Language and Grammar.

In the Department of Language the word *language* itself has a very comprehensive definition, showing how languages are grouped according to structure, etc., with which is associated a Table of the *Principal Languages of the World*, based on T. G. TUCKER'S *Introduction to the Natural History of Language*, in which the various languages are grouped under divisions, subfamilies, and branches, and details are given of the principal characteristics, development, and regional scope of each. At *alphabet* is an encyclopedic article relative to the origin of the alphabet, and under *Aryan, Indo-Chinese*, and *Indo-European* are valuable definitions. In the department of *grammar* proper may be noted the definition of *grammar*, and those at *adjective, case, conjugation, noun, plural* (giving rules for the formation of plurals of English words), and *pronoun*.

Psychology and Philosophy.

In defining the terms used in Psychology — including Psychophysics and Experimental and Physiological Psychology — and in Philosophy — including Metaphysics, Ethics, and much of Logic, Esthetics, and Theology — great pains were taken to overcome, so far as possible, the difficulties inhering in the very nature of the conceptions which it is intended to cover by these terms. Of these difficulties, perhaps the chief consists in the largely abstract character of the conceptions themselves.

Another difficulty arises from the fact that these branches of learning so largely make use of common words, but with specialized meaning. Such words as *Consciousness, Thought, Feeling, Pleasure, Pain* are among the most difficult of all words to define exactly. Even more conspicuously is this true of such words as *Soul, Mind, Relation, Time*, and *Space* in their metaphysical signification; while such purely negative conceptions as the *Unconscious*, the *Unknowable*, the *Unrelated*, and certain uses of the words *Absolute, Infinite*, etc., do not, properly speaking, admit of definition at all. The endeavor has been to give in each case the best definition consistent with the limitations of the subject.

In the consideration of new psychological terms the standing of the originator of the new word, the stress of need for it, the amount of acceptance which it has already gained, and the importance of the distinctions, or the alleged discovery, or the new thought, which it is intended to mark out, must all be taken into account. The main topics in this department have been treated in an encyclopedic manner. Among these may be cited those of *philosophy* and *psychology*, which are especially full, and those under *attention, being, consciousness, desire, ego, fatigue, Hegelianism, idea, idealism, Kantianism, method* (under which head many methods in these departments are defined), *mind, Platonism, reaction, reflection*, and *self*.

Mathematics and Physics.

In the Departments of Mathematics and Physics, the list of terms will be found to include everything of value required by a popular dictionary. In writing the definitions designed for general use the aim was to make them clear to the ordinary reader and to avoid formulas and technical terminology wherever possible. The dominant idea governing the work was that it was designed for a general dictionary—not a technical cyclopedia. Occasional terms so very simple that it seemed useless to define them for the dictionary-user of ordinary intelligence have been omitted.

Astronomy.

Among the more important astronomical definitions, all of which have been covered very fully, may be cited those at *astronomy* (which has a finding-list of the more important terms in the science), *comet, constellation, satellite*, and *star* (all of which have Tables associated with them), *aurora, eclipse, Leonid, Perseid, precession*, and the names of the planets, including the *earth*, together with the *sun* and *moon*, all of which have been treated in a statistical manner after reference to the most recent discoveries. Compare also the definition of *telescope*, describing and classifying the different classes, and the full treatment of the *spectroscope*.

Electricity and Electrical Engineering.

Definitions in the Department of Electrical Engineering are based, so far as possible, upon the Standardization Rules of the AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS. Terms relating to modern electrical theory and the multifarious manifestations of the existence of electrons were defined only after a considera-

tion of the most recently published results of investigation by the Cambridge school of physicists. The more common terms in both Theoretical and Applied Electricity are defined so as to include those meanings which are commonly ascribed to them in standard text-books and in representative electrical periodicals. A number of words have been excluded because they are not currently accepted, because they are based upon a misunderstanding of the underlying theory of facts, because they are misleading, or because their use has been inhibited by conventional scientific agreement.

The industrial applications of Electricity in the many practical activities it controls have been treated with insistence upon scientific accuracy joined with the utmost attainable simplicity, to make them clear, as far as the subject permits, to the non-technical reader. Here may be specified *telephone* (explaining both the ordinary Manual System and the Automatic, now largely used in the Western United States and elsewhere), *telegraph*, and *wireless telegraphy*. Illustrations of apparatus used are supplied especially in the full-page plates of *Wireless Telegraphy* and *Wireless Telephony*. Electric Traction and Electric Lighting are very fully treated.

Music and Musical Instruments.

Great care has been exercised in the treatment of Music and Musical Instruments, many special points receiving encyclopedic treatment, as in the definitions of *counterpoint, harmony, key, mode, music, neume, notation, note, opera, orchestra, pitch, staff*, and *tone*. Under *opera* is also given a list of the more important operas, with their composers and dates of production. The different instruments are comprehensively treated, as in the cases of *harp, organ*, and *pianoforte*, and a full-page plate of musical instruments is given at *musical*, and at *national* a four-page insert appears, showing the opening bars, original words, and English translation of many *National* and *Patriotic Songs* of the world.

Naval, Military, and Nautical Expressions.

Naval, Military, and Nautical Expressions have been treated very fully, much care being taken to differentiate between the United States and foreign usages and to give the latest information, whenever possible, covering new developments in the various branches. Illustrations have been used profusely, as in the full-page plates at *ship, steamship* (showing the "Imperator," a representative modern ocean passenger-steamer, and a number of typical steam-vessels), and at *war-ship*, giving views of many representative vessels of the American and British navies. Among the definitions, which are full, several being illustrated by cuts, may be mentioned those at *army, battle-ship, cannon, cruiser, dreadnaught, epaulet, fortification, gun, knot, navy, propeller, quartermaster, semaphore, squadron, steamboat, submarine*, and *torpedo*.

Games and Sports.

The Department of Games has been very fully covered, illustrative diagrams being given wherever practicable. Thus, plans of the field in each case, together with a finding-list of the principal terms used in the game, are given under *baseball, court-tennis, cricket, football* (diagrams of both American and Association fields), *lacrosse* and *lawn-tennis*. Under *golf* (all terms under which head were passed upon by W. J. Travis, sometime champion of the world) is given a finding-list and an illustration of different styles of clubs; under *boxing, fencing*, and *single-stick* are shown the various positions of attack and defense; under *swimming* the different strokes are illustrated, as well as the proper positions to be taken in effecting a rescue; under *wrestling* are shown the various holds and falls, etc. *Chess* (passed upon by Emanuel Lasker, champion of the world) and *checkers* or *drafts* are exhaustively covered, with all their terms, the moves and the principal openings being given in each case, and under *bridge* is given a table showing the method of scoring and a finding-list of the principal terms.

Biology.

For the Department of Biology the terms presented were gathered from an extensive reading of recent biological literature, and the additions reflect a profound change in the nature of the activities of biologists at the present time. Whereas, a few years ago, the additions came largely from the systematists, now the new terms represent conceptions in Morphology, Physiology, Bacteriology, and Experimental Medicine. Improved technique and refinement of observation react mutually with new hypotheses and new theories. The result is that investigators are prone to coin new terms to express a theory believed to be warranted by the partial evidence before them. Such terms as remain unnoticed by their contemporaries are excluded; such as have been widely quoted are included and follow the definition given by the author in his original paper, altho some of these have already become rare. On the other hand, care has been taken to make as complete as possible the list of terms and the definitions concerning technical operations or results.

Botany.

In the Botanical sciences unprecedented progress has been made in recent years. Ecology, Histology, Taxonomy, Cytology, and Phytogeography have been practically reconstituted. Extensive investigations into all these subjects have impressed new meanings on old terms and have necessitated the coinage of hundreds of new terms. The terminology of Botany required complete recasting through the action of the International Conference of Botanists held in Vienna in 1905, thus making it necessary to rewrite most of the definitions in this science. Economic Forestry has a terminology peculiar but indispensable. Thus the scientific vocabulary of the vegetable kingdom will be found to have greatly increased in this new work.

The vegetable kingdom comprises over 200,000 species. To compress botanical terminology within the limits of a general dictionary, some method of exclusion must be adopted. All words were judged on their individual merits. But terms interesting only historically, or ephemeral words and phrases, have been omitted.

While full provision is made for the reasonable needs of the scientist, the stronger claims of the general reader are not overlooked. Vernacular plant-names, with their synonyms and the definitions in horticulture and floriculture, will be found unusually numerous and full. The leaves and fruit of trees are pictured in connection with the appropriate definitions, as at *beech, birch, chinkapin, maple, walnut*, etc., and a full-page plate in colors of *Typical Woods* further illustrates this topic. *Flowers* are very fully treated under their common as well as under their botanical names (see *lily, rose, violet*, etc.), and two full-page plates in which *Flowers, Wild* and *Cultivated*, are delineated in half-tone engraving.

For years to come the exports of the island possessions of the United States must be mainly agricultural. Special effort was made to include in this work the native names of all economically valuable plants cultivated in Porto Rico, Guam, Hawaii, and the Philippines. Definitions are also given of most of the tropical plants now naturalized in California, Florida, and the southwestern United States.

Agriculture.

Under Agriculture prominent terms are extensively listed, supplying the material for cross-references. Lists of various varieties of agricultural products are very extensive (see *apple, coffee, cotton, grape, orange* [note the description of the *seedless orange* and the method of its propagation], *peach, pear, plum, tea, tobacco*, etc.). Agricultural implements are very fully treated, as at *harrow, hoe, mower, picker, plow, reaping-machine*, and *threshing-machine*, and a full-page plate of Agricultural Machinery is given. Diseases of plants, with the insects or other agents producing them, are treated (as at *boll-weevil, phylloxera*, etc.). Varieties of domestic animals are listed and described. (See *cattle, dog, fowl, goat, horse, sheep, swine*, etc.), with illustrative plates of typical specimens. In the treatment of the names of domestic and some other animals the *female* is named under the definition of the *male*, thus serving both as antonym and as remembrancer.

Zoology and Its Branches.

In the Department of Zoology the rules of inclusion and exclusion followed in the first edition were followed also in this, with slight modifications to permit of the recording of terms now common in current literature. Changes in scientific nomenclature of zoological terms that have been suggested but not yet universally accepted are not followed. Through discoveries, experiments, and investigations by special experts attached to the United States Department of Agriculture, the range of the Animal Kingdom has been greatly widened, and the information thus gleaned has been made available to the Editors. In addition, the Editor of the department himself contributed a large number of definitions of new

terms now current among the English-speaking peoples of Cuba, Guam, Porto Rico, Hawaii, and the Philippine Islands. In this department material assistance was rendered by Mr. WILLIAM CHURCHILL, sometime United States Consul-General at Samoa and Tonga, who also contributed many Samoan, Melanesian, and Polynesian terms current in English literature. Here, also, the practical and popular element has been given place beside the scientific. The various animals, wild and tame, have been defined and pictured with great fulness and clearness, and with especial care to discriminate the different varieties by locality and characteristics, as the *Arabian* and the *Bactrian camel*, etc. (See *Bear*, *Camel*, *Cat*, *Lion*, *Tiger*, etc.) Note also the domestic animals referred to in the section AGRICULTURE, above. Birds of all varieties are defined and pictured under their familiar names (with addition of their scientific classification), and a full-page plate of *Birds* is added.

Entomology and Ichthyology.

In the branches of Entomology and Ichthyology the definitions will be found in harmony with accepted modern scholarship and the results of scientific and expert investigation. The practical importance of many entomological subjects has been held constantly in mind. (See *Boll-weevil*, *Boll-worm*, *Browntail*, *Gipsy-moth*, *Mosquito*, etc.) Attention may here be called to the full-page plate of *Butterflies and Moths of Europe and America*, with the popular and the scientific name of each. In the branch of Ichthyology the definition of *fish* has been treated encyclopedically, and a finding-list of the principal fishes is given in connection with it, together with an illustration showing the skeletal structure of a fish. Among other noteworthy definitions are those at *cod*, *cuttlefish*, *dolphin*, *lobster*, *porpoise*, *ray*, *salmon*, and *shark*.

Chemistry.

Of Chemical terms and definitions submitted, a few were eliminated as obsolete or unimportant; the majority, however, were carefully considered as to proper chemical phraseology, questions of fact, and correctness of formulation as regards composition. To this end resort was constantly had to the latest available literature and original papers. All terms submitted received a second checking, both as regards questions of fact and for the detection of typographical errors, that they might correspond to the latest facts and present day conceptions. The Table of Chemical Elements has been expanded to meet the latest discoveries, so that it now contains 81 elements, giving with each the *derivation* of the name, the chemical *symbol* used in formulas, etc., the *atomic weight*, the *specific gravity*, the *fusing-* or *melting-point*, the *valence*, the *date when discovered*, the *name of the discoverer*, and a compendious statement of *where and how found*. In connection with this a very full statement relative to what is termed the *periodic law* underlying the elements has been given under *periodic*, together with a table of the Periodic System, indicating the method under which the elements have been grouped according to this system.

Geology.

In the Department of Geology a systematic revision was made of all the terms appearing in previous editions, in order to make all descriptive matter conform to the latest discoveries and conclusions of eminent geologists throughout the world. By this means it is hoped that the geological definitions as a whole will be found to be entirely comprehensible by a layman and yet sufficiently thorough to afford reliable information for the student. In the various branches consultations were held with leading experts about all doubtful and disputed terms, as, for instance, with Prof. CHARLES PALACHE, of Harvard University, regarding crystallography, in the effort to eliminate as far as possible the errors found in various works of reference upon this subject. The definitions of many recently proposed terms were submitted to their authors, who passed upon them personally, and no term was admitted that is not recognized as authoritative by expert usage.

The double-page Table of Geological History was prepared with the utmost pains, after consultation with various geologists of the UNITED STATES GEOLOGICAL SURVEY, and in accordance with the views expressed by a number of other eminent geologists, who have carefully discussed the various details of its system and scope. It is believed to be considerably in advance of anything of a similar nature heretofore published in the English language as regards the stratigraphy of America and Europe, being, as it is, the first serious effort to collate in a comprehensive form the geological growth of the two continents in such a shape as to be readily accessible to, and available for use by, the general reader. In its preparation no one authority was followed throughout, but the eclectic plan was adopted of consulting all available good authorities and deciding doubtful cases according to the preponderance of evidence. Where matters are extremely uncertain a tentative adherence is given to the more convincing evidence, and a note directs attention to the fact that the question still remains unsettled. It is hoped that this table, by its fulness, its scientific accuracy, and its inclusion of the latest geological information, may be of material service to all who consult it.

A Unique Geological Chart.

Full as the many specifications above given may appear, they are but pointers to the wealth of information to be found by the reader who will follow any subject with intelligent study from definition to definition throughout the work.

V. ETYMOLOGY.

The same general plan of concise treatment which characterized the work of this department in the first edition of the STANDARD DICTIONARY, is followed in the present work. The etymologies, which were prepared under the direction of Prof. FRANCIS A. MARCH, Ph.D., trace the meaning of any given word back in a direct line, avoiding mere guesses at derivation and the temptation to make extended incursions into cognate languages. The advantages of giving, along with the English word, the word similar to it in sound, form, or idea, in the Dutch, French, German, Italian, Spanish, or Swedish, have not appeared sufficient to justify the use of so much valuable space. Bearing in mind that a popular dictionary should aim to provide the information it contains in easily accessible form, words derived from languages whose alphabets differ in the forms of their letters from those of the Roman letters, as the Arabic, Greek, Hebrew, Sanskrit, etc., are transliterated so as to be easily read by any one not familiar with the words in their native dress.

Conservative Methods Followed.

VI. AIDS TO CONSULTATION.

The main purpose kept in view throughout this work has been to present its contents in such a way that the reader shall always have *direct* and *easy access* to the information he seeks. Therefore the plan of placing all proper names, whether Biblical, classical, or personal, geographical or bibliographical, in their alphabetical places in the main vocabulary was adopted, so that the reader may find the data he requires as readily and expeditiously as possible. This method is a distinct advance upon that formerly in vogue of giving in several separate alphabetical groups various lists of proper names, classified as Bible, bibliographical, Greek and Roman, biographical, and geographical, often compelling the reader to turn to a number of these alphabetical groups, according to the plan of the work, before finding the information sought. In this edition of the STANDARD DICTIONARY the inquirer has to look for the term that he seeks in *but one place*—a detail in which this work differs from all its predecessors. It is believed that the method here introduced—*every word in its own place throughout the alphabet*, no matter what the word may be—will so commend itself by its simplicity and convenience that the only question will be why it has not always been employed.

One Alphabetical Order Throughout.

Proper Names in Alphabetical Place.

One Word One Place.

In order that the reader who wishes to trace the relation of terms in the sciences, or in other cognate subjects, to one another may do so with ease, cross-references are made between correlated terms in such a way that a complete survey of the science or subject is afforded. By a system of grouping terms, which originated with the first edition of this work, the facts pertaining to the subjects grouped are not only made easily accessible, but also permit of more comprehensive treatment. An examination of the text under such headings as are given below will illustrate the system. *Abbreviations* and *degrees* are distributed in alphabetical place throughout the text, but the

Grouping and Correlation.

chief of these are also grouped under the parent term. The names of *authors, battles, coins, colors, constellations, dyes, elements, flowers, fruits, grasses, languages, measures, orders of merit, precious stones, stocks and tribes, stars, typical shades* and *hues* (see SPECTRUM), *weights*, etc., are tabulated and, in addition, all the more important of them are defined in their alphabetical places in the vocabulary. Lists of the more common *Americanisms* and *Briticisms* in use are grouped, for the first time in a popular dictionary, under the one or the other of these terms, but are defined in their respective places in the book. This plan of classifying terms under a general group-name serves a double purpose. It supplies the means of comparison and serves as a word-remembrancer or guide to the finding of some forgotten word of which the parent term is known. Yet in all such groups the method of *one alphabetical order throughout* will be found to have been steadily maintained.

Certain self-explanatory terms, or words whose meaning is too easily understood to require definition, are grouped under such prefixes as *in-, inter-, un-*, prepositions like *under*, etc. When necessary the reader is reminded of these groups where they occur by specific reference given at the foot of the page.

Another exclusive feature of this work, adopted for the benefit of those seeking the pronunciation of words, is the placing of the key-words indicating the systems of pronunciation used in this dictionary at the *top of the page* instead of at the bottom, enabling the student to follow the key-line with increased facility.

Positions of Keys for Pronunciation.

The key-words at the top of the pages present to the reader the first defined term on the left-hand page and the last defined term on the right-hand page. This enables any one who consults the book to see at a glance whether the word sought occurs upon either of the two facing pages to which he may turn.

Key-words for Consultation.

Thus, if one is seeking the word *livid*, and opens to pages 1446–1447, he will find in the upper corner of each of these two pages the key-words { *literal* / *little* }, showing instantly that *livid* can not be there contained. No searching down the columns is necessary. One has simply to turn the page. Then, in either upper corner of pages 1448–1449 will be found the key-words { *little* / *Livistonia* }, showing that somewhere within the limits of those two pages *livid* will surely be found. This system will, it is believed, greatly facilitate the rapid location of any word desired.

VII. SYNONYMS AND ANTONYMS.

A characteristic feature of this work is its plan of presenting Synonyms and Antonyms. This department, which has been largely amplified, and now embraces 7,500 separate lists and discussions of more than 23,000 synonymous terms, not only gives lists of synonyms, but in brief paragraphs of comparison undertakes to bring out simply and clearly the finer, nicer distinctions between words similar in meaning, especially with reference to established usage at the present day.

Fine Distinctions Important.

The facts, principles, and plan of this portion of the work are thus stated by the Editor of this department:

> The English, as a composite language, has a large number of words, especially those of Latin and French origin, that were originally almost or quite identical in meaning with corresponding Saxon words. With the advance of the language these have been steadily differentiated in meaning or use, until it has become exceedingly difficult to find any two words that are not distinct from each other at some point or in some respect. This process, still actively going on, is constantly enriching the language, enabling the writer or speaker to find an exact term to express almost any shade of thought as no other word could quite so perfectly express it.
>
> In this work, therefore, the term *synonyms* has been used in a general sense to denote pairs or groups of words similar in meaning or associated in use, and has even been extended in some instances to include the discussion in a single article of contrasted terms. Thus such words as *induction* and *deduction*, *infection* and *contagion*, *imagination* and *fancy* can be more fully defined by comparison and contrast than would be possible by the treatment of each term separately.
>
> The method of discrimination constantly followed has been *to take in each group some one word* whose meaning is well known or capable of being succinctly stated, *and to compare similar and dissimilar words with this central term*, thus avoiding the vagueness often produced by easy sliding from synonym to synonym, while at the same time preserving the unity of the group.
>
> Where a word has accepted usage in more than one prominent sense, synonyms have been given at one point for a single signification, and references made to other points for treatment of other meanings. In accordance with the general plan of the work, the synonyms have been held closely to present popular usage. Many elegant archaisms and recondite literary uses of interest to scholars have been left to the definitions and dropped from the synonyms.

Synonym discussion gives *definition by comparison*, each word better understood and better remembered because of its differentiation from others. One who understands the art of selection can choose promptly from any group the very word needed in a particular case, thus giving to a single sentence an instant definiteness and conclusiveness such as could not be attained by a paragraph of explanation.

The interchangeableness of words is also an important consideration. Frequent use of a single word in one sentence or paragraph gives the effect of repetitiousness, and hence wearisomeness, of thought. This is often instantly relieved by the substitution of an interchangeable word. To make such interchange discreetly and effectively, one must know the exact content of each of the words compared—knowledge which only the adequate study of synonyms can impart.

Antonyms, or the opposite meanings of words, are given freely in this work. They are not to be found in any other dictionary. Antonyms have the advantage of *definition by contrast*. The meaning of a word is often made clearer by the sharp statement of what it is *not*, as when we note that *pure* signifies "*not* adulterated or mixed," "*not* defiled, polluted, sullied, or tainted," "*not* immodest or indelicate." A statement is often made more effective by vigorous antithesis. Nearly 5,000 antonyms are given.

VIII. QUOTATIONS.

In the treatment of illustrative quotations this dictionary is believed to be more distinctly representative of the literature of the English-speaking world than any other similar work. More than 100,000 volumes were read to supply the 2,000,000 quotations submitted. About 32,000 selections were made from this vast aggregation, from modern books including the very latest standard works of reference. Avoiding the common practise of spelling the words given to illustrate their usage in the forms preferred by the dictionary quoting them, the NEW STANDARD DICTIONARY has taken pains to follow the author's spelling to the letter in every case. The places of quotations used to verify or illustrate the meanings of words are so indicated that they can be easily found—the name of the author and the title of the work, the volume, chapter, and page, and usually the name of the publisher and date of publication being given: as, PRESCOTT *Ferdinand and Isabella* vol. ii, pt. ii, ch. 1, p. 286. [L. 1860.]; which means that the quotation given is to be found in Prescott's "Ferdinand and Isabella" in volume ii, part ii, chapter 1, page 286, in the edition published in 1860 by Lippincott. The abbreviations used to indicate publishers will be found on pp. xxxvi, xxxvii. Stock dictionary quotations—that is, those that have done service for years in dictionaries—were discarded, with few exceptions, and their places supplied by others believed to illustrate better the meaning of the words defined, while giving additional authority for their use in any specified sense. Practically all English literature from Chaucer's time to the present was ransacked for this purpose.

Quotations Located and Author's Spelling Retained.

With the standard literature of the past, the current literature of the present was also recognized. Much of the English printed in our periodical press is of the purest type in use to-day; none is more forceful; none more incisive. The modern newspapers and magazines are true molders of thought and accurately reflect the culture of the time, especially in relation to the English-speaking peoples, inasmuch as of the total of 70,000 periodicals published throughout the world no less than 35,000 are in the English language. Therefore the daily papers and the periodical press have been freely drawn upon to illustrate by quotation the virile language of the time

Newspapers and Periodicals Quoted.

IX. PICTORIAL ILLUSTRATIONS.

The pictorial illustrations made especially for this work were produced in accordance with the rule that pictures in a dictionary should be definitive of the objects. A dictionary should not be a picture-book; yet this rule has been deviated from so far as to permit the admission of a few pictures, largely because of their historic or general encyclopedic value. The drawing and engraving of the illustrations were done in harmony with the general plan of the dictionary, that of having the work of each department committed, so far as feasible, to specialists.

Reproductions of Masterpieces.

Wherever possible, typical specimens of the fine arts are given. Reproductions of famous pictures by FRA ANGELICO, ROSA BONHEUR, DELLA ROBBIA, GUSTAVE DORÉ, DRÖLLING, GÉRÔME, MICHELANGELO, JEAN FRANÇOIS MILLET, NICCOLO PISANO, RAFFAEL, GUIDO RENI, RUBENS, VELASQUEZ, PAUL VERONESE, LEONARDO DA VINCI, and others are used.

Wealth of Illustrative Matter.

The pictorial illustrations number more than 7,000. If the items included in each picture-group were taken into consideration, the total would amount to more than 10,000. As a rule, every illustration given in this work has been inserted to serve a definite purpose—to supplement verbal definition by pictorial demonstration. Often it is much easier to show by a picture what a thing really is than to define it by mere words.

Up-to-date Presentation of Technical Subjects.

Special efforts were made to supply up-to-date illustrations, as will be seen by consulting the maps of the *poles* and any illustrations of the various mechanical devices and appliances. Many of these have been already mentioned under the topics to which they specifically apply. In Electricity, Engineering, Handicrafts, and Mechanical Arts in general, the very latest model available has been secured and presented, as will be seen under *aeroplane, caisson, chassis, marine engine, motor-boat, printing-press, steamship, three-high rolls, turbine, watch, wireless telegraphy, wireless telephony,* etc.

In some cases, the better to aid comparison, a system of grouping has been adopted. A systematic plan of illustrating all sports, games, popular pastimes, setting-up exercises, etc., with accessories and dimensions, where needed, has been carefully carried out.

Typical Illustrations.

Among the full-page illustrations are a reproduction, in facsimile, of the *Declaration of Independence;* new full-page plates in black and white prepared under the direction of the AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, of New York, showing in pictorial form the history and development of *aeronautics* and *aviation,* and giving detailed views of the latest models of *aeroplanes;* two plates of modern *steel construction,* prepared under the personal direction of M. M. LE BRUN, architect and designer of the Metropolitan Tower, New York, and CASS GILBERT, architect and designer of the Woolworth Building, New York; two plates of *motor-vehicles,* including passenger and industrial and commercial vehicles, and showing the detailed mechanism of a typical car, prepared with the aid of the SOCIETY OF AUTOMOTIVE ENGINEERS and AUTOMOBILE TOPICS of New York; a plate of *wireless telephony* prepared by the WESTERN ELECTRIC COMPANY, New York, and one of *wireless telegraphy,* prepared by the RADIO CORPORATION OF AMERICA; and a remarkably clear plate of *diamonds* and *pearls,* prepared under the direction of DR. GEORGE F. KUNZ, gem expert of TIFFANY & COMPANY. This plate shows some of the world's noted diamonds, cut and uncut, with the sizes and weights of diamonds and pearls.

The plates of *fire-fighting appliances;* of the *leaves* of various trees; of *flowers;* of *birds;* of *dogs, horses, cattle, sheep,* and *swine;* the *table of geological history,* etc., will be found highly instructive. The many colored plates distributed throughout the book, as those of *bacteria, flags of the nations, coins, national coats of arms, pilot- and signal-flags,* the *solar spectrum* and *standard colors,* etc., are not only highly informing in themselves, but are striking examples of the lithographer's art of to-day.

Wherever a useful purpose is served by so doing, the proportion which the illustration of an animal bears to the animal illustrated is recorded in fractional numbers with the legend.

A plate of *solar spectrum* and *standard colors* is given in two sections, the upper part showing the spectrum, the lower part being devoted to typical colors. Connected with this is the exact definition of the six primary colors of the *spectrum,* of which a table will be found, together with the analysis of several hundred shades and tints now before the public in various forms, many of which bear fancy names. This branch of the work was performed in the Department of Physics of Columbia University under the supervision of Prof. WILLIAM HALLOCK, Ph.D., and is based on the solar spectrum—nature's own standard of colors. It is to be hoped that Professor HALLOCK's labors may lead to the general use of the system he has devised, and prove a great step toward establishing that long-looked-for desideratum—a standard of colors.

X. CHARACTERIZATION OF WORDS.

Class and Use of Words Denoted.

To aid those who consult the dictionary, certain words and meanings are characterized in such a way as to enable one to judge of their standing and application at a glance. If such a characterization indicates a language distinction—that is, if it classifies the word or meaning as foreign, non-reputable, or local—it is enclosed in brackets; as [P. I.] for Philippine Islands; [Colloq., Eng.] for colloquial in England; [Local, U. S.] for local in the United States. If it marks a class distinction—that is, if it designates the use or meaning of the word as principally confined to some class of persons or objects, as in technical or scientific use—it is italicized; as, *Med.* for *Medical* or *Medicine, Polit.* for *Politics, Bot.* for *Botany,* etc. In characterizing scientific and technical terms, care is taken to distinguish between words that properly belong to the scientific vocabulary and words that are common names of things of which the science treats; thus, *Mollusca* is marked *Zool.,* but *mollusk* has no characterization. In accordance with the plan of distribution of branches of art and science adopted in this work, a distinction is also made between terms and meanings confined to a branch of a science and those used more generally in that science; thus, *Pathol., Anat.,* etc., have been used wherever practicable instead of *Med.; Entom., Helminth.,* etc., instead of *Zool.;* and *Mech., Optics, Elec.,* etc., instead of *Physics.* Sometimes, however, the characterization is embodied in the definition, preceded by "In" or "Among" (as, "In the Romance languages," "In astronomy," "Among zoologists," etc.); sometimes it is placed at the end; as, "said of birds of prey."

The definitions of foreign words that retain their original form and are always spoken with their original pronunciation are preceded by the abbreviated name of the language from which they were taken; as [F.] French, [It.] Italian. Foreign words partly modified in form or pronunciation, or words or senses used specifically in some foreign country, are usually marked by the name (generally abbreviated) of the country or region in which they are used or whence they come; as [S. Am.] South America, [Egypt.] Egyptian. The word *dialectic* is used to mark such words as have place in a recognized dialect, and *provincial* to mark rural as opposed to metropolitan usage, or that restricted to colonial or outlying regions, as distinguished from general usage. Words adopted from native tongues, or from the languages of previous colonists by English residents in India, etc., are marked [Anglo-Ind.], etc.

Rank and Worth of Words Indicated.

Words that are not used in the best literature are marked [Colloq.], [Slang], [Cant], etc. *Colloquial* words, altho not in literary use, are such as might be used in familiar conversation by the most cultivated people, while *slang* is intended to characterize such terms as have no proper place in cultivated language, altho not necessarily vulgar, but such as may perhaps be destined to attain reputable standing in the future.

Slang.

If the living power of the English language is to be maintained it must continue to embrace the best that it can find in the common speech, as by natural processes it has done in the past. For these reasons slang words in considerable number will be found recorded in this work. Only that part of slang which is merely the expression of passing fancy or varying whim has not been included, because it is quickly displaced by that which is vigorous, expressive, and picturesque, and that alone is given place.

Variant forms are commonly placed directly after the cty-

mology (or, if they correspond only to a single meaning, directly after that meaning) and marked with a double dagger (‡) if they are living, otherwise with the usual mark for obsoletes (†). These forms include not only alternative spellings but also synonymous terms from different roots, as in the case of technical terms in which one of several names given to a thing has supplanted the others. Where variant forms are important, they are given also separate entry with a reference to the preferred form, but often, especially in the case of obsoletes and simple variations of spelling, entry as a variant is the only recognition given them. Where the variant form is of nearly the same importance as the preferred form, the two are braced together before the definition.

Variants and Obsoletes.

Words belonging rather to the past than to the present, such as obsolescent words, recently revived obsoletes, or affectedly old-fashioned forms, are designated as [Archaic]. In this work all terms are considered obsolete that have not been used by writers of authority since the year 1800. Obsolete words or senses are marked with a dagger (†). Such important words in the Bible and the Book of Common Prayer, however, as are no longer in use elsewhere have been marked [Archaic]. Words seldom used are marked [Rare].

A still broader characterization is made by printing many relatively unimportant words, with their definitions, in small type. In this class are included nearly all obsoletes and foreign words, and many rare, archaic, and technical terms, as well as phrases and compounds associated with a principal word.

Further features characteristic of this work are the giving in appropriate places, and only so far as it is permissible for the lexicographer so to do, certain fundamental rules, as of *grammatical* and *rhetorical construction;* rules correcting the common *errors of speech;* and rules governing the formation of the *plurals of nouns* and the correct *forms of address* used in writing.

Literary Construction, Errors of Speech, Forms of Address.

Much help may be obtained from the plan followed of indicating the correct Prepositions to use in connection with other words. The misuse of these little words is one of the most common errors, and one difficult to avoid; their correct use gives coherence, firmness, and compactness to style, and is an indispensable aid to lucidity. After many verbs, adjectives, etc., will be found a note, "followed by *by*," "followed by *in*," or the like. At the end of many synonym groups, also, appears a heading "Prep.," with examples indicating how various prepositions may be used in connection with the key-word of the group in different connections.

Correct Use of Prepositions Indicated.

Such foreign phrases as the English-speaking person may find it essential or desirable to know are given place in a separate department (pp. 2781–2791). In this department the specific aim is to give the reader a clue to foreign phrases that occur in English literature, law, and speech. Some foreign words and phrases the use of which is frequent in English, and the commoner Latin law terms used in English law, will be found explained in their proper alphabetical place in the main vocabulary of the dictionary. Wherever possible, foreign quotations have been traced to original sources. It must be borne in mind that many foreign phrases, in actual English quotation, have been wrested more or less from their proper original meaning, and that phrases, such as mottoes of institutions and of persons, have from time to time been constructed with little reference to pure classic usage. Therefore, persons who consult this department will, perhaps, need occasionally to remember that a phrase required may be entered in an alphabetic place not answering to that which the form of the phrase, as encountered by them in reading, would demand. Care was taken to conform to the best text accessible in each case.

XI. CHRONOLOGICAL DATA.

In the effort to present an accurate statement of the dates of historic and other events, much time has been consumed by careful examination of authorities. Where these differ, as is not infrequently the case, that date has been accepted which seems to have the greater historical basis of truth. While it has been necessary to consult a great many works, especially in the search for the more obscure data, the broad plan was followed of accepting as correct the leading authorities of each country in each department of chronology—biographical, bibliographical, historical, etc. Thus for men and women of note in American history the editors relied chiefly upon American publications; for those in British history upon works published in Great Britain and its colonies; for those in German history upon the encyclopedias of BROCKHAUS and MEYER; and so on throughout. For Biblical characters and events, the chronology of Archbishop USSHER was followed in part, but in the majority of cases no attempt was made to fix definitely such dates as are conceded by scholars to be beyond the possibility of exact historical computation. The dates in church history were obtained from such standard sources as *The New Schaff-Herzog Encyclopedia of Religious Knowledge*, *The Catholic Encyclopedia*, etc., and for those connected with secular history and its personages recourse was had to the best histories of the various countries concerned, as *The Jewish Encyclopedia*, the *Dictionary of National Biography*, *The Encyclopædia Britannica* (eleventh edition), and other equally authoritative works of reference.

Exact Dates Given Wherever Possible.

With regard to the facts of ancient history it should be borne in mind that many dates prior to the commencement of the Christian era must be considered as only approximately correct. This is due on the one hand to the almost complete absence of reliable written records among primitive races and on the other to the complications incident to the peculiar methods of chronological computation obtaining among ancient peoples. These systems were almost invariably based upon some salient event, from the time of which all subsequent dates were reckoned. It is also true that in the case of many comparatively recent events the authorities often differ considerably. This is largely due to the changes made from time to time in the calendar, notably that made by Pope GREGORY XIII. in 1582, which, while adopted at once in Spain, Portugal, and parts of Italy, was not introduced in the Protestant states of Germany until 1700 or in Great Britain until 1750. This led to two different systems of dating, one ten or eleven days ahead of the other, which greatly increase the difficulty of fixing the time of many contemporary events.

Lack of Harmony in Ancient Chronological Systems.

Dr. ISAAC K. FUNK, the Editor-in-Chief, brought to the conception and completion of this revision the genius for comprehensive plan joined with marvelous mastery of detail—the wide, accurate, and various scholarship in union with the keen practical sagacity, alert to perceive the needs of busy men in the modern world—by which he was able originally to make the STANDARD DICTIONARY a work of such acknowledged worth and power. Not less important, perhaps, was the remarkable gift for organization that could select, from all parts of the world and from every field of human endeavor, scholars of highest rank and practical experts foremost in their several departments, and so coordinate the labors of these as to secure one great unity of final result. With advance of years his ripe experience and constant studious review of the original work had convinced him that the principles on which the STANDARD DICTIONARY had been made admitted of more extended application on the same broad basis of simplicity combined with accuracy. He recognized not less clearly that the rapid advance of the world in knowledge and achievement required the addition of what is new to what was of proved excellence in the old to make a dictionary that should represent the present, and not alone the past. This great undertaking, thus devised, he had practically completed before his death. The NEW STANDARD DICTIONARY, now completed, stands as the crowning work of his great life.

To the Managing Editor, Dr. FRANK H. VIZETELLY, who was closely associated with Dr. FUNK in his work for more than twenty years, too high tribute cannot be paid for the administrative ability, the critical discernment, the wide lexicographic knowledge, and the loyal and tireless industry with which he has conducted the work from beginning to end.

To Prof. CALVIN THOMAS, Consulting Editor, hearty thanks are due for valued assistance and wise counsel during the initiatory stages and also during the progress of this work.

ESPECIAL APPRECIATION of the practical assistance rendered by the various SECRETARIES and DEPARTMENTS OF THE UNITED

States Government is hereby acknowledged. Thanks are tendered particularly to the Secretary of State and his Department; to the Department of Agriculture, including the Division of Entomology and its Chief, and the Weather Bureau, its Chief, and Librarian; to the Post-Office Department; to the Department of Commerce and Labor; to the Department of the Interior, including the United States Geological Survey and its Chief; to the Department of War and its Secretary; to the Department of the Navy and its Secretary; to the Secretary of the Treasury and his Department, especially to the Deputy Controller of the Currency, to the Board of United States General Appraisers, and to the Bureau of the Mint; to the United States National Museum, Smithsonian Institution, Washington, D. C.; and to the Collector and the Officers of the United States Custom-House at the Port of New York.

Thanks are tendered to the Officers of New York University, the New York Public Library, Columbia University Library, and the Mercantile Library; to the American Museum of Natural History, the Metropolitan Museum of Art, the New York Zoological Society, and the Botanical Gardens, New York; to the Commissioner of Police and the Police Department of New York city; to the Commissioner and Chief of the Fire Department, New York city; and to the Officers of the New York Post-Office, for courteous assistance; also to a large number of other contributors and friends distributed over all the world, who rendered great help by voluntary contributions and suggestions.

The Funk & Wagnalls New Standard Dictionary of the English Language, which with each successive revision is kept abreast of the times, is now offered to the public with the confident hope that the favor so liberally granted to the original work may be extended in even larger measure to this, with its many new elements of value and efficiency.

SPELLING AND PRONUNCIATION.

1. The Standard of Pronunciation.

THE primary function of an English dictionary is to record the facts of usage as regards the form, the meaning, and the pronunciation of English words. The book must be first of all a record of fact, not of opinion, dogma, or personal taste. Language in every phase of it is ultimately a matter of conventional usage, and there is no higher court of appeal. But this does not mean that the dictionary has no concern with what ought to be, in contradistinction to what is. On the contrary, it must often pass judgment and give counsel, thus becoming an "authority." This is what the public expects and has a right to expect.

There are two reasons why the dictionary can not, if it would, evade the responsibility of passing judgment. In the first place, usage is infinitely various, so that the whole of it can not possibly be recorded. It varies with the time and place, with the culture and social status of the individual, with the speech-habit of the community. A selection of the usages to be recorded must inevitably be made, and selection involves a critical act. To include or to exclude is to pass judgment.

In the second place, change is the law of life for a spoken language, and usage is therefore never absolutely binding. We call it binding in proportion as it has endured for a long time and has been accepted by everybody. Thus arise the so-called laws of language—brief, summary statements of accepted usage. Whatever runs counter to those laws must be regarded, provisionally at least, as incorrect or bad; and it is the plain duty of the lexicographer to state the fact as it is. But all things are in a flux, and that which is bad to-day may become good to-morrow. A fashion may spring up in defiance of previous usage, of logic, even of common sense; if it prevails it is a part of the language, and must be recognized as such by the lexicographer. But when may a usage be said to have prevailed? After a decade, or a century, or five centuries? How large a following must it have to give it entire respectability? To such questions no precise answer is possible. The dictionary is a record of fashion, and fashion varies with the time and place. Hence the lexicographer can not, if he would, avoid passing judgment on the facts of usage.

The bearing of all this on the subject of pronunciation should be obvious. It is customary to say that the "standard" is the usage of the best speakers. But who are the best speakers? Are they the literary class of London, or of New York, the scholars of New England, the merchants of Liverpool or Chicago, the gentry of the South? Shall we keep in view the language of refined conversation, that of formal public discourse, that of the stage, or that of the pulpit? To such questions, again, there is no scientific answer possible—no answer that is not more or less the voice of habit and prejudice. The educated person who is conscious of a good upbringing is apt to assume that his own way of speaking is normal English, and that those who speak differently speak "brogue" or "dialect." But the truth is that we all speak dialect—the dialect of our social group. This is the condition by which we make ourselves easily understood and avoid seeming odd.

It may be that at some future time the English-speaking peoples will call an international orthoepic congress, with a view to discussing and compromising dialectal differences and agreeing on a convenient eclectic norm, which could then be taught in the schools by means of standard phonographs. The lexicographer would then have a real if more or less artificial "standard"; but until then the idea of a standard pronunciation must remain somewhat chimerical. In the last analysis it must mean some one's preference. But no one has been appointed supreme arbiter or given the right to speak with "authority" for the two hundred millions, more or less, who now use the English language.

Under such circumstances the dictionary will do its duty best by faithfully reflecting the facts of refined usage and describing the more important of the existing differences, without claiming superiority for the speech-habit of any particular locality or social group on either side of the ocean. We say "refined usage"; for in general slang and vulgar speech and provincial dialect must be left to special dictionaries covering those fields. On the other hand, the larger differences that characterize the speech of great masses of educated folk in different parts of the English-speaking world must be taken into consideration. This means that we must have an alphabet capable of recording the differences in question.

2. The Necessity of Respelling.

It is unfortunate that pronunciation can not be exactly shown by means of the English alphabet as ordinarily employed, but such is the fact. This is because we are in the habit of denoting different sounds by the same letter and the same sound by different letters. The conditions are such that, if several educated persons were to hear a word for the first time, they would probably spell it differently; and if they were to see a word for the first time they would pronounce it differently. If, then, we wish to avoid ambiguity it is necessary either to employ diacritical marks or else to respell the word with symbols that are unmistakable.

The earlier lexicographers resorted to diacritical marks—dots, curves, numbers, or other signs—placed over or under the letter; and this method is still largely in use. But it is unsatisfactory because so many marks are required. If our spelling were nearly phonetic; if, for example, the letter *a* had only the two sounds it has in *bat* and *bar*, it would be easy to mark the latter, say, as ä, and there would be no need of respelling, so far as that particular letter is concerned. But the letter *a* is used also for the vowels heard in *fate, fare, fall, fast,* and in the first syllable of *about*. This necessitates five more marks for *a;* and since the total number available in the printing-office is not very great, it becomes practically necessary to use the same marks over and over again, in connection with other vowel letters, to denote various groups of sounds. There must be a mark to show when a letter is silent, a mark to show whether a vowel is long or short; and there must be accent-marks. And so it will often happen that the same letter must have two or three diacritics.

All this leads to confusion. The marks offend the eye, they make trouble for writer, printer, and proof-reader, they get worn and broken in the process of printing. Worst of all, they fail to do the work for which they are designed, since they leave us, just as in the ordinary spelling, with many different symbols for the same sound.

It is therefore better to respell, and this is the method adopted in recent years by most of the dictionaries. That we should be thus obliged to respell words in order to show how they are pronounced is a pity and an absurdity, since the original and proper function of spelling is to do that very thing. The maker of a German, an Italian, a Spanish dictionary has rarely any need to respell a word in order to tell his own countrymen how the word is pronounced. But in English that necessity exists and must continue to exist as long as our so-called orthography continues on its present footing. Hence arises the problem of a scientific alphabet—something not at all identical with the question of spelling-reform. The more tenaciously we cling to our present orthographic habits, the greater the need of an accepted notation which can be used, as the ordinary spelling can not be used, to show unmistakably and with a fair degree of precision how English words are pronounced.

3. The Problem of a Scientific Alphabet.

By a scientific alphabet is meant, ideally speaking, an alphabet in which each letter denotes one sound only, and each sound is invariably denoted by the same letter. The latter principle is more important than the former. To use two letters for the same sound does no harm except to cumber the alphabet with a useless symbol and to force on the writer the necessity of choosing between them on other than phonetic grounds. On the other hand, to denote two or more sounds by the same symbol may mislead the reader, which is a far more serious matter. For instance, if it is understood that *c* and *s* always have the same sound before *e*, the reader knows that *cent* is phonetically the same

as *sent;* but if *c* may also have the sound of *k*, he can not tell whether *cell*, for instance, means *settle* or *kettle*.

The ideal of a scientific alphabet is easy to formulate but hard to realize; nor is its complete realization practically of great importance. The total number of speech sounds used by mankind is beyond computation: a universal scientific alphabet would contain so many symbols that no one could read or remember them. And even if one regards only the English language and its dialects, the number of sounds that can be distinguished by an expert phonetician is much greater than is popularly supposed. At a moderate estimate he would need a hundred symbols. But such an alphabet, while useful in phonetic science, would be worse than useless in a dictionary for everybody. What is needed there is a golden mean between the expert's too many and the Latin alphabet's too few. Just as the housekeeper would be hindered rather than helped by a clock marking fractions of a second, so the average user of a dictionary is best served by a phonetic notation confined to what may be called the principal sounds of the language—those which can be discriminated by everybody who is willing to give a little attention to the subject—it being duly recognized that each symbol denotes not an invariable physical fact, but a type of sound that varies more or less within narrow limits. Thus the *n* of *tin* is not exactly the same as the *n* of *inch*, and the *t* of *bat* is slightly different from the *t* of *battle;* nevertheless, we can get along very well, even in an alphabet calling itself scientific, with one *t* and one *n*. What the "principal sounds" are, and how many symbols are therefore needed, is a question of some difficulty, about which there is room for a difference of opinion. It is a question to be answered by scientific analysis tempered by considerations of practical utility.

The prime requisites of a good notation are that it be easy to learn, easy to read, and easy to remember. This means that the familiar Roman letters are preferable to analphabetic characters such as those of Bell's "Visible Speech," which are eminently scientific but hard to learn and easy to forget. Minor requisites of a more esthetic nature are that the symbols be typographically congruous, *i. e.*, taken from the same type-font, without intermixture of Latin and non-Latin letters, or upper- and lower-case, or roman and italic forms. Diacritical marks should be as few as possible. Diphthongs should be denoted by their proper component parts; and if, for the reader's convenience, two letters are used for a simple sound, as *sh* for the consonant in *shy*, the two letters should be tied (sh), to show that the sound is not composite. Finally, it is better to use the fundamental vowel letters with their original Latin values. This brings the notation into accord with international phonetic science and makes it a help rather than a hindrance in the study of Latin, French, German, Spanish, and Italian. It is really quite impossible to devise a satisfactory scientific notation if the diphthong which we miscall "long i" is to be denoted by ī and a different tho short sound by ĭ. The two sounds do not stand to each other in the relation of "long" and "short" any more than do the *a*'s of *fat* and *fate*, or the *e*'s of *evil* and *devil*.

4. The Scientific Alphabet of 1877.

In the year 1877 the American Philological Association agreed on a notation which, with some slight modifications, was used in the first edition of this Dictionary and has often been referred to as the "scientific alphabet." The salient features of this notation were the use of the vowel forms a, e, i, o, u in their Latin values and the proposal of the three new letters ɑ, ɵ, ʊ. Thus the complete vowel-scheme consisted of the letters ɑ, a, e, i, o, ɵ, u, ʊ, which, when used without a mark of quantity, were to denote the sounds heard in *artistic, bat, pen, pin, poetic, not* (as pronounced with slight rounding), *full, but*. The corresponding long vowels, as heard in *art, bare, day, marine, note, north, fool, burn*, were to be marked if necessary with a sign of length.

The eminent scholars who devised this scheme hoped that the new vowels would gradually win their way into ordinary print. Just as, a few centuries ago, the public had accustomed itself to the useful differentiation of *u* and *v*, *i* and *j*, might not the public of the nineteenth century accustom itself to the no less useful differentiation of a and ɑ, o and ɵ, u and ʊ? If this were to happen there would, of course, be a period of transition during which the new letters would be gradually gaining ground in public favor in the face of more or less opposition. To disarm this opposition, and facilitate the popular acceptance of the new way of spelling, it was deemed expedient not to insist on the strict ideal of a scientific alphabet, but to compromise somewhat freely with the ordinary spelling. So the letter *c* was kept, but always with the sound of *k*. At the same time *k* was not rejected, and *q* and *x* were admitted as alternatives. Thus one might spell quit, cwit, or kwit; fox, focs, or foks. The digraphs *th, sh,* and *ng* were retained for the simple sounds heard in *thin, ship, sing,* and *dh* and *zh* were recommended for the simple sounds heard in *this* and *azure*. For the *ch* of *chin* and the *j* of *jaw* the familiar *ch* and *j* were retained.

5. The Revised Scientific Alphabet.

It has been seen how, in the alphabet of 1877, scientific rigor was in some degree sacrificed to the hope of popular acceptance. But this hope was not fulfilled to a justifiable extent. In the course of time the question of a better notation — one somewhat more in accord with the new science of phonetics — began to be mooted among educationists. In the summer of 1903, on the initiative of the Department of Superintendence of the National Education Association, a conference was called at Boston for the purpose of taking steps toward the adoption of a phonetic alphabet of medium precision, such as could be used in the elementary teaching of phonetics, and also in dictionaries and text-books where words are respelled for pronunciation. It was thought, naturally enough, that this double benefit could be got by this one effort; and that, if the experts could agree on a particular notation as on the whole the best, and if then the public could be induced to accept it, such a standard phonetic alphabet would have some very important educational uses in quickening the phonetic sense of our people.

The Boston conference, which comprised delegates from the Department of Superintendence of the National Education Association, the American Philological Association, and the Modern Language Association of America, quickly agreed that the alphabet of 1877 was excellent in its main features, but needed some revision in matters of detail. A joint committee of five was accordingly appointed, with instruction to consider the whole subject carefully and if possible to bring about an agreement of the experts on a phonetic alphabet, based on the alphabet of 1877. In 1904 this joint committee published an elaborate report, in which the entire problem was carefully traversed and an alphabet was submitted as a basis of agreement. The report of the joint committee, which was acceptable to the National Education Association Committee, was then sent to the two philological societies, which appointed committees of revision to investigate and report. The entire matter was then studied afresh by the two committees of revision, and the result of their labors was a second printed report, which in the main indorsed the report of the joint committee, but proposed certain amendments in identical form. This second report, with the amendments, was formally adopted by the two philological societies in 1905. We shall refer to it as the A. P. (American Philologists') alphabet. The A. P. alphabet, as finally adopted, was not altogether satisfactory to the Committee of the Department of Superintendence of the National Education Association, which committee accordingly submitted to the National Education Association at its meeting at Boston, July, 1910, an alphabet that seemed to it better adapted to educational needs. The Association ordered this alphabet printed and distributed among its members, and that it be submitted to the Department of Superintendence at its next meeting. It was so submitted at the meeting of the Department at Mobile, Ala., February 24, 1911, which body approved and adopted it. This is the alphabet employed in Key 1 of this Dictionary. We shall refer to it as the N. E. A. alphabet. The points in which it differs from the A. P. alphabet are as follows:

(1) *The notation of the* a *sounds.*—For the five sounds heard in *bat, bare, artistic, art, ask,* the A. P. alphabet has, respectively, the symbols æ, ǣ, a, â, ā, whereas Key 1 employs a, ā, ɑ, ɑ̄, a. The crux here lies in the selection of the best symbol for the vowel of *bat*, since, with that question settled, the other symbols follow almost as a matter of course. The ligature æ is employed for the sound in the alphabet of the International Phonetic Association, and hence, quite generally, in the literature of phonetic science. It is used in the great Oxford Dictionary. This is obviously a strong point in its favor, and it must be admitted that, for the purposes of an international alphabet, æ is the best symbol. The sound hardly occurs in French, German, Italian, or Spanish; it is thus quite natural that Continental phoneticians should prefer to use the ordinary print form a for their own ordinary *a* sound, and to denote the peculiar high English vowel by the Anglo-Saxon ligature æ.

But in an English dictionary such a notation has its inconveniences: It necessitates the virtual disuse of the familiar a (the sound of *a* in *artistic* being extremely rare in English), and the use of the ligature in an immense number of very common words ordinarily spelled with a. Such respellings as kæt for *cat* and hænd for *hand* seem to the ordinary reader to make a simple matter difficult.

This being so, and also because the upright italic ɑ̄ (with a macron as sign of length) has from the first been used in this Dictionary for the so-called Italian *a* and is now familiar to a multitude of readers in that value, and because, finally, it is deemed desirable that the form ɑ should come into use in ordinary print for the sound in question (there being no likelihood that the public will take up with the Anglo-Saxon æ for the vowel of *bat*), the old notation for the *a* sounds has been retained, with the exception that ɑ is used for the shortened ɑ̄ as heard in *artistic*, but not for the final vowel of *sofa*, and with the addition of ā for the vowel that varies between a and ɑ̄. The use of these, as of all other symbols, will be explained below.

(2) *The* y *of yet and the* j *of jet.*—These two hang together. For the former the A. P. alphabet has *j*, for the latter dʒ, while Key 1 employs *y* and *j* respectively. Here again, from the point of view of international phonetic science, the former is the better notation; but for an eye accustomed only to the English language the latter is the more natural.

(3) *The* sh *of ship and the* ch *of chip.*—For the former the A. P. alphabet has ʃ, for the latter tʃ; Key 1 employs sh and ch respectively. This is again simply a concession to English visual habit.

(4) *The* th *sounds.*—For the *th* of *thin* the A. P. alphabet has þ, for the *th* of *this* ð; Key 1 employs th and th—another concession to English visual habit.

(5) *Syllabic* l, m, n, r.—For these the A. P. alphabet has *'l*, *'m*, *'n*, *'r*, spelling *battle*, *bottom*, *fasten*, *sinner* as bæt'l, bɔt'm, fæs'n, sin'r. Omission of the apostrophe involves ignoring the very audible difference between the *l* of *battle* and the *l* of *battling*, for which a sign is really needed. But the apostrophe, which naturally suggests something omitted, is not a good sign for the purpose and might lead to confusion when used in connection with accent-marks, as in bat"l, ti'ket"l.

From what has been said it will be evident that the N. E. A. Alphabet, intended as it is for the general public, is sufficiently precise for all practical purposes, but occasionally sacrifices the extreme of precision to simplicity and distinctness. Just what this means will appear from the detailed explanation of the symbols in § 8 below. In this Dictionary, the syllable which has the principal stress is marked by an acute accent (') after it. Syllables that have less stress than the primary are marked with a secondary accent (").

6. The Symbols for the Unstressed Vowels.

It is one of the deeply ingrained characteristics of the English language that unstressed vowels are more or less "obscured" in the utterance. This is especially the case in the syllable just before or just after the primary accent. Thus the middle syllable of *monarchy*, *misery*, *primary*, *murmuring*, *martyrdom* is pronounced by most speakers with the same vowel. This vowel Key 1 denotes by the letter ə. It is a mistake to regard the "obscuration" of unstressed vowels as due to slovenly pronunciation or colloquial weakening. The phenomenon is a law of the language, and belongs not only to familiar talk, but also to the most formal and deliberate speech. There are, indeed, certain endings, such as *-ment* and *-tor*, which are more apt to have the ə in talk than in formal utterance; but these are exceptional cases. Speaking broadly, the "obscuration" of an unstressed vowel is just as much a part of the language as are its laws of grammar. One who should attempt to read a passage, it matters not whether lofty or colloquial, and to sound all the unstressed vowels "distinctly," *i. e.*, as they would be sounded in stressed syllables, would at once be set down as a person unacquainted with the English language.

Nor can we rightly say that the so-called obscuration is a matter of shortening, or of "variation" between two different types of stressed vowel. No amount of shortening of the *e* in *very* will produce the *e* in *misery;* the latter is a different vowel. Nor can we say that the *e* of *misery* is a vowel which "varies" between the *e* of *very* and the *u* of *but*. It does not vary at all, but is as uniform as any vowel in the language. Never does it sound like the *e* in *very* or the *u* in *but*. In short, it is a vowel *sui generis*, and as such should have a symbol in any scientific alphabet. There are, indeed, cases in which some speakers avoid and disapprove the ə sound which the many pronounce; thus, some make a point of saying rek'ərd instead of rek'ərd. But if there are such differences of usage and opinion, a symbol is needed by which they can be clearly indicated to the eye. To have and use a letter capable of showing how one *does* pronounce has nothing to do with the question how one *should* pronounce. Phonetics is a matter of science; orthoepy, a matter of taste, depending on instruction or habit.

It is true that if there were but one unstressed vowel in English there would be no need of a letter for it, however variously the usual spelling might denote it. But there are several; and one in particular appears in such a variety of spellings that it is best to have a letter for that also. This is the vowel heard in the last syllable of *habit*, *candid*, and in the first syllable of *renew*. It is a little nearer to the *i* of *sit* than to any other accented vowel, but almost as near to the vowel of *set*. One must remember that in passing from the *e* of *set* to the *i* of *sit* the frontward movement of the tongue is very slight—only the minute fraction of an inch. If then the *i* in *sit* is uttered with a weak action of the tongue, such as regularly goes with an unstressed vowel, the result is slightly to "lower" the *i* toward *e*. Thus, one gets a vowel which is neither *i* nor *e*, but between the two and readily identifiable with either. One can easily imagine that one pronounces *habit* with an *i* and *volley* with an *e;* but it is not really so. It is the nature of this vowel, as also of ə, to be unstressed. If it be stressed ever so little, to show its kinship with some "distinct" vowel, its character is destroyed.

If the second vowel of *habit* were always written *i*, one could dispense with a special symbol for it and ignore the difference between the *i* of *bit* and the *i* of *habit*. Again, if the vowel in question were always written *e*, as it is in the first syllable in *renew*, *depress*, etc., one could get along with e. But one does not like to write *valley* as vale, or *city* as cite; nor does one wish to respell *palace*, *agate*, *average*, as pales, aget, averej, or *captain* as kapten, when it is stated expressly that e has the sound of *e* in *met*. It is sometimes best to keep a bad notation to which everybody is accustomed; but to change from a bad one that is familiar to another bad one that is new is indefensible.

Since the vowel under consideration is really a half-fledged or imperfectly formed i, it may very well be denoted by an i without the dot. Preference is given to that symbol instead of to the dotless i with a breve, suggested in the A. P. alphabet.

Aside from ə and ɪ, there are no unstressed vowels that seem to require special symbols. See §§ 7, 8, and 9 under o, e, and u.

7. The Marking of the Quantity of Vowels.

By the quantity of a vowel is meant, properly speaking, the relative amount of time taken in uttering it. It is necessary to say the "relative" time, since no absolute unit of measurement is practicable. The tempo of speech varies greatly. Some persons habitually speak more rapidly than others, and the same person uses a different tempo according to the occasion or the state of his feelings. Vowels may be prolonged in singing, in calling, for emphasis, or under the varying influence of the sentence-accent. It is thus impossible to fix a unit of length with mathematical accuracy, but every one can perceive gradations of relative length. A close observer may grade vowels as very long, long, medium, short, and very short. Almost any one, with a little attention to the subject, may hear the three grades, long, medium, and short. For ordinary purposes, however, it suffices to distinguish graphically only the two grades, long and short. This is what our conventional spelling undertakes to do, but with very indifferent success.

The usual way of denoting a long vowel, in the conventional spelling, is by means of a biliteral symbol, like the *oa* of *soap*, the *oo* of *door*, the *ou* of *pour*, the *o*+consonant+silent *e* of *note*—all for long *o*. The device for showing that a vowel is short is to double the following consonant, as in *bitter*, *dapper*, *juggle*. Neither of these methods, however, has been applied systematically; many biliteral symbols may denote a short sound, like the *ay* of *says*, the *oe* of *does*, the *eo* of *leopard*, the *ea* of *head*, and very frequently, as in *epic*, *tonic*, *river*, the consonant is not doubled after a short vowel. In a scientific alphabet neither of these methods is acceptable, since every symbol ought to be self-contained, *i. e.*, to show in itself what it stands for without depending on anything else. There is but one *t* in *bitter:* to write two, for the purpose of distinguishing the word from *biter*, is

quite wrong, since the difference between the two words resides in the vowel, not in the consonant.

Another difficulty begotten of our conventional spelling and the confused terminology that has grown up in connection with it is that notions of quantity have come to be mixed up in the general mind with notions of quality. Thus one hears of the "long a" of *paste* and the "short a" of *past*, when both vowels are long. The vowel of *met* is called "short e" and that of *mete* "long e"; but the real long of the e in *met*, while common in some other languages, is little used in English, tho one may hear it at least half-long when it is followed by a voiced consonant in an accented syllable, as in *beg, says, blend.* So, too, the real short of the *e* in *mete* is very rare in English, tho it may be heard in the first syllable of *Eolian.* What is called "long u" is generally a diphthong having no quantitative relation whatever to the so-called "short u" of *but.* In brief, the words "long" and "short," as popularly used to define vowel-quantity, are meaningless and misleading.

Now, in any phonetic notation that aims at a high degree of precision it is important to have a sign of length that means prolongation and nothing else. To carry out that principle strictly, however, would require several symbols more than appear in the N. E. A. alphabet. Most of the vowels are either open or close, and each variety may be long or short. Thus, taking the historical e sounds for illustration, one would need to distinguish the open short in *met*, the open long in *blend*, the close long in *they*, and the close short in the first syllable of *aerial.* But such refinements would be more bewildering than helpful to the general reader. Therefore, this alphabet ignores the open long *e* of *blend*, which always takes care of itself in pronunciation, and also the close short in *aerial*, which is of rare occurrence: Thus only two signs are used for the *e* sounds: e for the open short, and ē for the close long. This means, however, that the macron, which is primarily a sign of simple length, usually connotes also a slight difference of quality. Thus, *magnate* is respelled as mag'nēt, tho the e is not really long—not much, if any, longer than the stressed e of *magnetic* (magnet'ık).

Similar compromises are made in a few other cases—always for the sake of simplicity and on the general theory that, in a notation for popular use, a very little imprecision is better than a great deal of bewilderment. For details, see the following section.

8. The Symbols and the Sounds They Denote.

For the purpose of explaining how the symbols of the N. E. A. alphabet are used in Key 1 of this Dictionary, and how their use is related to the more important variations of English pronunciation, these symbols are now considered. As to the mode of production of the various sounds by the organs of speech, and the technical names they bear in phonetic science, the reader is referred to the Dictionary itself under the letters A, B, C, etc.

A. Vowels and Diphthongs.

The symbols are: a, ā, ɑ, ɑ̄, ạ, e, ē, i, ī, ı, o, ō, ẹ, ē̩, u, ū, ʊ, ʊ̄, ə, ɑi, ɑu, ei, iu, iū.

(1) a and ā.

These denote the vowel heard short in *bat, cap, lack,* and long in *bare, fair, pear, heir.* Many speakers, especially in England, pronounce the vowel of *bear, fare,* etc. (ā before r), a little higher than that of *bat,* so that it sounds very much like the prolongation of the e in *met, very.* It is further to be noted that a is regularly prolonged before a voiced consonant in monosyllables, especially if they bear the sentence-accent. Thus in *stand, villain, stand!* the vowel of *stand* is long, while in *standing* it is half-long, and in *inkstand* it is short. Note the similar difference in *mankind* (a), *every man* (a), *behold the man* (ā)! and in *has* (a) *he come? he has* (ā). Strict accuracy would thus require that the pronunciation of *has* be given as haz or hāz, according as the word is used. It is also often heard as həz or əz. In such cases a is used as representing the normal vowel, and the variants due to increase or decrease of stress are ignored.

(2) ɑ and ɑ̄.

This vowel occurs chiefly before *r;* thus, ɑ in *artistic, cartoon,* and ɑ̄ in *art, hard, garden, calm, alms, father.* Most often the unstressed ɑr becomes ər, as in *separate, monarchy, partake.* There is some variation in the length of ɑ̄; thus, it is longer in *mart* than in *martyr,* longer in *garden* than in *garter.* These slight variations are ignored in respelling, ɑ̄ being used wherever the vowel is notably longer than in *artistic.* In American English the so-called "short o" of *hot, not, poppy, rotten* has for the most part lost its rounding, so that these words are pronounced hɑt, nɑt, pɑpı, rɑtn. In all such cases ɑ is used and the variant with ɑ is ignored.

(3) ạ.

This letter is used for a vowel which varies between a and ɑ, or between ā and ɑ̄. It occurs before *f, s, th,* sometimes before *n* + consonant. Examples: *ask, glass, past, basket, laugh, after, quaff, bath, path, aunt, lancet, dance, France.* The prevailing vowel in the south of England is ɑ̄, in the United States ā. The ancestor of both sounds is ultimately ɑ, which rose to a in very early times and then, in the seventeenth century, became ā before a voiceless fricative, and sometimes before *n* + consonant. Thus the words which had been ask, paſth, became āsk, pāſth. In the eighteenth century the tendency set in, in the south of England, to convert this ā into ɑ̄, but conservatives resisted and clung to the old ā. Gradually ɑ̄ prevailed in London, and then the idea took root that pās was vulgar and pās affected. So refined speakers made a virtue of pronouncing an intermediate vowel, higher than ɑ̄ but not so high as ā. It is this "refined transition," as it has been called, that is denoted by ạ. It is generally long, but may be short in unstressed syllables, as *wine-glass, cow-path,* or half-long in words of more than one syllable, as *basket, pastime.* The symbol ạ is used not to express a preference for the intermediate sound as more correct or more elegant, but simply as a short way of indicating that the pronunciation varies. Thus the respelling bạſth means that the word is either bɑ̄ſth or bāſth or between the two.

(4) e and ē.

As above stated in § 7, ē is closer as well as longer than e. Usually e stands for the open short vowel of *met,* ē for the close long of *may.* But e is employed also for the open sound when lengthened before a voiced consonant in emphatic monosyllables, as in *beg, blend, says;* and ē for the close sound when shortened in an unstressed syllable, as in *magnate, aerial, always.* So, too, in French and Spanish words, ē is used for the close short vowel of an unstressed syllable; thus, Médoc, León, are respelled mē-dok', lē-ōn'.

Many speakers, both in England and the United States, make ē a diphthong, the first element being a little higher than e, the second a little lower than i. Such familiar spellings as *veil, skein, rein* are a fairly exact rendering of this pronunciation. But as the final element is apt to be very faint, and the first element is a little closer than the e of *met,* it was deemed best to denote the sound by ē rather than by ei.

Examples of e: *set, ten, well, wealth, said, says, leopard, heifer, very, merry, bury, confess; outlet.*

Examples of ē: *bay, bail, they, veil, gate, great, taste, savior, danger, aorta, magnate.*

(5) i and ī.

Usually i denotes the open short vowel of *sit,* ī the close long of *seat.* But i is also used for the open sound when prolonged in emphatic monosyllables before a voiced consonant, as in *bid, big, sinned;* and ī for the close sound when shortened in an unstressed syllable, as in *Eolian, athlete.*

Examples of i: *bit, bid, fill, busy, hymn, build, spirit, delirious, misfit.*

Examples of ī: *marine, lean, piece, seen, scene, Cæsar, Peter, people, fear, belief, receipt, athlete, regent, Socrates.*

(6) ı.

See above, § 6. This sound results from the weakening of a high front vowel when unsupported by the stress. It occurs in obscure syllables having i, y, e, or a in the regular spelling, as in *ability, city, Sunday, visible, difficult, renew, debate, palace,* which are respelled as ə-bil'ı-tı, sit'ı, sun'dı, viz'ı-bl, dif'ı-kult, rı-niū', dı-bēt', pal'ıs.

An unstressed medial *i* in words of Latin origin is apt to vary in pronunciation between ı and ə; thus, *visible, difficult, agitate* are heard now as viz'ı-bl, dif'ı-kult, aj'ı-tēt, and now as viz'ə-bl, dif'ə-kult, aj'ə-tēt. Careful speakers prefer the former pronunciation, which accordingly is the one given in the Dictionary; but the other, altho unapproved, is very common in ordinary conversation.

Certain combinations of consonants tend to prevent i from becoming ɪ; thus the ending *-ism* is always -izm, never -ɪzm. The ending *-ist*, when immediately following the primary stress, as in *typist*, is frequently -ɪst; in the second remove, as in *fabulist, Darwinist*, the *i* is more distinctly pronounced.

(7) o and ō.

The short sound occurs only in unstressed syllables, as in *poetic, elbow*. Except when final, and especially before r, it is apt to become ə; thus, *original, agony, history* are often heard as ə-rij'ɪ-nəl, ag'ə-nɪ, his'tə-rɪ. In such cases, however, careful speakers still pronounce o-rij'ɪ-nəl, ag'o-nɪ, his'to-rɪ. In New England dialect o, instead of the usual ō, is sometimes heard in *coat, road, stone*. The long sound is often diphthongal, in the south of England regularly so. The first element of the diphthong is a little less rounded than o, being virtually identical with ɵ. This is then further rounded during the act of utterance and ends in the labial semivowel. Such familiar spellings as *shoulder, know*, represent this pronunciation.

Examples of o: *rotation, Bohemian, hero, shadow, potato, balcony, dissonant.*

Examples of ō: *boat, note, goes, pour, door, ford, motion, devote.*

(8) ɵ and ɵ̄.

The vowel ɵ differs from o in being less rounded, more open. It is heard short in *autum'nal*, long in *au'tumn*. *Or, for, nor*, etc., have ɵ̄ when emphatic; when unemphatic, either ɵ or, more commonly, ə. What is popularly called "short o," the vowel of *hot, not, pop*, etc., is historically the more open, slightly rounded vowel ɵ, and is still so pronounced in England. In the United States, however, the ɵ has for the most part completely lost its rounding, so that *hot, not, pop* are usually heard as hɑt, nɑt, pɑp. In southern English ō and ɵ̄ are not usually distinguished before r, but come together in a vowel which is between the two: thus, *mourning* and *morning* are pronounced alike. So, too, the vowel of *story*, which we denote by ō, is in southern English half-way between ō and ɵ̄.

Examples of ɵ: *august', hot, cod, bog, stolid, begot.*

Examples of ɵ̄: *Au'gust, author, north, Paul, awl, call, bought, caught, lost, off, moss, cloth.*

(9) u and ū

Here again, as in the case of e and ē, i and ī, there is a difference of quality as well as of quantity, ū as in *pool* being a little more rounded than u as in *pull*. In the interest of simplicity u is used both for the stressed vowel of *pull* and for the unstressed vowel of *value* (val'yu), tho they are not exactly identical. The *u* of the ending *-ture* varies between ə, u, and iū, *nature* being heard as nē'chər or nē'chur, and *literature* as lit'ər-ə-chūr or lit'ər-ə-tiūr, or sometimes lit'ər-ə-chur or lit'ər-ə-chə(r).

Examples of u: *push, pull, handful, could, hood, manhood, issue.*

Examples of ū: *rule, rude, blue, lute* (see below, under iū), *pool, mood, balloon, ghoul, soup, détour.*

(10) ʊ and ʊ̄.

The symbol ʊ denotes the so-called "short u" of *but*, which is much more common than u. It is apt to be prolonged before a voiced consonant in emphatic monosyllables, as in *buzz, fund*. But this long ʊ, which easily takes care of itself, is left without a symbol, ʊ̄ being used for a vowel of slightly different quality, heard only before r. In the ordinary spelling ʊ̄ is denoted in a variety of ways.

Examples of ʊ: *but, cud, buzz, fund, gunned, insult, blood, rough.*

Examples of ʊ̄: *burn, learn, fern, urn, girl, whorl, return, concern.*

(11) ə.

The symbol ə may be called the low unstressed vowel, ɪ being the high. The position of the tongue in uttering it is nearly the same as for ʊ, but the difference between ə and ʊ is clearly audible in such pairs as *sup, hyssop; luck, hillock; sum, winsome*. Almost any vowel, especially any low vowel, tends to become ə when unsupported by the stress. The tendency toward ə is stronger in southern English than in northern. In the United States there is a difference of usage in the pronunciation of certain endings, notably *-or, -tor*, and *-ment*, ɵ or e being heard in formal utterance, ə in ordinary talk. Thus, *senator, monument, president* are ordinarily sen'ə-tər, mən'yu-mənt, prez'ɪ-dənt, but in more formal utterance sen'ə-tor, mən'yu-ment, prez'ɪ-dent. The great majority of the common unstressed endings have ə, with little or no variation of usage. Compare *urban, gallant, balance, potence, potent, quotient, farmer, famous, potion, righteous, factious, crocus, kingdom*. The unstressed prefixes *ad-* (*ac-, af-, al-, an-, as-*), *ob-* (*oc-, of-, op-*), *con-* (*col-, com-, cor-*), *sub-* (*suc-, sup-, sur-, sus-*) often have ə in common speech, but the distinct vowel is heard in more formal or precise utterance, altho much shortened.

(12) ɑi and ɑu.

The symbol ɑi is used for the diphthong commonly called "long i," and ɑu for that heard in *now*. In both symbols the first element varies somewhat. In parts of the United States *house* is not pronounced hɑus, but haus, or even heus, but ɑu may be regarded as normal.

Examples of ɑi: *aisle, kaiser, rite, right, ibex, sleight, cry, die, dye.*

Examples of ɑu: *sauerkraut, now, thou, bough.*

(13) ɵi.

The symbol ɵi is used for the diphthong heard in *avoid, choice, noise, hoist, alloy, boy, toy.*

(14) iu and iū.

What is popularly called "long u," as in *tube*, is denoted by iū, and iu is used for the same sound when shortened in an unstressed syllable, as in *mutation*. In southern English regularly, and to some extent in the United States, the sound is a diphthong consisting of a fully rounded ū as in *pool*, preceded by the palatal semivowel. This pronunciation would properly be denoted by yū; thus, for *tube, Tuesday*, we should have tyūb, tyūz'dɪ, rather than tiūb, tiūz'dɪ. But many speakers, probably the majority of Americans, pronounce *tube* and *Tuesday* without the palatal semivowel and with a *u*-sound slightly less rounded than the ū of *pool*. This pronunciation is not well represented either by tyūb, tyūz'dɪ, or by tūb, tūz'dɪ. It is this *u*-sound, which may or may not be diphthongal, that is denoted by iū. To a certain extent this sound is heard even after r and l, where no y is pronounced. Thus *lute* (liūt) is distinguished from *loot* (lūt).

Examples of iu: *curator, duration, mulatto, superior.*

Examples of iū: *cute, dew, few, feud, suit, lure, mutual.*

B. Consonants and Semivowels.

The symbols are: b, d, f, g, ŋ, h, j, ch, k, l, m, n, p, r, s, sh, t, th, th, v, w, y, z, ʒ. Of these, b, d, f, h, k, p, t, v, z have the familiar and unmistakable sounds heard in *be, do, fee, he, key, pea, tea, vow, zest;* g sounds always as in *get*, never as in *gem*, and s always as in *sit*, never as in *rose* or in *sugar*. These eleven letters, then, require no further explanation.

(1) ŋ.

This denotes the guttural nasal heard in *sing, singer*. It is a simple sound, not a compound of n and g. The *ng* of *finger* is composed of ŋ + g (fiŋ'gər), the *nk* of *bank* of ŋ + k (baŋk).

(2) ch and j.

These denote, respectively, the composite consonants heard voiceless in *chew* and voiced in *jaw*. Phoneticians analyze the former as consisting of t + sh, the latter as consisting of d + ʒ. The presence of a *t* and *d* is recognized by the ordinary spelling in such words as *batch, badge*. It is to be observed, however, that ch does not consist of a complete *t* as in *tin* followed by a complete *sh* as in *ship*, but rather of a variety of *t* followed by a variety of *sh*. The elements blend in such a way that each loses a part of its phonetic character, and the result is virtually a simple sound. In the sentence *that shall never be*, no matter how rapidly one may speak it, the words *that shall* never make an exact rime to *satchel*, as they would do if ch were exactly t + sh. A similar statement would hold of the equation j = d + ʒ. It is this consideration which justifies the retention of the familiar symbols, in lieu of tsh and dʒ, for these sounds.

(3) l, m, n, r.

Both the initial sound of *let, met, net, red*, and the final sound of *able, prism, fasten, flour*, are denoted by these letters respectively. The final sounds are called syllabic *l, m, n, r*, it being a peculiarity of these open consonants that they may partake of the nature of a vowel and form

a syllable. Phoneticians usually distinguish syllabic *l, m, n, r* by a diacritic mark and are thus enabled to show the difference between the l of *battle* and that of *battling;* the *m* of *prism* and that of *prismatic;* the *n* of *lighten* and that of *lightning;* the *r* of *center* and that of *central.* As noted above in § 5, the alphabet employed in Key 1 ignores this difference. In most cases syllabic *l, m, n, r* derive from an ordinary *l, m, n, r* preceded by an unstressed vowel which first became ə and was then still further reduced to the slight vocalic resonance peculiar to the consonant itself; thus *little* was formerly *litel,* pronounced lit'el, then lit'əl, finally lit'l. In the case of many words in *-al, -el, -an, -en,* etc., there is a difference of pronunciation: thus some pronounce *metal, pedal, idol* as met'əl, ped'əl, ai'dəl, while others do not distinguish these words from *mettle, peddle, idle.* On account of this divergent utterance it is often hard to say what the prevailing usage is—whether -əl, -əm, -ən, or simply syllabic l, m, n; but the tendency is toward the latter. One hears ped'ənt and ped'nt, ūr'bən and ūr'bn, etc. In the ordinary spelling syllabic *m* appears as simple *m* in *-ism, chasm, prism,* and some other words, but as *-am* in *madam, Adams,* as *-om* in *bottom,* etc. Syllabic r appears as *r* sometimes after a long vowel or diphthong, as in *flour,* but after a consonant always as *-ar, -er, -or,* etc. Such words are respelled -ər, as riv'ər, mār'tər, not riv'r, mār'tr, etc. On variant pronunciations of this letter, see under R in the Dictionary.

(4) ſh and ʒ.

These are the signs employed, respectively, for the voiceless and voiced palatal sibilant heard in *ship, azure.* On the analogy of ſh a tied zh might seem to be the logical symbol for the voiced sound, but, unlike *sh,* zh has no currency in English spelling. As this latter is a simple sound, it has been thought better to introduce the simple letter ʒ to represent it, rather than to introduce an unfamiliar composite symbol for this purpose.

(5) fh and th.

It was explained above in § 5 that these letters are simply a concession to English visual habit and take the place of the Anglo-Saxon þ and ð, now usually employed in phonetic alphabets. They have the sound of *th* in *thin* and *th* in *this* respectively.

(6) w and y.

These have the sounds of *w* in *wet* and *y* in *yet,* respectively. Neither is used as the final element of a diphthong. Such spellings as *blow, blowing, say, saying* appear as blō, blō'iŋ, sē, sē'iŋ.

9. Foreign Words and Proper Names.

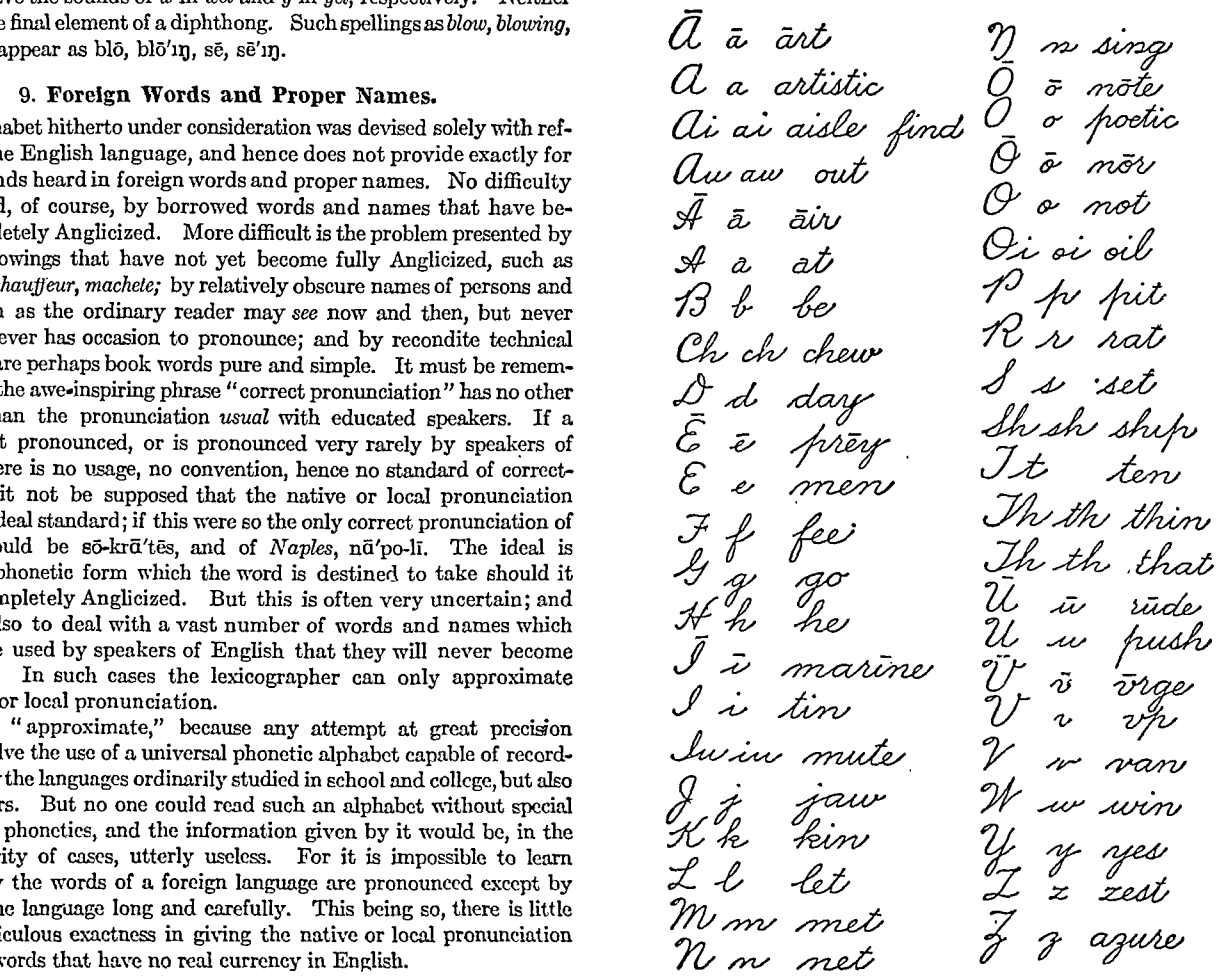
The alphabet hitherto under consideration was devised solely with reference to the English language, and hence does not provide exactly for certain sounds heard in foreign words and proper names. No difficulty is presented, of course, by borrowed words and names that have become completely Anglicized. More difficult is the problem presented by recent borrowings that have not yet become fully Anglicized, such as *hinterland, chauffeur, machete;* by relatively obscure names of persons and places, such as the ordinary reader may *see* now and then, but never *hears* and never has occasion to pronounce; and by recondite technical terms that are perhaps book words pure and simple. It must be remembered that the awe-inspiring phrase "correct pronunciation" has no other meaning than the pronunciation *usual* with educated speakers. If a word is not pronounced, or is pronounced very rarely by speakers of English, there is no usage, no convention, hence no standard of correctness. Let it not be supposed that the native or local pronunciation affords an ideal standard; if this were so the only correct pronunciation of *Socrates* would be sō-krā'tēs, and of *Naples,* nā'po-lī. The ideal is really the phonetic form which the word is destined to take should it become completely Anglicized. But this is often very uncertain; and we have also to deal with a vast number of words and names which are so little used by speakers of English that they will never become Anglicized. In such cases the lexicographer can only approximate the native or local pronunciation.

We say "approximate," because any attempt at great precision would involve the use of a universal phonetic alphabet capable of recording not only the languages ordinarily studied in school and college, but also many others. But no one could read such an alphabet without special training in phonetics, and the information given by it would be, in the vast majority of cases, utterly useless. For it is impossible to learn *exactly* how the words of a foreign language are pronounced except by studying the language long and carefully. This being so, there is little use of meticulous exactness in giving the native or local pronunciation of foreign words that have no real currency in English.

In this edition of the STANDARD DICTIONARY there are no separate lists of proper names. But as there was to be but one vocabulary and the key to pronunciation was to be repeated on every page, it was obviously impracticable to employ a different alphabet or to introduce many new symbols for the foreign words and proper names. It was therefore decided to use the N. E. A. alphabet as it has been described, with the addition only of those special symbols which were employed in the first edition. These are n̈ to denote nasality of a preceding vowel; ʜ for the Scotch *ch* in *loch* (German *ch,* whether voiced or voiceless, guttural or palatal); and ü for French u (German ü), whether long or short. It should be distinctly understood that the pronunciations given, except in the case of words fully Anglicized, are but rough approximations.

The pronunciation of Latin presents a case by itself. Within the last few decades the so-called Roman pronunciation has been very generally adopted in the schools both of the United States and of England. The old-fashioned English pronunciation is no longer learned, or is learned only to a limited extent, and will soon become obsolete, so far as the reading of Latin authors is concerned. It persists, however, and will long persist, in proper names and in numerous words and stereotyped phrases pertaining, more especially, to law and medicine. Popular usage is already divided between the old and the new: one hears ē prai-ō'rai and ā prī-ō'rī; man-dē'mus and man-dā'mus (oftener man-dam'us). The ending *-itis* is regularly pronounced -ai'tis by Englishmen, while in the United States -ai'tis and -ī'tis are about equally common. And there are other such cases of conflicting usage. It is probable that with the lapse of time the Roman pronunciation will prevail more and more, since modern scholarship is overwhelmingly in its favor. At the same time, the present facts have to be recognized. When the Dictionary gives the pronunciation of a Latin word or phrase according to the English method, it should by no means be understood that a preference for that method is thereby expressed. If, for example, *nisi prius* is given as nai'sai prai'us, the meaning is simply that the lawyer is apt to call it so in the court-room, albeit the same lawyer would probably say nī'sī prī'us if he came upon the phrase in reading aloud from a Latin author.

10. Script for the Revised Scientific Alphabet.



11. Pronouncing by Use of the Old Alphabet.

Each respelling in the Dictionary is repeated in the familiar alphabet with diacritics, this notation being called Key 2. In Key 2 the vowels marked with a macron represent the sounds now commonly called long, and those with a breve represent the sounds commonly called short. The two diacritics indicate, except for the letter *o*, actual difference in quality of sound, not merely in quantity. The various letter-sounds are described above and in the articles treating the letters in alphabetical place in the vocabulary. References follow to the divisions (1), (2), etc., of the section "A, VOWELS AND DIPHTHONGS," above, for the sounds of the marked vowels. Unmarked vowels are explained separately.

For ä as in *art*, see (2). In Key 2 ä is always used for this sound, without distinction of length.
For ā as in *fate*, see (4). For ă as in *fat*, see (1).
For â as in *bare*, see (1). For à as in *ask*, see (3).
For a as in *what* and a as in *all*, see (8). These are the same as ɵ and ō of Key 1, ŏ and ô of Key 2.
For ē as in *me*, see (5).
For ĕ as in *met* and e as in *fête*, see (4). The sound of e is the same as that of ā.
For ê as in *bear*, the same sound as â, see (1).
For ē as in *fern*, see (10). For ı as in *tin*, see (5).
For ī as in *bite*, see (12).
For ĭ as in *girl*, see (10). This is the same as û and ē.
For ī as in *marine*, the same sound as ē, see (5).
For ō as in *go*, see (7). For ŏ as in *not* and ô as in *corn*, see (8).
For o as in *woman*, o͞o as in *boot*, and o͝o as in *book*, see (9). These are sounds more commonly represented in regular spelling by u as in *full* and ū as in *rude*.
For ȯ as in *son*, the same sound as ŭ, see (10).
For o as in *tomb*, the same sound as u, see (9).
For ū as in *cute*, see (14). This is the sound noted in Key 1 by iū or iu (internal) and yū or yu (initial). Only the internal sound is noted by ū in Key 2, length being disregarded.
For ŭ as in *cut* and û as in *burn*, see (10).
For u as in *put* and u as in *rule*, see (9).
For the diphthongs ou, ow, see (12), and for oi, oy, see (13).

In Key 2 the plain vowel letters are used in obscure syllables, corresponding to ə and ı of Key 1. See (6) and (11). An exception is made in the use of o, in using it for the obscure sound in closed syllables as in *action*, *kingdom*, and for the o in *obey*, *history*, where the sound of ō is heard lessened in quantity. In closed syllables having the sound of o as in *obey*, seldom or never occurring in English words, ō is used in Key 2. Thus, in the German pronunciation of *Humboldt*, the second syllable is given as -bolt in Key 1, -bōlt in Key 2.

In Key 2 y is used as a vowel exactly like i.

Consonant sounds are the same in both keys, with the following exceptions: In Key 2 the digraphs ch, sh, th as in *thin*, and zh are without the tie-mark used in Key 1. See B (2), (4), and (5).

For th, as in *this*, see B (5). For j, see B (2).
For ng as in *sing* and n as in *ink*, see B (1).
In Key 2 the k-sound of c is noted by c and the s-sound by ç. These are always k and s in Key 1.

12. The Division of Words into Syllables.

Division of words into syllables is indicated in the vocabulary titles by insertion of hyphens and accent-marks as intended for practise in writing and printing. This work has been entrusted as a special department to Mr. F. HORACE TEALL. Respellings, the purpose of which is precise phonetic analysis, often necessarily differ in division from that shown in the titles, but agreement is preserved when possible. The approved division is always that shown in the heavy-faced print. Some words showing the conflict noted are *addi-tion*, *divi-sion*, *mea-sure*, *commu-nion*, *a-lien*, *na-tional*, *pecu-liar*, *spe-cial*, which are respelled a-dish'ən, dı-viz'ən, mezh'ur, kə-mīūn'yən, ēl'yen, nash'ən-əl, pı-kiūl'yər, spesh'əl.

The practise shown in the vocabulary is so simple and so unmistakably uniform that no elaborate system of rules is necessary. Every essential point is comprehended in the following four rules:

Rule I.—A consonant or a digraph or trigraph between two vowels goes into the later syllable when the first vowel is long, half-long, or obscure (except *-er* as in *gen-er-al*); as, *fa-tal, sea-son, sepa-rate, pro-gram, seda-tive, omi-nous, mecha-nism, pecu-liar, pro-phetic, medi-cal, practi-cal, fa-ther, me-tallic, mo-nopo-ly, pre-sent (v.), de-throne, ca-pacity, pro-gress (v.), ca-pable, proce-dure.*

Rule II.—A consonant between two vowels goes into the earlier syllable when the first vowel is short and has any stress; as, *prod-uct, prog-ress (n.), rap-id, pres-ent (n.), vis-it, ton-ic, bus-y, crit-ic, proph-et, prophet-ic, cyn-ic, fath-om, flor-id, char-ity, sep-arate.*

Rule III.—Adjoining consonants usually separate into two syllables; as, *at-tract, con-demn, pam-phlet, syl-lable, prac-tical, moun-tain, infan-try, connec-tion, produc-tive, detec-tive, suc-ces-sor, defen-dant, cor-respon-dent, as-sis-tant, mat-ting, com-pel-ling, fret-ted, En-gland.*

Note.—Doubled consonants ending a primitive word are kept together before a purely English suffix; as, *tell-ing, hiss-ing.*

Rule IV.—Purely English suffixes (*-ed, -er, -est, -eth, -ing, -ish, -y*) are always kept distinct (except when the terminal letter of the primitive word is repeated, as in *compel-ling*); as, *heat-ed, hat-ed, bak-er, speak-er, speak-est, wak-eth, search-eth, hast-ing, baptiz-ing, brak-ing, break-ing, freak-ish, head-y.*

Note.—Terminations like *-al, -ant, -ent, -ive, -or* are treated as merely Anglicized endings (usually of Latin or Greek words taken into English entire, but with terminal change), not as separable English suffixes. Thus such confusion as *music-al, practi-cal, conjunc-tive, disjunct-ive, abun-dant, defend-ant*, which is found in some other works, is avoided. The treatment here given makes every one of these terminations begin with the consonant.

13. Spelling Reform.

The subject of spelling reform has lately received a large amount of attention, owing to the activities of the Simplified Spelling Board in the United States and the Simplified Spelling Society in Great Britain. Some simplifications, not at all radical in their character and consisting mainly in the dropping of superfluous letters, have already been promulgated. From the nature of the case these modified spellings will come into general literary use but slowly, if at all, but the weight of expert authority behind them clearly requires that they be taken note of in a dictionary for the people. As in all matters involving technical knowledge, the opinion of one expert is worth more than the practise of multitudes who have never studied the subject and merely follow the fashion as they have learned it. The proposals of the Simplified Spelling Board are recorded in this Dictionary. The rules adopted by the Board will be found in the APPENDIX, page 2780.

The scientific test of good spelling is tolerably simple. A language is well spelled if, when one has learned the letters and their sounds and has had practise enough to beget facility in their use, one can write correctly any new word that one hears and pronounce correctly any new word that one sees.

If now we apply the scientific test of good spelling to the English language in a large way, it will appear that much of it is good just as it stands. This is true of an immense number of monosyllabic words containing short vowels, and of a far larger number of polysyllabic derivatives from the Latin. Then there is another large group of words of which the spelling is not ideal, but good enough for practical purposes. It is a great mistake to speak of English spelling as if it were altogether bad and needed to be thrown into the melting-pot and recast. But there is a third portion which *is* bad in varying degrees of badness, and unfortunately this third portion comprises a pretty large number of the commonest words in the language—words of Germanic origin containing a long stressed vowel or a diphthong. If *go* is a good spelling, then it is obvious to any one that *though* and *road* and *door* and *hoe* and *note* are not good spellings. The lack of a uniform, or at least approximately uniform, notation for the long stressed vowels and diphthongs is the deep-seated fundamental fault of our spelling. Any reform which does not correct that will only touch the fringe of the difficulty.

How our spelling came to be so confused, so far as it is confused, is now well known to experts in English philology. Speaking very generally, the trouble is due to an ancient confusion of the phonetic standards of Anglo-Saxon and Norman French; to the retention of old spellings after they had ceased to be phonetically correct, and to the introduction of new spellings patterned after conflicting analogies or supposed to convey valuable information—which was often misinformation—about the etymology and provenience of words. The resulting chaos is not at all mysterious. We should have lost nothing precious, but should have gained very much, if our spelling had kept pace with our speech and were to-day as good, say, as that of Spanish.

The obstacle is the inertia and the prejudice of habit. The adult who has once learned to spell will always find it easier to go on in the beaten path. No matter how bad the path may be, it will always be for him personally the line of least resistance.

The reform must be solved gradually in the elementary schools. The associations that cluster about words are not transmitted from one generation to another. Each child acquires them for himself, and they can be made to cluster as fully about a good spelling as about a bad. In countless instances we have actually improved on the orthographic practise of our ancestors.

METHOD OF COMPOUNDING WORDS.

PROFESSOR W. D. WHITNEY, in his book on *The Life and Growth of Language*, speaks of "a process which the general history of language shows to be more important than any other," and then says: "It is the composition of words, the putting two independent elements together to form a single designation." He shows distinctly that he includes here the union of word-pairs with a hyphen by citing *rest-day, learning-knights,* and *head-dress.* This is stated as a general language fact, not merely as English.

In such matters the lexicographer's record must show selection, especially in English, and undoubtedly that selection should accord with the best usage, as decided by some person or body of persons. For this Dictionary, originally, the decision was made by submission of the question, with the fullest possible detail, to hundreds of the men best qualified to answer it. But the department was controlled by one man, Mr. F. HORACE TEALL, who has again controlled it throughout the remaking. Mr. Teall had published the only book that ever treated the subject exhaustively, *The Compounding of English Words,* and was chosen because that book proved his fitness. The prevalent confusion of ideas had been shown in letters received before then, one of which, a fair sample, said, "I always use a hyphen whenever two words are to be written as one," and proved that its writer did not do so by containing *when* and *ever* united without a hyphen. Again, the question was, When should two words become one? And this was not answered at all.

Mr. Teall's first work for the STANDARD DICTIONARY was the making of a list of more than forty thousand words showing his answer to the question as he offered it for embodiment in the work. That list was printed separately and sent to scholars the world over—some even to Australia—with requests for suggestions and criticisms. Practically no criticism came, but much enthusiastic commendation; and the list was finally adopted for the Dictionary. Some persons, especially printers, say that fashions change in such matters so that what was once good is so no longer; but this is only an evidence of the common confusion, which is and has been always present in practise, and the forms selected originally are still held to be the best.

Every important dictionary of the English language published before 1890, and every one since then except one, has included thousands of word-pairs joined with the hyphen. Of course but one reason could be assigned for this practical universality of method, so far as the earlier workers had any definite policy in this respect. The similarity resulted from the fact that so only could they record the best usage, and that what they so recorded was best not only according to practise among leading writers and printers, but also in keeping with the art of grammar. Not only have the best writers used hyphened compound words, but every grammarian who ever taught anything about them has evidently striven to lay a basis for analogical decision. Many grammar text-books merely say that some compound words are written with a hyphen and some as continuous words, and then say, "Consult the dictionary."

The exceptional dictionary alluded to above is the one that very many people will consult, and they will find there *countingroom, dining room, drawing-room; taleteller, story-writer, letter writer; ropemaker, love-maker,* but *lace maker* and others (the two-word forms not given as titles); *devilfish,* but *angel fish;* these being merely a few specimens that indicate lack of system. Such differences found so frequently make it impossible for any one to know in a given instance without looking in the book whether this authority uses one form or another, except as frequent looking happens to impress a few distinctions upon the memory. Certainly no one can ever learn all the differences just as they appear in the book.

In that dictionary are *backbone, breastbone, jawbone,* but *cheek bone, haunch bone, hip bone, thigh bone;* in this work each bone-name is given with a hyphen, except that *backbone* is given for the figurative sense. Provision is necessary (or at least more comfortable) for the use of one form for each literal name.

It is simply impossible to eliminate inconsistencies of form from the English language, even if it could be proved desirable to do so. No phase of the language is less amenable to such stricture than the question when to compound and when not to compound. Mr. Teall's claims are stated below. His platform as to consistency may be formulated in words used by Lindley Murray in writing about verbs: "A principle may be warrantably adopted, and carried to a precise convenient extent, without subjecting its supporters to the charge of inconsistency for not pursuing it beyond the line of use and propriety."

No principle of language can be adduced in support of a choice of form for *counting-room, dining-room,* or *drawing-room,* or for *story-writer* or *letter-writer,* or for *angel-fish* or *devil-fish,* that is not equally potent in every exactly similar instance. Various groups of similar words must have similar forms if they are to be on a basis of comfortable agreement; but no single group can ever be so absolutely differentiated that any critic could not find a point of objection, or at least of question.

A close study of English literature has been made and a system constructed in accordance with the rules of grammar, which was modified somewhat by such fully established usage as does not follow those rules. The aim has been to give a full exposition of the forms used by the best writers and printers, with the additional feature of an analogical systematizing of the forms in general literary use, so far as the genius of the language will permit. The editor believes that he thus comes closer than any of his predecessors to an actual record of prevailing good usage, and that he has provided a selection of forms worthy of adoption without change.

Each form is based upon grammatical analogy, according to the following

General Principles.

1st. That all words should be separate when used in regular grammatical relation and construction, unless they are jointly applied in some arbitrary way.

2d. That abnormal association of words generally indicates unification in sense, and hence compounding in form.

3d. That no expression in the language should ever be changed from two or more words into one (either hyphened or solid) without change of sense.

The first of these principles forbids joining an adjective and a noun in regular use (including in the classification as adjectives all words used with clear adjectival force); as, *spinal column, chestnut horse, brick house, fellow citizen, he bear, man servant, brother officer, Armstrong gun.*

Arbitrary application of such terms requires that they should be joined. Thus we have *blue coat* for the coat itself, but *bluecoat* for a man, and *redhead* is the common form of the name of a duck with a *red head.*

The first principle, moreover, keeps a regular adverb separate from the adjective it modifies, even when the two express one attribution; as, "*highly colored* wings," "*recently published* book."

The second principle makes two nouns used together as one name become one word, if the first is not really attributive. Thus, while *brick* is attributive in *brick house* (a house made of bricks), it is *not* attributive in *brick-yard* (a yard where bricks are made). *Brick* in the first instance has the same qualifying sense that *bricken* would have if that were used, and so is an adjective, properly standing alone; but in the second instance it has no sense other than the naming of what is made in the yard, and no quality or attribute of the yard is noted, except in the name as a whole.

The second principle requires compounding:

1. When two adjectives, a noun and an adjective, or any two or more parts of speech are abnormally associated to express one

attribution; as, a *down-stairs* room; *dark-brown* hair, or hair that is *dark-brown;* a *well-known* man; *knee-deep* snow, or the snow is *knee-deep;* *free-trade* doctrines; a *silk-and-cotton* fabric; *North-American* birds.

2. When one of two words used together as a verb, an adverb, or any part of speech, is in such use not placed in accordance with a rule of grammar; as, to go *down-town;* to *halter-break* a horse; a *cross-action;* a *counter-complaint; broad-mindedly; after-ages.*

Rules for Selection of Forms.

The legitimate conclusion from these principles is, that if one term having elements of certain kinds is properly a compound word, so is every other exactly similar term. The following categories or rules are thus obtained:

1. Every name that shows mere ellipses and inversion of a phrase containing two nouns is a compound noun.

A "box for a hat" is commonly called a *hat-box;* "a brush for the hair," a *hair-brush;* "a stove for cooking," a *cooking-stove* or *cook-stove.* It may be safely affirmed that *hat-box* is printed as a hyphened compound word much more frequently than it is printed as two words, and the same is true of *hair-brush;* so we select the compound form as fixed in the best usage. *Pill-box, shoe-box, paper-box, ribbon-box,* and *collar-box* properly have the same form as *hat-box,* and so on through the entire range of known or possible boxes that may be named by the word *box* preceded by the name of what the box is to contain. As of *boxes,* so of *brushes,* and so also of everything named in this way—every such name, except as noted below, is given as a hyphened compound word. Some names that are unquestionably compounds in their nature have never been so written, and it would be pedantic to insist that they should be. In usage, almost universally, such words as *company, association, asylum,* have been kept separate, as in *railroad company, racing association, insane asylum.* There is no *error* in writing any one of these as a compound, but there is no urgent reason for doing so.

Seeming Exceptions.

I. Some uses in which the first of two nouns really stands as an adjective are as follows:

(1) With the sense "made of," as in *silk dress, brick house, feather bed, pumpkin pie, stone wall.*

(2) With the sense "having the shape or the character or quality of," as in *barrel vault, alligator forceps, companion picture, he bear, man milliner, man servant, boy bishop, bull calf, brother officer, fellow citizen, mesh structure.*

(3) With the sense "pertaining to, suitable for, or representing," as in *parlor clock, city officer, district attorney, government employee, railroad supplies, insurance office, church furniture.*

(4) With the sense "characterized by," as in *diamond ring, cylinder press, cupola furnace.*

(5) With the sense "situated in, having a character naturally implied from situation or connection," as in *mountain streams, country gentleman, ocean steamer, school etiquette, society manners.*

[In specific names of this kind, however, compounding is required by the fact of specification, which is merely naming. For some common compounds other than such purely specifying names no reason is apparent, unless accent be taken as a reason; but here the indefinable border-line that exists in all human affairs seems to be encountered. Thus (*a*) we have *sea-anemone, sea-gull, field-mouse, house-fly, mountain-fringe* (a plant), etc., and, (*b*) while we say and write as two words *o''cean steam'er,* we say as one word *wa'ter-an''imal,* and it should be so written.]

(6) With the sense "acting in support of, advocating," as in *Jackson voters, silver advocates, silver man, prohibition speaker.*

(7) With the sense "residing, existing, or originating in, or coming from (a place)," as in *Brooklyn politics, Bath brick, New York schools, Florida oranges.*

(8) With the sense "originated or made by, or named after," as in *Armstrong gun, Williams College.*

II. *Apposition.*—Placing two nouns in apposition is very nearly the same in effect as using the first as an adjective, the difference being that in a case of real apposition either word may be used alone for the thing named, as in *monarch oak, knight templar, knight companion.*

2. Possessive phrases used as specific names are compound words.

Literature exhibits such names of plants, etc., in different forms. Certain books have some of them compounded and others as two words; as, *hare's-tail* for one plant and *lion's tail* for another. Certain other books have the difference reversed; as, *lion's-tail* and *hare's tail.*

It is absolutely impossible to make a record of the use of these names showing differences in form that can be proved to be established. Every such name given in this Dictionary is joined by a hyphen, except a few long established in continuous form, as *colts-foot, sheepshead.*

3. Some words representing phrases in literal sense have become established in the solid form; as, *sunbeam, daylight, hillside, loophole.*

4. Some generic nouns are used, in certain classes of names, almost like mere suffixes; as, *man, way, weed, wort.*

Words like *footman, coachman, airway, entranceway, milkweed, seaweed,* and *motherwort* have the solid form in this Dictionary.

Every specific name of a fish that has a monosyllabic specifying element, with *fish* as the generic element, is given in continuous form; as, *goldfish, bluefish, hogfish.* Longer names of this kind (except *cuttlefish* and *silverfish*) have the hyphen.

5. Most words used to designate something named from having as a characteristic or adjunct that which is expressed by the elements of the name are given in the solid form.

A man who wears a *blue coat* is called a *bluecoat;* a man who watches or *looks out* is called a *lookout,* and said to be "on the *look-out*"; a plant that looks like a *golden rod* is called *goldenrod;* a fish with a *gilt head* is called the *gilthead;* and many other things are named in this way—by making a word of the two words naming a prominent feature, likeness, characteristic, or the like. Predominance of the solid form in literature for such names is easily provable, tho they are printed in all three forms—two words, hyphened, and continuous. Exceptional use of the hyphen in this work occurs in words that are made clearer by it, as *mouse-ear, abscess-root.*

The forms given in heavy type throughout the Dictionary are very carefully selected and recommended for use, even if an occasional form found in the text is not the one given in the vocabulary for the same word. Care has been exercised to make the vocabulary and the text agree throughout; but, as many compounds may properly be written either with or without a hyphen, it is much more than probable that absolute agreement in this respect has not been attained.

FOREIGN LANGUAGE CHART.

The following table shows the usual values of the various letters and combinations of letters in the alphabets of the several foreign languages included in its scope. In column 2 the modern English alphabetic characters, and some of their combinations, are given for comparison with the foreign. For convenience the phonetic symbols of the Revised Scientific Alphabet, listed with English key-words in the first column, are numbered consecutively from 1 to 59, these numbers being repeated at the right-hand margin of each page, and, together with the symbols, at the left-hand margin of the second page. The figure before a letter in a language column indicates the number of such letter in its alphabet, and the small figure at the right of a letter gives the number of the explanatory note below referring to that letter. Thus, in line 16 (phonetic symbol "g as in *go*"), there stands in the Danish column "7 g[6]." By this is meant that *g* is the seventh letter in the Danish alphabet, that it is (sometimes) to be pronounced as *g* in the English word *go*, and that the conditions in which the letter has this value are stated in remark 6 in the *Notes* on Danish.

Letters placed in parenthesis-marks are either variants or else call for special attention because they stand for a sound a little different from that represented by

GENERAL REMARKS ON SOUNDS FOREIGN TO ENGLISH.

[Explanation.—In the following remarks and notes, all characters used as *letters of an alphabet* are set in italic form (Greek and Hebrew letters excepted), and all used as *phonetic symbols* are set in roman. That is to say, whenever a letter is italicized, the reader should call it "the *letter* so-and-so," and sound it as in the English alphabet (or, if preferred, in the alphabet of the language under discussion); when a letter is printed in the roman character, one should call it "the *sound* so-and-so," and pronounce it as directed in the column of phonetic symbols. The sign [=] is to be read "is pronounced as" or "pronounced as." For example, "*c* before *a, o, u*, = k" means "the letter *c*, when it stands before the letter *a, o*, or *u*, is pronounced as the sound k." Perhaps it should be added that letters and symbols introduced in the course of the remarks and notes are generally arranged not in alphabetical order but on the basis of the phonetic relations of the sounds that they represent.]

Syllables are called "open" when they end in a vowel. A single consonant between vowels, or any combination of consonants that can begin a word, is usually to be thrown with the following vowel. Hence a vowel, followed by a single consonant not final, is generally in an open syllable, but one followed by two or more consonants not final (unless the group is a combination that may stand at the beginning of a word) is in a closed syllable, because it is necessarily followed in its own syllable by a consonant. Thus, in *pi-per* the *i* stands in an open syllable; in *pil-fer* the *i* stands in a closed syllable. A vowel may be phonetically in a closed syllable, but the spelling may show that it was formerly in an open syllable, as in the English word *dale* (dēl), which in early Middle English was pronounced dā'le. The matter is of some importance because the length and the quality of vowels often depend upon whether they are (or were formerly) in an open or a closed syllable.

Other terms used in the notes, as "voiced," "voiceless," "palatal," "velar," "spirant," etc., will be found defined in the vocabulary.

An English-speaking person needs to be cautioned against pronouncing foreign long vowels as diphthongs. In English long ē with most speakers ends with a light *i* resonance (that is, as a diphthong, ēⁱ); long ō is generally turned into ōᵘ; long ū into ūᵘ. But in German, French, and European languages generally, these vowels are to be pronounced without the *i* or *u* element at their close. Foreign vowels are generally tenser than English vowels.

Vowels.

"Rounding" is the effect on a speech-sound of pursing the lips till the orifice is roundish, as in sounding English ū (*boot*). In English only back vowels are rounded; in some other languages certain front vowels are thus modified.

1. Rounded ɪ. To make it, say ɪ (as in *see, machine*), at the same time pursing the lips as for ū (in *rule*). The symbol used in this dictionary is ʉ.
2. Rounded ē. Say ē (as in *fate*), at the same time pursing the lips. This is the sound heard in French (*eu*), German (long ö), etc.
3. Rounded e or ə (really a sound between e and ə). Make such a sound, at the same time pursing the lips. The sound is heard in French (*eu*), German (short ö), Danish (ø), etc.

The English sound nearest to these last two is the ū of *burn* (būrn), and hence the symbol here used for these two rounded vowels is ʉ. But the foreign sounds are not exactly ū. This English vowel is made at the middle of the mouth (by raising the middle portion of the tongue), and the lips are only slightly if at all pursed. The foreign sounds are made in the front of the mouth (by raising the front of the tongue, as for ē and e respectively), and are strongly "rounded."

4. In several languages, e. g., French, are heard "nasal" vowels, that is, vowels to which a nasal quality is imparted from the fact that, while they are being sounded, the passage through the nose is open as well as that through the mouth. Hence part of the voiced breath escapes through the nose and reverberates in the nasal cavities. The nasal vowels are not vowels *followed* by n or ŋ, but simply vowels that receive their quality or *timbre* from resonance in both mouth and nose instead of in mouth alone. In this dictionary nasality in a vowel is indicated by adding to the symbol of that vowel the symbol ń; whence oń = nasal o, ań = nasal a, etc. Many Americans, in their normal speech, unconsciously pronounce some or all of their vowels with a nasal quality; hence they are in danger of making the foreign vowels too strongly nasal.

Consonants.

Consonants in foreign languages (with some exceptions) are more carefully, and often more firmly or energetically, enunciated than in English.

5. In Scotch (*ch*), German (*ch*), and some other languages there is heard a velar *spirant*, represented in this dictionary by the symbol н. The sound is made by raising the tongue at the back of the mouth (*toward* the position for k) until the breath makes a rasping noise as it is forced out through the narrowed place. It is the strong *h* heard in an emphatic *who* There is also a *palatal* spirant, the German *ch* heard in *mich*, and elsewhere after "front" vowels (i, e, ü). It is made by raising the front of the tongue (as if to whisper *yet*), and forcing the breath out with the tongue held tensely in that position. The sound is the strong *h* heard in an emphatic *hew*. When English *y* (*not* the whispered *y*) is prolonged, the sound is a corresponding *voiced* palatal spirant. The velar spirant н (in Scotch *loch*, German *dach*, etc.) may also be *voiced;* and such a sound is heard in German and Danish (intervocalic *g*), and elsewhere. The sound does not occur in English, but would be heard if one pronounced the word *auger* (ōgər) without raising the tongue for the *g* high enough to close the mouth passage completely. The velar spirants here described occur in association with a back vowel (ɑ̄, ō, ū), and the palatal in association with a front vowel (i, e, a, ü).
6. What one may call "palatalized" consonants occur in some European languages; they are a characteristic of Russian and Polish (Slavic languages), and of Hungarian. These consonants are made by combining the sound y with the normal consonants. Palatalized l, for example, is not l followed by y (as one hears it in *brilliant*), but l and y merged into one — an l made by raising not the tip of the tongue to the upper gums, but the front of the tongue to the front part of the palate above it. Palatalized n is made not by pressing the edge of the tongue against the upper gums, or roots of the upper teeth, as for normal n, nor by pressing the back of the tongue up against the back part of the roof of the mouth, as for ŋ (heard in *sing*), but by raising the front of the tongue just as for y, but further, until it is pressed against the front palate. After such a palatalized consonant there will almost unavoidably be a more or less distinct y heard as a glide to a following vowel; and the symbol used in this dictionary for these consonants is a combination of the appropriate consonant symbol with the symbol y (ny, ly, etc.). But such a symbol as ny is not to be interpreted as n followed by y, but as an n made at the same place in the mouth as *y is made*. It should be noted that the so-called *l-mouillé* in French (spelled *-il, -ill*) and in Hungarian (spelled *ly*) has in the best standard pronunciation ceased to be an l at all, but is pronounced simply as y.
7. For most of the voiced consonants there are corresponding voiceless consonants; as, b and p; d and t; etc. But there is in English no "voiceless" l. It is heard in Welsh, however, spelled *ll*. To make it, place

FOREIGN LANGUAGE CHART.

the parallel character in the column of phonetic symbols, the explanatory note giving the needful information in each case.

In the chart the several languages are grouped on the basis of their kinship, as follows: the Teutonic, the Slavonic, the classical (Greek and Latin), the Romance, and the Celtic, of the Aryan family; the Hungarian of the Altaic-Ural group; the Hebrew of the Semitic family. Such a grouping makes possible a comparison of the sound systems and of the spellings in related Aryan languages, suggesting how far the spelling has become archaic by the shift of the language sounds from an earlier basis approximately represented in classic Latin. The chart shows the general agreement of the continental (European) languages in the values that they assign to the vowel letters.

The chart, and the notes which accompany it, supply only the main or more usual values of the letters, and particularly these as they occur in native words. In loan-words, as noticed here and there in the remarks, letters often preserve the value they have in the foreign language from which the words are taken — a value often quite other than that normal to them in the native words.

NOTES ON THE SEVERAL LANGUAGES.

1, 2. English and Anglo-Saxon.

Both modern English and Old English (Anglo-Saxon) have the Germanic accent — on the root syllable. The Anglo-Saxon letters here given are the Roman letters as used in Britain at the time of the conversion of the Anglo-Saxons, with the addition of two runic letters, ƿ (wen) = w, and þ (thorn) = th, and the crossed roman d (ð), which was a variant of þ. In linguistic and phonetic work to-day, the last symbol (ð) is often used for th, in distinction from þ = th.

1. The diphthongs *ai*, *au*, *ei* are very rare in Anglo-Saxon manuscripts; *æg* = ay, in later Anglo-Saxon ai.
2. Anglo-Saxon *f*, þ (ð), *s* = usually f, th, s; but medially between a vowel and another voiced sound *f* = v, þ (ð) = th, and *s* = z.
3. Anglo-Saxon *g* was probably a voiced palatal or velar *spirant* (= voiced h; Gen. Rem. 5); but *gg* = g, and *g* before i, e, y, and final after a front vowel = y.

Further description and discussion of the letters and their sounds may be found in the vocabulary under the corresponding English letters.

3. Dutch.

Dutch words are accented as German: chief stress on the root-syllable, which is usually the first.

1. The Dutch vowel system is extremely simple. In open syllables, *a*, *e*, *i*, *o*, *u*, and in closed syllables *aa*, *ee*, *ii*, *oo*, *uu*, are pronounced as ā, ē, ī, ō, ū; and in closed syllables *a*, *e*, *i*, *o*, *u* are pronounced as a, e, i, e, u. *oe* = ū, *eu* = ū ("rounded" ē; Gen. Rem. 2).
2. The Dutch diphthongs are *aai* = ai; *ei*, *ej* = ai (almost ei); *au*, *ou* = ou (almost au); *ooi* = ōi; *eeu* = ēu; *icu* = iu; *ui* = ŭi (almost ei); *oei* = ūi; *uw* = ŭu. That is, Dutch diphthongs consist of the two vowel sounds indicated by their spellings, except that *ij* = ei.
3. *b*, *d*, *g*, as in English. But when final, *b* = p, *d* = t, *g* = h, unless the next word begins with a vowel or *b* or *d*. *dt* = t.
4. *f* and *s*, when followed by a vowel or *b*, *d*, become v and z respectiveiy.
5. *c* before *a*, *o*, *u* = k; before *e*, *i* = s.
6. *ch* (in native words) = h. Initial *sch* = sh; medial or final *sch* = s, and in the reformed spelling the *ch* is discarded. *J*: borrowed words, *ch* = k or sh, according to the source of the words.
7. *sj* after a "round" vowel (Gen. Rem. 1–3) is often pronounced sh; otherwise it is simply *s* followed by *j*, that is, sy.
8. After *k*, *p*, *t*, *ch*, *f*, *s*, the letters *v* and *z* are sounded as f and s; *bv* = pf, *gv* = hf; *bz* = ps, *vz* = fs, *gz* = hs.

4. German.

The German alphabet has three letters, *ä*, *ö*, *ü*, which are treated not as independent letters, but as forms of *a*, *o*, and *u* respectively. If these were counted, the alphabet would have 29 letters.

The chief accent of words is generally on the root syllables in simples and derivatives, and on the first member of compounds. German vowels are more explosively begun than the English or French: what phoneticians call the "glottal stop" (a faint cough) is usually heard before all accented initial vowels. This glottal stop prevents German words from "running together," as English and French words do.

1. The vowels are generally long in open accented syllables, short in closed accented or in open unaccented syllables; but the short vowel has approximately the same quality as the long. In the older spelling, now being discarded, a silent *h* after a vowel is a sign of length. *ei* = ai, *eu* = oi, *ie* generally = i.
2. There are several so-called "modified" (*umlaut*) vowels in German: *ä* = e (when long, it is really between e and a); *ö* when long = "rounded" ē; when short = "rounded" e or a (Gen. Rem. 2, 3); ü = "rounded" ī (Gen. Rem. 1); äu = ei. *ä*, *ö*, *ü*, *äu* are sometimes printed as *ae*, *oe*, *ue*, *aeu*.
3. *ch* is a velar spirant when following *a*, *o*, *u*, and a palatal spirant when following *e*, *ä*, *i*, *ü* (see Gen. Rem. 5); the symbol used in this dictionary is h. Before *s*, *ch* = k. In foreign words *ch* may = k (generally Greek words), or sh (generally French words).
4. *g* in native German words may in all cases be pronounced as g; but in present-day preferred usage it represents also two other sounds: (1) when final, it becomes equivalent to *ch* (that is, h; see Note 3 just above); and (2) when between vowels, it is pronounced as a *voiced* h (see Gen. Rem. 5).
5. German initial *h* is strongly aspirated — far more so than English *h*. It is often a silent sign of length in the preceding vowel, but the reformed orthography discards it in this value.
6. *c* appears only in non-German words. In these, before *a*, *o*, *u*, it is pronounced as k; before *e*, *ä*, *i*, as ts. In preferred reformed spellings it is replaced by its German equivalents.
7. *b* and *d* are sounded about as in English, except when final, or before a voiceless consonant, in which position *b* = p, *d* = t.
8. In foreign words not fully nationalized the foreign values are preserved; hence in these *u* = ü in words from the French, *y* = ü in words from the Greek.
9. *s* has the sound of s, or of z: *s* = s when final in a word or a syllable, when preceded by any consonant other

than *l*, *m*, *n*, *r*, and followed by a vowel, and when initial before *k* and *l*. *s* = *z* when initial before a vowel, and when between vowels or between *l*, *m*, *n*, *r*, and a vowel. In initial *sp-* and *st-*, *s* = *sh*.

10. In some words from the French, *qu* = k.

5. Danish.

In Danish, words are accented as in German.

1. *a*, *i*, *u*, whether long or short, are pronounced with the quality of ā, ī, ū; except that *i* when followed by *nd*, *ng*, *nk*, *nn*, *nt*, *rk*, *rr*, *kk*, or final *k*, is pronounced as a very short ē; and *u* before *ng*, *nk*, *m*, *rk*, *gt*, and in some monosyllables (especially before *k*) is sounded as o. *aa* when long = ō; when short = e.
2. *e* and *o* when long (accented in open syllables, or final in monosyllables, and generally in monosyllables ending in a single consonant) are pronounced as close ē and ō; but when short (in closed syllables, or in monosyllables ending with two or more consonants), they = e and e. Exceptions: final unstressed *e* = ə; long *o* followed by final *-ve*, frequently before *g* when it is a *voiced* H (Note 6 below and Gen. Rem. 5), and sometimes before final *r*, is sounded as ē.
3. *y* generally = ū (whether long or short); but (1) when before *nd*, *ng*, *nk*, *nn*, *nt*, (2) in a number of monosyllables, and (3) frequently before doubled consonants, *y* = ŭ ("rounded" ē; Gen. Rem. 2).
4. *æ* = e *lengthened* (not ē) when long (in open syllables, etc.), and e when short (in closed syllables, etc.). *ø* and *ö* = "rounded" ē and "rounded" e respectively (see Gen. Rem. 2 and 3).
5. Danish diphthongs end (1) in -i (represented in the spelling by *j*, or by *g* before *l*, *n*); as, *ej*, *aj*, *eg*, *ig* = ai, and *øj*, *øg*, *øj*, *ø̈g* = ei — more nearly ūi); and (2) in -u (represented in the spelling by *v* — see Note 10 below); as, *av* = au, *åv* or *aav* = ɔu, *øv* = eu, etc.; after *o*, *g* before *n* becomes u, whence *ogn* = oun.
6. (1) *b*, *d*, *g*, when initial = b, d, g; when medial between voiced sounds (vowels and voiced consonants) = b, th, and *voiced* H (Gen. Rem. 5) respectively; when final, = p, t, k. Exceptions: *d*, *g*, when final after a *long* vowel, are pronounced as when medial.

   (2) *p*, *t*, *k*, when initial, are strongly aspirated; medial between voiced sounds, they are pronounced as b, d, g, respectively; when final, as ordinary p, t, k. After initial *s-*, *k* = g, and *t* = d.

   All these letters, when final before a word that begins with a voiced sound are often treated as medial.

   There are exceptions to these rules; and in foreign words *b*, *d*, *g*, *p*, *t*, *k* generally have their ordinary values.
7. *c* (only in foreign words) = k before a, o, u, and consonants, and s before *e*, *i*, *y*, *æ*, *ø*.
8. *n* (before *k*), and *ng*, are sounded as ŋ.
9. *sj* is pronounced as *sh*; by some as sy.
10. *v* = v; but when followed by a consonant, and in some cases when final, *v* forms with the preceding vowel a diphthong; as, *av* = au; *æv* = eu; *ov* = ɔu, etc.

6. Swedish.

The stress in Swedish words is on the root-syllable. Diphthongs occur only in foreign words.

1. *a* when long, in open syllables = ā; short *a*, in closed syllables = a.
2. *e* in open syllables = ē; *e* short, in closed syllables = e; before *r* followed by a consonant, short *e* = a. Unstressed final *e* = ə. In a few words *e* = i.
3. Long *o*, in monosyllables, or when it forms or ends a syllable, = ū; in a few words before *rl*, *rd*, *l*, *v*, long *o* = ō. Short *o*, in closed syllables, generally = ɔ.
4. Long *u* and long *y* in an open syllable or in monosyllables = ū.
5. *å* (also spelled *aa*), when it forms or ends a syllable, = ō; in closed syllables, *å* = ɔ.
6. *ä* before *r* and another consonant = a (long or short); otherwise, *ä* = e (more exactly, between e and a).
7. *ö* = ŭ (sometimes "rounded" ē, sometimes "rounded" e; for the value, see Gen. Rem. 2 and 3).
8. *c* before *e*, *i* (*y*) = s; otherwise, *c* = k (except in some words from foreign languages). *ch* (in borrowed words) = k, ch, or sh, depending upon the source.
9. *f* medial (except before *s*, *t*) or final = v; otherwise, = f.
10. *g* before *e*, *i*, *y*, *ä*, *ö* (except before *e*, *i* in short unstressed syllables), or after *r*, *l* in the same root-syllable, = y; otherwise, generally = g. But *g* before *s*, *t* = k; *g*, when between a short vowel and *n* = ŋ; *g* before *e*, *i* in some foreign words = sh.
11. *h* = h; but it is silent before another consonant.
12. *k* usually = k; but before *j*, *e*, *i*, *y* (not in suffix-syllables), *k* = ch
13. *ng*, and *n* before *k*, = ŋ.
14. *sk* (before *e*, *i*, *y*, *ä*, *ö*), *sch*, *sj*, *skj*, *stj* = *sh*; *dj* = y. *sc* in endings *-scent*, *-scens*, *-scion* = sh.
15. *tj* = ch; *t* before *-ia* or *-ie* = ts; after a consonant, *ti* in *-tion* = *sh*; after a vowel, = ch.

7. Polish.

Polish words are accented on the penult (with a few exceptions, especially of words in *-ika*, *-yka*).

1. The Polish vowels are all short; consequently, when a symbol with macron is used to indicate the value of a Polish vowel (as when one writes *i* = ī), the symbol ī is to be understood as indicating a vowel of the *quality* of ī in *machine*, but of the *length* of i in *hit*. So ū, when used to interpret Polish *u* and *ó*, means a *short* vowel of the quality of ū in *rule*, not the short u heard in *good*. The vowel letters are generally consistent in value; but *i* varies, being pronounced as I, yI or ū (Note 2), or y (Note 9).
2. The letters *a*, *e*, *i*, *o*, *u* (and *ó*), *y*, represent the vowel sounds a, e, I, o, ū, and ū respectively, with the following exceptions: (1) *e* (*ie*) between l or a palatal consonant and a following "palatalized" consonant (see Note 8 below) is pronounced with a close ē quality, rather than e; but it is still a short vowel. (2) *i*, if *not* preceded by a labial consonant, l, or a velar k or g, is pronounced yI; if preceded by velar k or g, *i* is written for *y*, and so is to be pronounced ū. (3) *y*, when preceded by *sz*, *ż*, *cz*, *c*, *dz*, is written for *i*, and so is pronounced I. (4) *i* before another vowel is a consonant, and pronounced as a light y.
3. Most Polish vowels are heard also in a "palatalized" form, that is, with the sound of a light y before them. Initially this y is represented by *j*; elsewhere, the y is represented in the spelling by *i*.
4. The letters *ą* and *ę* represent nasalized vowels, oñ and añ respectively (see Gen. Rem. 4). But at the end of words the vowels lose almost all nasal quality.
5. Polish consonants approximately as English; but *cz* = ch; *dż* = j; *sz* = sh; *ż*, *rz* = z; *w* = v.
6. *ch* initial or medial = h; final, = H. The letter *h* appears in very few Polish words; it is merely equivalent to Polish *ch*.
7. When final, or before a voiceless consonant, all voiced consonants become voiceless; that is, *b* = p, *d* = t, *g* = k, *z* = s, *ż* (*rz*) = sh, *dz* = ts, *w* = f (the letter *f* appears only in non-Polish words).
8. Polish l has a sound peculiar to Polish (and Russian). It is made farther back in the mouth than English l, by raising the back of the tongue toward the hard palate instead of the tip of the tongue to the upper gums. In parts of Poland it is pronounced initially much like English w, medially like the second part of the diphthong au — that is, a light u or w.
9. All consonants (except labials) are slightly "palatalized" (see Gen. Rem. 6; and cp. a Virginian pronunciation of *car*, *garden*, as kɤ̈ā, gɤ̈ādn) when they are followed by the vowels described in Note 3 above. Three of the consonants are wholly altered: *d* becomes dz (spelled *dz*), *t* becomes ʦ (spelled *c*), *r* becomes ʒ (spelled *rz*). Certain of these palatalized consonants are heard also in other positions than before a y-vowel; they are then spelled with letters having an acute accent added (as *ǵ*, *ź*, *ć*, *dź*, *ń*). For their pronunciation, see Gen. Rem. 6.
10. The consonant y is heard in Polish only as the first part of the "palatalized" vowels (Note 3), or as a fleeting sound after the palatalized consonants (Note 9).

8. Russian.

The accent in Russian is of great importance in the pronunciation and also in the meaning of words; but it is so variable — shifting in the varying grammatical forms of the same word — that no brief rule can be given for it. Russian, like Polish, has no distinction between long and short vowels; its vowel spellings, however, are far less phonetic and consistent than Polish because Russian spelling, in some details, has remained unchanged for ten centuries.

Russian, as Polish, has two sets of vowels: (1) The so-called "hard" (or normal) vowels, *a*, Э, Ы, *o*, *y*, and (2) the so-called "soft" (or palatalized) vowels, Я, *e* (Ъ), И (*i*), (*ë*), Ю. It has further three consonantal vowels, two of which are heard (Й = light i, Ь = light y), and one generally silent (Ъ, formerly = u).

1. *a* = a when stressed; when unstressed it varies from a to ə, and in very light syllables following the accented syllable it becomes almost ə; when unstressed after Ж (ʒ), Ч (ch), Ш (sh), Щ (shch), *a* = e; and in the ending -aro, *a* = o. Э is infrequent in Russian words, but frequent in foreign words in the value of e. *o*, when stressed, or final, = o; when unstressed, however, o = ə (almost the same as unstressed *a*). *y* is always pronounced ū (but it is short). Ы approximates in quality the "obscure" vowel ɪ (heard in *renew*, rnɪū), but is not at all a "weak" or "obscure" vowel. It is somewhat like an ū pronounced without rounding the lips: tongue placed as for ū, lips as for I. After П (*p*), б (*b*), Ф (*f*), в (*v*), м (*m*), Ы is pronounced much like the *wi* in *wig*.
2. The so-called "soft" (or palatalized) vowels, Я, *e* (Ъ), И (*i*), (*ë*), Ю, all have normally a light y before them (cp. Polish, Note 3), and are pronounced approximately as ya, ye, yi, yo, yū; but when these vowels follow a consonant, the y-element is merged into the consonant, palatalizing it (see Note 6 below), and there is heard a very light y-glide between the consonant and the vowel.

   In detail: Я = yā, except when unstressed before Й (consonantal i; see Note 3 just below), when it = ye (more exactly, between ye and ya). *e* (Ъ, a variant symbol) = ye, except unstressed after a consonant, when it = e. *e* also often = yo (and o), in conditions too varied to state briefly; in this value many now write *ë* instead of *e*. И and *i* have the same value (И standing before consonants and *i* before vowels); they = ɪ (the initial light palatal y which marks the other "soft" vowels is not heard as a separate element). Ю (the symbol a tied ɪ and o) = iū, except in foreign words, where it = ū (Gen. Rem. 1).
3. The semivowel Й forms the second element of a number of diphthongs: aЙ, eЙ, ɪЙ, ЫЙ, oЙ, yЙ, ъЙ, which are simply the respective vowels followed by a light i, as ai, ei, etc. The semivowel Ь (= y) stands after consonants as a sign of "palatalization"; that is, the consonant is merged with y, and so is followed by a light y-glide (see Gen. Rem. 6). The symbol Ъ (formerly a consonantal u) is now silent, and serves only to indicate that the preceding consonant is not "soft" (palatalized) and is to be pronounced with energy.
4. *c* = s, З = z, Ц = ts, Ч = ch, Ш = sh, Щ = shch. Before н (n), Ч and Щ both = sh.
5. б (b), в (v), Д (d), З (z), Ж (ʒ), when followed by a voiceless consonant or by Ъ, are to be pronounced as p, f, t, s, sh, respectively.
6. Consonants before a "palatalized" vowel (see Note 2 above) become palatalized (cp. Polish, Note 9, and Gen. Rem. 6).
7. Г (g), when final, or before К (k), т (t), Ч (ch), is pronounced as н; before Д (d), it is a *voiced* н (Gen. Rem. 5). Initial in some foreign words, г = h; in the genitive endings *aro*, *ago*, *ero*, г = v. К (k) before every vowel and consonant = *k*.
8. Russian Л (l), when associated with "hard" vowels (Note 1 above), or with the velar consonants К (k), г (g), is made far back in the mouth (like the Polish ł; Polish, Note 8), the back of the tongue being raised, the tip lowered, and the lips a little rounded: it is almost a quick, light u. Otherwise, Russian l is palatalized — a lighter, clearer sound than English or German l.
9. The letter Ѳ (= f) appears in foreign words where th occurs.

9. Greek.

Classical.

In classical Greek, vowels were evenly stressed, the accent occasioning elevation of *pitch* in the musical scale instead of increase of force in the expiration. The musical pitch of the old Greek, however, can not be accurately known or reproduced. Greek should be read with attention to the *length* of the vowels.

1. Greek vowels have each a constant value. *η* is always sounded like ē in quality, but short in quantity; *ε* like e, but long. *ο* is approximately o, *ω* is ō, *υ* is ū, and *α*, *ι* are ā, ī respectively, whether long or short.
2. Diphthongs are pronounced simply by combining the sounds of their component vowels; as, *αι* = ai, *οι* = ɔi, *ωι* = ōi, *υι* = ūi (in the Language Chart represented by wI; see Gen. Rem. 9); *φ*, *χ*, and *ψ* are the same as *αι*, *ηι* (= ei), and *ωι*. *ει*, *ου* are not diphthongs, but = ē, ū. *αυ* = au, *ευ* = ēu, *ωυ* = ɔu.
3. The "rough breathing" ' = h; the "soft breathing" ' = *silent* h. *ῥ* (r with rough breathing) = strong *voiceless* r, like the Welsh *rh* (Welsh, Note 4).
4. *γ* before *γ*, *κ*, *χ*, *ξ*, = ŋ; hence *γγ* = ŋg.
5. *σ* (*ς*) = s; but before *β*, *γ*, and *μ*, *σ* = z.
6. *σσ* (*ττ*) = sh (approximately; but in reading classical Greek one generally sounds them as ss and tt).
7. *φ*, *θ*, *χ* (originally *π*, *τ*, *κ*, strongly aspirated) were in the classical period probably becoming spirants (that is, f, th, H respectively), but still aspirated (that is, accompanied by a distinct h); they are usually sounded, however, as simply f, th, H.

Modern.

Literary modern Greek differs appreciably in some details of pronunciation from the modern popular speech.

The modern Greek vowel system is much simplified, but the spellings remain archaic. The rules for syllable stress are similar to those for Latin.

1. *α*, *ᾳ*, whether long or short, have the quality of a; *ε*, *αι* = e; *η*, *ῃ*, *ι*, *υ*, *ει*, *οι*, *υι* — all = I (whether long or short); *ο*, *ω* = ō (long or short; but the sound is a shade toward ŏ, not the full ō heard in the English *laud*); *ου* = ū (but shortened).
2. *αυ*, *ευ*, *ηυ* = av, ev, Iv respectively; but the v being *bilabial* (Gen. Rem. 10), the effect is almost that of diphthongs ending in u — that is, au, eu, Iu. However, before voiceless consonants (*θ*, *κ*, *ξ*, *π*, *σ*, *τ*, *φ*, *χ*, *ψ*), the *υ* is pronounced as f; that is, one hears af, ef, If.
3. *β* = v; but it is a bilabial consonant (Gen. Rem. 10).
4. *γ* represents three sounds: (1) before *α*, *ο*, *ω*, and consonants, it is pronounced as a *voiced velar* spirant (like German *g* between vowels; see Gen. Rem. 5); (2) before *ε*, *η*, *ι*, *υ*, it is pronounced as y; (3) before *γ*, *κ*, *ξ*, *χ*, it is ŋ.
5. *κ* = k; but before front vowels (those sounded as i or e — Note 1 above) *κ* becomes a *palatal* consonant like English k in *key*, followed by a slight y-glide. After *ν* or *γ*, *κ* becomes g, and so *νκ*, *γκ* both = ŋg.
6. After *μ*, *π* becomes b; after *ν*, *τ* becomes d.
7. *χ* is sounded as H, a voiceless spirant, which is velar or palatal (Gen. Rem. 5) according as it is associated with back or front vowels.

10. Latin.

In the English pronunciation of Latin, the letters are given values such as they would have in like positions in English words to-day. The Roman pronunciation is an approximate restoration of the sounds as spoken by Romans of the classic period. The Continental pronunciation gives the letters mainly their modern continental values, and hence is but little removed from the restored historical (or Roman) pronunciation. When quoting Latin as Latin (especially when quoting literary passages), educated speakers now generally use the Roman method. But many Latin phrases have been so long fixed in the vocabularies of philosophy, law, medicine, etc., in the English values of the letters, that a public lecturer, a lawyer, or other professional man, quoting these familiar phrases, will usually pronounce them by the English method.

The accent in Latin words of two syllables rests upon the first syllable; in words of three or more syllables, upon the penult if that syllable contains a long vowel or a vowel followed by two consonants; otherwise, upon the antepenult.

English Method.

1. In open accented syllables, *a* = ē, *e* (*æ*, *œ*) = I, *i* = ai, *o* = ō, *u* = iū or ū (as in English). In closed accented syllables, *a* = a (except before *r* followed by another consonant, where *a* = ä), *e*, *i* (*y*) = i, *o* = ɔ, *u* = ŭ. *e* before *r*, and *i*, *u* before *r* followed by another consonant, = ŭ.
2. When final in unstressed syllables, *a* = ə, *e* = ɪ, *i* = o, and *u* = u or iu; but when final in monosyllables, vowels are treated as in open accented syllables (Note 1).
3. *c* and *g* as in English; that is, before *a*, *o*, *u*, *c* = k and *g* = g, and before *e* (*æ*, *œ*), *i* (*y*), *c* = s and *g* = j.
4. *s* = s or z (as in English); *si*, *ci*, *ti*, in terminations, are sounded as in English, and *xi* = ksh.
5. *x* initial = z; otherwise, *x* = ks.

Roman Method.

6. Diphthongs are sounded as the spelling indicates: *ae* = a + e (approximately ai); *ui* = ŭ + i (approximately wI; Gen. Rem. 9), etc. But in the period following the classical Latin, *ae* had come to be pronounced as long e.
7. *b* before *s* or *t* becomes voiceless (= p).
8. *o* in open accented syllables is long and = ō; in closed syllables, is short and = ɔ. In the case of the other vowels, the long and the short forms pair consistently, that is, they differ only in length, not in quality.
9. *n* before *c*, *g*, *q* = ŋ; hence *ng* = ŋg, not ŋ.
10. Latin *v* (Roman method) is bilabial (see Gen. Rem. 9), and = (almost) w.
11. *u* unstressed before another vowel = w.

11. Italian.

The accent is generally on the penult, and is less energetic than in English, all syllables being uttered more evenly. The lighter-stressed vowels are rarely reduced, as in English.

The letters *k*, *w*, *x*, *y* are not in the Italian alphabet, but appear in some words adopted from other languages.

1. Italian *e* represents sometimes ē, sometimes e or a (more strictly, a sound between e and a). The best guide to the value of the *e* is the Latin source of the vowel. No brief rule can be stated. One may say that *e* when unaccented, when in monosyllables, when final and accented (always marked with a grave accent), and generally when in an open stressed syllable, has a sound near ē.
2. The several Italian diphthongs are simply combinations of the sounds represented in their spellings.
3. *c*, and the *c* in *sc*, before *a*, *o*, *u*, and *ch* in all cases, = k; *g* before *a*, *o*, *u*, and *gh* in all cases, = g.
4. *c*, *cc*, before *e*, *i*, = ch; *sc* before *e*, *i* = sh; *g*, *gg*, before *e*, *i*, = j.
5. *h* is silent. It is infrequent except after *c* and *g*.
6. *gl* (before *i*) and *gn* represent respectively the "palatal" l and n (see Gen. Rem. 6).
7. *n* before *g* = ŋ; hence *ng* always = ŋg, never ŋ.
8. The value of *o* in Italian (as of *e;* Note 1 above) depends largely upon its Latin source, knowledge of which is an approximate guide. *o* when in unaccented syllables, and when in monosyllables ending in a consonant, = ŏ or o; but when final and accented, in monosyllables or otherwise, *o* = ō or ọ.
9. *s* when initial before a vowel, or when followed by a voiceless consonant, or when doubled (*ss*), = s; when between vowels (but not the initial of the second part of a compound word), or when before a voiced consonant, *s* = z (exceptions are numerous).
10. *u* as a vowel always = ū. It may be short, but still has the quality of ū, not of u. Unaccented *u* before a vowel is a consonant and = w.
11. Unaccented *i* before a vowel is a consonant and is sounded as a *palatal* H (see Gen. Rem. 5), but somewhat softer; it is, in fact, almost y. The letter *j* is simply a variant of *i* in this value.
12. *z*, *zz* when initial, or medial after a consonant, or before *i* followed by another vowel, = ts; when between two vowels, generally = dz.

12. French.

In French words no one syllable has a decided accent, but nearly all syllables are uttered with equal stress of voice. To an English ear a chief stress seems to fall on the final syllable; hence, in this dictionary, the primary accent (′) has been placed over the last syllable of most French words, and the secondary accent (″) on the other syllables (except over obscure *e*), to indicate a careful enunciation of all the unaccented syllables.

1. *a* represents sometimes ā, but generally a sound between a and a: (1) *a* = ā, in the endings *-as*, *-az* (when the *s* or *z* is pronounced, and often when *s* is silent), *-ase*, *-azon*, *-aille;* and when circumflexed *â;* (2) *a* (in most other cases), à, and á are pronounced with a sound near that of a, but not so "flat" as this English vowel. French *a* approaches the sound a especially before the final sounds b, d, g, l, m, n, ny (that is, the letters *b*, *d*, *g*, *l*, *m*, *n*, *gn* when these are pronounced), and before final *-re*, *-ge*. *oi* = wā when following *r*, and in the ending *-oie;* in most other cases *oi* = wa (with a not so "flat" as the English a).
2. (1) *e* before a pronounced consonant, before final silent *t*, *ts*, and final silent *s* in monosyllables; *ei*, *ai* (except the verbal ending *ai*); *è*, *ê; ay*, *ey* — all are pronounced as e (really a sound between e and ɛ). (2) *é; e* followed by a silent final consonant (other than *t*); *ai* (when it is a verbal ending) — all are pronounced as ē.
3. (1) *o* when it is the final sound in a syllable (that is, it may be followed by silent consonants), and *o* in the endings *-ose* (and generally before an *s* which has the value of z), *-me* and *-ne; ô*, *aô*, *au*, *eau* — all are pronounced as ō. (2) *o* not as above, and *au* before *r*, = o.
4. *eu*, *œu* not followed in the same syllable by a pronounced consonant, or in a closed syllable ending with the sound of *z* or *t* (*-euse*, *-eute*, *-eutre*), *eû* = "rounded" ē (Gen. Rem. 2); otherwise, *eu*, *œu*, and always *ue*, *œ* before *-il*, *-ille* (= y), = "rounded" e (Gen. Rem. 3).
5. For pronunciation of *u*, *û* = ū, see Gen. Rem. 1.
6. *e* when final in unstressed syllables = ə; at the end of a word it is usually silent (as in English).
7. Final *d*, *g*, *n*, *p*, *s*, *t*, *x*, and *z* are usually silent. But when the following word begins with a vowel, "liaison" may occur. These consonants (not in all cases; no rule can be given) are then pronounced as if beginning the following word, *d* being sounded as t, *g* as k, *s* and *x* as z. *r* is silent in the final syllables *-er* and *-ier*. *h* is in most words silent.
8. *c* before *a*, *o*, *u* = k; before *e*, *i*, *y* = s; *ç* = s. *ch* = sh; but when final or before a consonant = k. *q* and *qu* generally = k.
9. *g* before *a*, *o*, *u* = g; before *e*, *i* (*y*) = z; *ge* before *a*, *o*, *u* also = z.
10. *gn* = "palatal" n (see Gen. Rem. 6).
11. *il* after a vowel = y; *ill* = ly (cf. Gen. Rem. 6); also *i* before a vowel = y, unless a *group* of consonants precedes. By y is here meant the *initial* stage of the sound, not its consummation.
12. *m*, *n*, final or before a consonant, other than *m*, *n*, are silent, but impart to the preceding vowel a nasal quality. In such conditions, *am*, *an*, *em*, *en*, = aⁿ (but final *en* preceded by the sound y = aⁿ, not aⁿ); *aim*, *ain*, *eim*, *ein*, *im*, *in*, *ym*, *yn* = aⁿ; *om*, *on* = oⁿ; *oin* = waⁿ; and *um*, *un* = œⁿ (or əⁿ). (See Gen. Rem. 4.)
13. *s* between vowels = z.
14. *-ti-* = -si-, or -ty-; a rule can not be stated.
15. French has the letter *w* only in some foreign words; but the sound is heard in French words, spelled *ou* (as in *oui*); and it is, further, the first element in the sound represented by *oi* (= wa or *wa*), and by *oin* (= waⁿ). A similar sound is spelled with *u* (as in *nuit*, *nuage*); but the sound of *u* in these words is not exactly w; it differs from w in that it begins with the organs in position for ü, not for ū (see Gen. Rem. 10).
16. *x* between vowels generally = z. Otherwise, *x* = ks.

13. Spanish.

In general, Spanish words ending in a vowel or diphthong, or inflectional *-s*, *-n*, have the accent on the penult; with any other ending, on the final syllable. When the stress varies from this position, its place is often indicated by an acute accent-mark over the stressed vowel. Spanish vowels, whether stressed or unstressed, are enunciated fully and clearly.

1. *a*, *i* (*y*), *u*, whether long or short, have the sound of ā, ī, ū, respectively. *e* and *o*, when final in word or syllable, = ē and ō; when in a closed syllable, or before *ll*, *rr*, = e and o (or, more exactly, between o and ọ). An unstressed *u* before another vowel = w (as in Italian, Note 10).
2. Spanish diphthongs, both "rising" (having the stronger stress on the second vowel) and "falling" (with stronger stress on the first vowel), are numerous, but are to be pronounced simply as the letters representing them indicate; as, *ai* = aī, *ao* = au (almost), etc.
3. *b* = b; but between vowels it becomes a *bilabial* v (see Gen. Rem. 10). *v* has virtually the same sound as *b*, but a little softened, the contact between the lips being not so firm. *d* = d; but when final = (almost) th.
4. *ch* = ch. *c* before *e*, *i* = th (in Spanish America, s); otherwise, *c*, and *qu* always = k; *cc* = kth.
5. *g* before *e*, *i* = H (Gen. Rem. 5); otherwise, *g*, and always *gu* before *e*, *i* = g; between vowels, *g* often approaches a *voiced* H (Gen. Rem. 5).
6. *h* is silent; initial *hu* followed by another vowel = hw, as in *where*. *j* = a strong h (almost H).
7. *ll*, *ñ* represent the "palatal" l and n (Gen. Rem. 6). *n* before a k or g sound = ŋ.
8. *x* = ks; but before *p*, *t*, *c* often *x* = s.
9. *y* between vowels or initial before a vowel is a strong y (almost palatal H; Gen. Rem. 5). In other positions *y* is a vowel, being a variant of *i*, and = ī.
10. *z* = th (in Spanish America, s).

14. Portuguese.

The accent in Portuguese is much as in Spanish.

1. Portuguese has many diphthongs: the so-called "rising" which begin with half-consonantal i or u (light and fleeting), and the so-called "falling" which end with half-consonantal i or u. The diphthongs are pronounced just as they are spelled, except that ei = aī.
2. *b*, *d*, *g*, when between voiced sounds (that is, when preceded by a vowel and followed by a vowel or a voiced consonant), are somewhat altered from the normal b, d, g: *d* becomes almost th; *g* becomes the *voiced* H (see Gen. Rem. 5); and *b* becomes a *bilabial* v (that is, a v made between the two lips instead of between the lower lip and upper teeth; see Gen. Rem. 9).
3. *ê*, and *e* when it is stressed and long, or before final *r*, = ē. *é*, and *e* when stressed and short, or before *r* not final, or before *ss*, *ç*, or *c* (= s), = e (more exactly, a sound between e and a).
4. *g* before *a*, *o*, *u*, and *gu* before *e*, *i*, = g; *g* before *e*, *i*, = z; *gu* before *a* = gw. *qu*, and *c* before *a*, *o*, *u*, = k; *ç*, and *c* before *e*, *i*, = s. *ch*, *x* (generally) = sh.
5. *e* in unstressed syllables generally = ə; but unstressed *e* before a front consonant (that is, one made in the front of the mouth), and unstressed *i*, = ɪ.
6. *lh*, *l* (when final), and *nh*, are sounded as the "palatal" l and n (see Gen. Rem. 6).
7. *n* before the sounds k and g is pronounced ŋ, with the preceding vowel nasalized (Gen. Rem. 4); but the ŋ is very light — a mere glide from the nasal vowel to the following consonant.
8. Nasal vowels are numerous in Portuguese. They arise as in French; but the matter is simpler in Portuguese because the fundamental quality of the vowel is not changed, with the exception that *am* = nasal au (auⁿ). Otherwise, regularly; *an* = aⁿ, *em*, *en* = eⁿ, *im*, *in* = iⁿ, *aon* = auⁿ, etc. Sometimes nasal vowels in Portuguese are indicated by a tilde (as õ, ã).
9. *ou*, and sometimes *o*, = ō; *ô*, *o* (when short and in a closed syllable) = ọ; *o* when final, and generally when in an open syllable, = ū. When *o* stands before or after another stressed vowel, it forms with that vowel a diphthong, the *o* being sounded as a light u.
10. *s* initial and *ss* = s; *s* between vowels = z; *s* between a vowel and a following voiced consonant = z; *s* final or before a voiceless consonant = sh. *z* initial or between vowels = z; when final or before voiceless consonants = sh; when before a voiced consonant = ʒ.
11. *y* in Portuguese is a variant of *i*, and = ī.

15. Welsh.

Welsh words of more than one syllable are generally accented on the penult. Certain verbal endings, however, receive the stress; and a number of dissyllables with the prefixes *go-*, *ym-*, *ys-*, and substantives in *-awdr*, have the stress on the last syllable.

In the standard or approved spelling, every letter is sounded, and no letter (with few exceptions) has more than one sound.

1. *a*, *e*, *i*, *o*, *w*, *u*, *y*, when long, are sounded as ā, ē, ī, ō, ū, ūⁱ, ȳ, respectively; when short, they have approximately the same sounds, except that (1) short *a* = a, and (2) *y* in monosyllables, in final syllables, in the prefixes *cyd-* and (sometimes) *cym-*, and when preceded by the vowel *w* (= ū), has the sound of ū. *i* before another full vowel is consonantal and pronounced as y.
2. Welsh diphthongs are numerous, but offer no difficulty; they are pronounced as the component letters of the spelling indicate.
3. *ch* = H; *f* = v; *dd* = th; *th* = ṯh.
4. *ng* = ŋ; *ngh* = ŋh. These sounds, never initial in English, may begin words in Welsh.
5. *ll* is simply *voiceless* l (Gen. Rem. 7). Welsh *mh*, *nh*, *rh* are aspirated *m*, *n*, and *r;* they have much the effect of strong voiceless consonants.
6. *j*, *k*, *q*, *v*, *x*, *z* occur in foreign names; but many Welsh writers substitute the Welsh equivalents.

16. Hungarian.

Hungarian, the most important member of the Ural-Altaic group, is agglutinative in structure, words being built up by adding to a monosyllabic root successive formative suffixes. The vowels in these successive syllables are related to each other by the law of vowel harmony, or harmonic sequence. See HARMONIC SEQUENCE.

The accent in single words (simple or compound) rests upon the first syllable; in long words there is a secondary accent generally on the third syllable. But the lighter stressed syllables have scarcely less weight than the fully stressed, and consequently every vowel is pronounced full and clear.

Hungarian spelling is very consistent: the letters and combinations of letters (in striking contrast with English spelling) generally keep each its one phonetic value, with the exception of *e*, which sometimes = e, and sometimes (especially before *r*) is more open, approaching a. Consequently, the values of the letters once learned, any one can pronounce any printed word or spell any spoken word without difficulty. An acute accent over the various letters serves to distinguish the long (and *tense*) vowels, the letters for the corresponding short (and *lax*) vowels being unmarked. Counting the accented letters and the digraphs, the alphabet has 38 letters.

1. The letters *á*, *é*, *í*, *ó*, *ő*, *ú*, *ű* are sounded as ā, ē, ī, ō, ū ("rounded" ē — Gen. Rem. 2), ū, ū ("rounded" ī — Gen. Rem. 1), respectively — all long vowels. *a*, *e*, *i*, *o*, *ö*, *u*, *ü* = ɒ, e, i, o, ŭ (but short), ŭ (but short), ŭ, respectively — all short vowels. Diphthongs are represented by the letters of their constituent elements: *ai* = oi; *ei* = ei (nearly ai); áu = au.
2. Consonants are sounded as normally in English, except that *s* = sh and *j* = y. Consonant combinations as follows: *cs* = ch; *dzs* = j; *c*, *cz* = ts; *sz* = s; *zs* = ʒ.
3. Several "palatalized" consonants are heard in Hungarian (cp. Polish 9 and Gen. Rem. 6), indicated in the spelling by placing the letter *y* after the proper consonant letter, as *dy*, *ly*, *ny*, *ty*. (*y* serves no other purpose in Hungarian.) These sounds are the respective *d*, *l*, *n*, *t* sounds modified by raising the front part of the tongue as if for y at the time the consonant is pronounced; the position of the tongue gives a light y-glide after the consonants. The effect is to make *dy* sound somewhat like j, *ty* somewhat like ch. *gy* is pronounced as *dy*, somewhat like j. The Hungarian "palatal" l (spelled *ly*) has become in present pronunciation a simple y (as in French; see Gen. Rem. 6).
4. *n* before *k*, *g* = ŋ (hence *ng* always = ŋg, as in *finger*, never ŋ alone, as in *singer*).
5. A final consonant of one syllable is consistently assimilated to an initial consonant of the next syllable; that is, before a following voiceless consonant, all voiced consonants (except nasal and liquid consonants, m, n, l, r) are pronounced as the corresponding voiceless; and before a following voiced *stop* consonant, and *z*, *zs* (= z, ʒ), a voiceless consonant becomes voiced: before *p*, *t*, *k*, etc., *b* is pronounced as p, *d* as t, *g* as k, etc., and before *b*, *d*, *g*, etc., *p* is pronounced as b, *t* as d, *k* as g, etc.

17. Hebrew.

Hebrew is one of the Semitic languages, and has no close relations with the other languages represented in the chart. The others are all interrelated -- members of the Aryan or Indo-European family, supposed to be developed from a common mother tongue.

Hebrew is written from right to left. Its alphabet consists of 23 consonants, the vowel sounds being represented by small dots and dashes placed (with three exceptions) under the consonants after which they are to be pronounced. In the table a horizontal dash indicates the position of the consonant, the vowel signs (except ◌ֹ for o) appearing under it. In two other exceptional cases (an alternate sign for ō, and the sign for ū) the dot is associated with the silent symbol ׳; and the symbol for ē, ī may also have a silent י *after* the consonant that ē, ī is to follow.

Three letters (א, ו, י), originally vowels (a, i, u, respectively), are now mere vowel-strengtheners, or else virtual consonants, being respectively the "soft breathing" (Greek ᾽ = English *h* in *hour*), *y* (consonant form of i), and w (consonant form of u).

1. Hebrew vowels are long in open (simple), short in closed (compound) syllables. Their values are further effected by the accent. The vowel signs are as follows:

◌ָ	=	ā	◌ַ	=	a
◌ֵ or ◌ֶי	=	ē	◌ֶ	=	e (long or short)
◌ִי	=	ī	◌ִ	=	i
◌ֹ or ◌וֹ	=	ō	◌ָ	=	o
◌ֻ	=	ū	◌ֻ	=	u

The first vowel here (◌ָ) is not exactly ā, nor ō, but about Swedish å, a sound between ē and ō. The same sign stands for the short o. ◌ֶ is an *open* e, and may be long or short.

2. In unstressed syllables appear vowels that are much shortened and reduced or "obscured." One of these is either altogether silent, marking syllable division, or else an obscure vowel (ɪ); its symbol is ◌ְ. But, especially when associated with velar consonants, the reduced vowel is represented in a more definite value by adjoining this sign (◌ְ) to the actual vowel sign; as, ◌ָ◌ְ = reduced a; ◌ֵ◌ְ = reduced e; ◌ֹ◌ְ = reduced o.
3. Five consonants have a special form when final. These forms in the Language Chart are enclosed in parenthesis-marks.
4. א indicates not exactly the soft vowel beginning of the English (as in *hour*), but rather the energetic initial of the German vowel (as in *ein*). Three other characters represent consonant sounds more or less resembling h. These are: (1) ה, which is approximately h; but at the end of a word, unless furnished with a dot (cp. Note 6), it is silent. (2) ע usually = h; but at times it is much stronger, somewhat like an aspirated g, which may be transcribed as gh. (3) ח is usually a strong velar H (Gen. Rem. 5), but is sometimes weakened to an h.
5. ש and ס (both = s), originally differing in value, are now identical. צ (another s) differs from ש (ס), ט (t) from ת (t), and ק (k) from כ (k), in that the first consonant in each pair is emphatic — enunciated with stronger articulation, and with compression of the larynx.
6. The stopped consonants (p, b, t, d, k, g) and their corresponding spirants (f, v, ṯh, th, H, "voiced" H) are represented by the same signs, namely, פ, ב, ת, ד, כ, ג; but the stops are distinguished by a dot placed within the sign; thus, פ = p, ף = f, ת = d, ד = th, etc. In the case of all the other consonant letters, however, and also in the case of the six just mentioned *when they stand between vowels*, a dot thus placed is a sign merely of stronger enunciation (as if the consonant were doubled). Modern Jews pronounce ת as s.

A Standard Dictionary OF THE English Language.

A

A a *A a* 𝔄 𝔞 *A a* ɑ a a

Roman. Italic. Black Letter. Script. Revised Scientific.

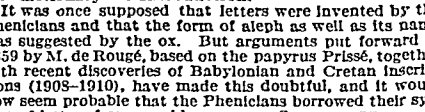
A[1], **a**, 1 ē; 2 ā, *n.* [AES, A's, or AS, 1 ēz; 2 āṣ, *pl.*] **1.** A letter: the first in the English alphabet, and in most other alphabets derived from Phenician. Its original sound in the Latin alphabet, from which ours comes directly, is that now heard long in *arm, calm*. The corresponding short sound hardly occurs in standard English of to-day except before *r* in unstressed syllables, *e.g.*, in *cartoon*. Out of this sound have developed, in modern English: (1) a 'higher' vowel (the words 'high' and 'low' have reference to the position of the back part of the tongue), heard short in *bat* and long in *air;* (2) a vowel higher than that of *arm*, but lower than that of *bat*, heard in *ask, bath;* (3) a very high long vowel, heard in *fate*, which gives the letter its name; (4) a low vowel heard long in *all* and short in *what;* (5) a so-called 'obscure' vowel, as in *sofa*, heard only in unstressed syllables. In the current spelling all these sounds are represented by the one letter a. In an alphabet aiming at accuracy it is necessary to distinguish them.

The name of the letter A is pronounced ē < Latin ū. In some alphabets the letters are named from catchwords beginning with them: 'A is an Anchor.' In Anglo-Saxon a was called 'ūc,' oak, while æ (æ) was named 'æsc,' ash. The Phenician letter was named 'aleph,' ox, whence Greek *alpha;* see ALPHABET.

For an account of the pronouncing alphabets used in this dictionary see Introduction.

It was once supposed that letters were invented by the Phenicians and that the form of aleph as well as its name was suggested by the ox. But arguments put forward in 1859 by M. de Rougé, based on the papyrus Prissé, together with recent discoveries of Babylonian and Cretan inscriptions (1908–1910), have made this doubtful, and it would now seem probable that the Phenicians borrowed their system of letters from an older source. See ALPHABET.

Pending the production of more authoritative information, our 'a' characters are traced to the Egyptian eagle as follows: English 'Roman' and 'Italic' types A, a, *a* (15 cent.) < It. types (15 cent.) < It. script (10–15 cent.). O. E. and Ger. text (15 cent.) < monkish cacography (14 cent.). Script a < AS. a (8 cent.) < O. Ir. 𝔄 (6 cent.) < Gallic-Italic a, 𝔞 (5 cent.) < Lat. Gr. 𝔄 (3 cent.) < Lat. (3 cent. B. C.) < Early Gr. A, 𝔄 (7 cent. B. C.) < Gr. right to left with hammer and chisel 𝔄 (7 cent. B. C.) < Phenician right to left 𐤀 (9 cent. B. C.) < Egyptian hieratic 𓄿 (25 cent. B. C.) < hieroglyph eagle 𓅱 (40 cent. B. C.).



Hieroglyphic Eagle. Egyptian Hieratic. Phenician. Early Greek. Roman. English Script.

2. An abbreviation: (1) *Med.* *A* or *āā* (= Gr. *ana*): used in prescriptions to direct that equal parts shall be taken. (2) *Com.* @ (= L. *ad*), at; to; as, 10 gross lead-pencils @ $1.73; eggs, 15 @ 20 cts. per doz. (3) *Law.* The badge of a convicted adulteress, among the New England Puritans, 1658–1785. ANDERSON *Law Dict.* (4) *Elec.* Ampere. (5) *Physics.* Absolute; as, *A.* temperature. (6) [Scot.] All. For other abbreviations see below. **3.** A symbol noting: (1) *Logic.* A universal affirmative proposition. (2) *Mus.* (*a*) One of a series of tones, at intervals of an octave, given, in modern international or French pitch, by 435 complete vibrations a second, or by 435 multiplied or divided by any power of 2: used as a standard tone for tuning instruments, as in an orchestra. See SCALE; PITCH. (*b*) The key having A for its key-note. (*c*) On a keyed instrument, any key giving A. See KEYBOARD. (*d*) In written music, any note representing A. See KEY; STAFF. (3) See DOMINICAL LETTER, under DOMINICAL. (4) The front side of a leaf, in some old books, where the leaves are numbered instead of the pages. (5) The first letter of the English alphabet impressed upon a type-body or type-bar; also, the perforations in a paper roll for machine-cast composition representing this symbol. (6) [A] Any person arbitrarily designated for argumentative purposes; as, *A* libeled B. (7) *Math.* A known quantity. (8) *Astron.* (*a*) [A] A band in the solar spectrum produced by the terrestrial atmosphere and due to oxygen: so named by Fraunhofer. See LINE[1], *n.*, 23. (*b*) [a] Mean distance. (9) [A] *Finance.* (*a*) Stock on which assent has been secured. See ASSENT, *v.* (*b*) Stock that ranks before other capital stock in the same class, as in receipt of dividends; as, *A* preferred has prior claim to B preferred. (*c*) [Cant, Eng.] Deferred common stock. See STOCK[1], *n.*, 5. (10) [A] In the Roman notation 50 or 500. With a dash over it (Ā) 5,000. (11) [A] A symbol, as on a motor-car, indicating a license issued at London. (12) [Hawaii.] Broken lava. See AA. (13) *Inter. Signal Code.* The letter denoted by a blue-and-white burgee.

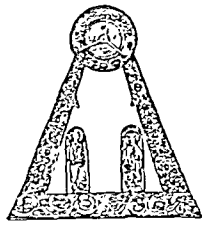
—**A 1,** 1 ē′wun′; 2 ā′wŭn′, *a.* **1.** Of the first or highest class: used of shipping to denote the condition of a vessel as to hull and equipment. 1½, 1¾, 2, 2½, and 3 are also used with *A*, and denote a descending scale of seaworthiness. **2.** Of the highest grade of credit: used in commercial and ship rating. **Aa†.** **3.** By extension, of the highest class of other things and in any respect; as, an *A1* musician; an *A number one* cook: read *A one* or *A number one.*— **A. of Charlemagne** (*Ch. Hist.*), the first of a series of 24 richly jeweled reliquaries modeled after the letters of the alphabet presented, it is said, by Charlemagne to various abbeys in France. It belongs to the church of Conques (Aveyron), France.— **A per se.** **1.** The letter *A* by itself, or as a word. **2.** A person or thing of preeminent excellence. **A per Cr†; A per se A†.**



"A" of Charlemagne.

A[2], 1 ā; 2 ā, *n.* The name of a Sumerian deity, given to the consort of Shamash, the Assyrian-Babylonian sun-god: usually with the determinative prefix *nin*, "lady," to denote the sex.

a, 1 ē; 2 ā (*unaccented*, 1 ə; 2 ə), *indef. article* or *a.* One; any; some; each: expressing singleness, unity, etc., more or less indefinitely. See ARTICLE. In Old English *a* was written *an*, a form still retained before vowel sounds. It is used: (1) before a noun expressing an individual object or idea; as, *a* bird; *a* hope; (2) before an abstract noun used concretely; as, "There's *a* wideness in God's mercy"; (3) before a collective noun; as, *a* multitude; *a* crowd; (4) before a proper noun used typically; as, we need *a* Washington; (5) after an attribute when preceded by *as, how, so, too,* and, in certain cases, after *many, such, what;* as, so great *a* statesman; what *a* victory! (6) before plural nouns with *few, great many,* or *good many;* as, *a* great many voters, *i. e.*, a large number of voters; (7) sometimes with *on, at,* or *of,* in a more definite sense, denoting oneness, sameness; as, birds of *a* feather; (8) in such phrases as one dollar *a* bushel, with the distributive sense of *each,* and equivalent to *per* or the Old English preposition *on;* as, "passing rich with forty pounds *a* year." GOLDSMITH *Deserted Village* l. 143. [< AS. *ān;* see AN, *indef. art.*]

A, *a.* Shaped like a capital A; as, an *A* tent, an *A* frame.

a[1], 1 ə; 2 a, *prep.* **1.** (1) To; into; as, set *a* going. (2) In the act of; as, he is *a* coming. (3) In; under process of; as, the house is *a* building. In the foregoing senses the *a* is now generally omitted and the noun treated as a participle. **2.** In; on; by: as, torn *a* pieces; he set out *a* Monday: confused with the article. See A, *indef. art.*, (8). **3.** In a state of; on; at; in; upon; toward: in composition only; as, ablaze, aback. [< AS. *an*, on.]

2. To give over entirely to another; resign; yield. **3.** To yield or devote (oneself) without restraint, as to the pursuit of pleasure. **4.** *Law.* See ABANDONMENT, 3. **5†.** To banish; reject. [< F. *abandonner*, < *à bandon*, in the power; *à*, < L. *ad*, to; *bandon*, < LL. *bandum*, *bannum*, < OHG. *ban*; see BAN¹, *n.*]— **a-ban'don-a-bl(e)**, *a.*— **a-ban'don-er**, *n.*

Syn.: abdicate, abjure, cast off, cease, cede, depart from, desert, discontinue, forego, forsake, forswear, give up, leave, quit, recant, relinquish, renounce, repudiate, resign, retire from, retract, surrender, vacate, withdraw from. *Abandon* is a word of wide signification, applying to persons or things of any kind; *abdicate* and *resign* apply to office, authority, or power; *cede* to territorial possessions; *surrender* especially to military force, and more generally to any demand, claim, passion, etc. *Quit* carries an idea of suddenness or abruptness not necessarily implied in *abandon*, and may not have the same suggestion of finality. The king *abdicates* his throne, *cedes* his territory, *deserts* his followers, *renounces* his religion, *relinquishes* his titles, *abandons* his designs. A cowardly officer *deserts* his ship; the helpless passengers *abandon* it. We *quit* business, *give up* property, *resign* office, *abandon* a habit or a trust. *Abandon* sometimes implies a previous close relationship or responsibility; a man *withdraws from* a crowd; he *abandons* his home, associates, or connection. A husband *abandons* or *deserts* his wife; a wife *deserts* her husband; either parent *abandons* a child. *Abandon* is applied to both good and evil action; a thief *abandons* his designs, a man his principles. *Relinquish* commonly implies reluctance; the fainting hand *relinquishes* its grasp; the creditor *relinquishes* his claim. *Abandon* implies previous association with responsibility for or control of; *forsake* implies previous association with inclination or attachment, real or assumed; a man may *abandon* or *forsake* house or friends; he *abandons* an enterprise; *forsakes* God. *Forsake*, like *abandon*, may be used either in the favorable or unfavorable sense; *desert* is always unfavorable, involving a breach of duty, except when used of mere localities; as, "The Deserted Village." While a monarch *abdicates*, a president or other elected or appointed officer *resigns*. It was held that James II. *abdicated* his throne by *deserting* it. See ABJURE; DISMISS.— Ant.: adopt, advocate, assert, cherish, claim, court, defend, favor, haunt, hold, keep, maintain.

a-ban′doned, } 1 ə-ban′dənd; 2 ą-băn′dond, *pa.* Given over (generally in a bad sense); unrestrained; hence, extremely profligate; shameless. See ABANDON, *v.*— **a-ban′doned-ly**, *adv.*

a-ban′donds, }

There are as mad, *abandon'd* critics too.
POPE *Essay on Criticism* pt. iii, l. 611.

Syn.: bad, corrupt, depraved, detestable, dissolute, forlorn, forsaken, incorrigible, irreclaimable, odious, profligate, reprobate, shameless, unprincipled, vicious, wicked. An *abandoned* person is one that has given himself up to evil without restraint. The *corrupt* and *vicious*, who still have some regard for the opinion of friends or of the public, are not yet *abandoned*. "Have you a single friend . . . so shameless, so thoroughly *abandoned*, as to undertake your defense?" JUNIUS *Letters* xxxiv, 150. [M.] The *dissolute* and *profligate* may repent; the *abandoned* have ceased to care; the *reprobate* have passed beyond hope. See ADDICTED.— Ant.: conscientious, correct, excellent, good, meritorious, moral, righteous, self-controlled, steady, upright, virtuous, worthy.

2. To level; as, to *abase* a mountain. **3.** [Rare.] To cast down; as, to *abase* the eye. **4.** To reduce in value, as coin: *debase* now preferred. [< F. *abaisser*, < LL. *abasso*, < *ad*, to, + *basso*, lower, < *bassus*, low; see BASE, *a.*]

Syn.: bring low, cast down, debase, degrade, depress, disgrace, humble, humiliate, lower, reduce, sink. *Abase* refers only to outward conditions. "Exalt him that is low, and *abase* him that is high." *Ezek.* xxi, 26. *Debase* applies to quality or character. The coinage is *debased* by excess of alloy, the man by vice. *Humble* in present use refers chiefly to feeling of heart; *humiliate* to outward conditions; even when one is said to *humble* himself, he either has or affects to have humility of heart. To *disgrace* may be to bring or inflict odium upon others or upon oneself; the noun *disgrace* retains more of the passive sense than the verb: he *disgraced* himself by his conduct; he brought *disgrace* upon his family. To *dishonor* a person is to deprive him of honor that should or might be given. To *discredit* one is to injure his reputation, as for veracity or solvency. A sense of unworthiness *humbles;* a shameful insult *humiliates;* imprisonment for crime *disgraces;* vile practises *lower*. *Degrade* may refer to either station or character. An officer is *degraded* by being *reduced* to the ranks. Drunkenness is a *degrading* vice. Misfortune or injustice may *abase* the good; nothing but their own ill-doing can *debase* or *disgrace* them.— Ant.: aggrandize, dignify, elevate, exalt, honor, promote, raise, uplift.— Prep.: to abase *by* misfortune; abase oneself *before* a superior.

Abashed, amid the lilies there. POE *Al Aaraaf* pt. i, st. 7.
They heard and were *abasht*. MILTON *P. L.* bk. i, l. 332.

II†. *i.* To stand confused or confounded; lose self-possession. [ME. *abaschen, abaissen*, < OF. *esbahir* (F. *ébahir*), astonish, < *es-* (< L. *ex*, out) + F. *bahir*, < *bah*, interj. of astonishment.]

Syn.: bewilder, confound, confuse, daunt, discompose, disconcert, dishearten, embarrass, humble, humiliate, mortify, overawe, shame. Any sense of inferiority *abashes*, with or without the sense of wrong. The poor are *abashed* at the splendor of wealth, the ignorant at the learning of the wise. To *confuse* is to bring into a state of mental bewilderment; to *confound* is to overwhelm the mental faculties; to *daunt* is to subject to a certain degree of fear. *Embarrass* is a strong word, signifying primarily hamper, hinder, impede. A pupil is *confused* by a perplexing question, a general *confounded* by overwhelming defeat. A hostess is *discomposed* by the tardiness of guests, a speaker *disconcerted* by a failure of memory. The criminal who is not *abashed* at detection may be *daunted* by the officer's weapon. Sudden joy may *bewilder*, but will not *abash*. The true worshiper is *humbled* rather than *abashed* before God. The parent is *mortified* by the child's rudeness, the child *abashed* at the parent's reproof. The *embarrassed* speaker finds it difficult to proceed. The mob is *overawed* by the military, the hypocrite *shamed* by exposure. "A man whom no denial, no scorn could *abash*." FIELDING *Amelia* bk. iii, ch. 9, p. 300. [B. & S. 1871.] To *mortify* a person is to bring upon him a painful sense of humiliation, whether because of his own or another's fault or failure. See EMBARRASS.— Ant.: animate, buoy, cheer, embolden, encourage, inspirit, rally, uphold.— Prep.: abashed *at* discovery; abashed *before* the king; abashed *in* the presence of superior goodness or wisdom.

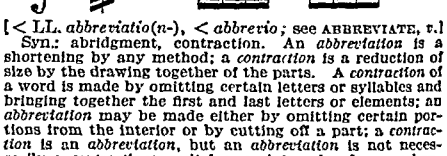
Syn.: see BRIEF.

ab-bre"vi-a'tion, 1 a-brī'vi-ē'shən; 2 ă-brē'vi-ā'shon, *n.* **1.** The act of abbreviating, or the state of being abbreviated. **2.** An abbreviated form, as *pl.* for plural. **3.** A brief summary; abridgment. **4.** *Mus.* A method of indicating repetition of a note, chord, or arpeggio, or a series of the same, as in the following forms:



[< LL. *abbreviatio(n-),* < *abbrevio;* see ABBREVIATE, *v.*]

Syn.: abridgment, contraction. An *abbreviation* is a shortening by any method; a *contraction* is a reduction of size by the drawing together of the parts. A *contraction* of a word is made by omitting certain letters or syllables and bringing together the first and last letters or elements; an *abbreviation* may be made either by omitting certain portions from the interior or by cutting off a part; a *contraction* is an *abbreviation,* but an *abbreviation* is not necessarily a *contraction; rec't* for receipt, *mdse.* for merchandise, and *Dr.* for debtor are *contractions;* they are also *abbreviations; Am.* for American is an *abbreviation,* but not a *contraction. Abbreviation* and *contraction* are used of words and phrases, *abridgment* of books, paragraphs, sentences, etc. See ABRIDGMENT.

A List of Abbreviations.

The following list contains the principal abbreviations and contractions used among English-speaking peoples. Others will be found in vocabulary place. Self-evident abbreviations are not included. [< L. *aberratus*, pp. of *aberro*, < *ab*, from, + *erro*, wander.] — **ab'er-ra"tor**, *n.*

ab"er-ra'tion, 1 ab"ə-rē'shən; 2 ăb"e-rā'shon, *n.* **1.** Deviation from a right, customary, or prescribed course, or from a natural condition; a wandering away.

Originality is never to be sought for its own sake, otherwise it will be mere *aberration*.

RUSKIN *Modern Painters* vol. i, p. 17, note. [S. E. & CO. 1851.]

2. *Med.* (1) Partial insanity. (2) The passage of a fluid in an abnormal direction, or to or through a wrong part. **3.** *Biol.* Deviation from the type; abnormal formation. **4.** *Optics.* The failure of a lens or mirror to bring all light-rays to the same focus. When due to the form of the lens or mirror it is called **spherical aberration**; when arising from the different refrangibility of light of different colors, as of the rays of the spectrum, it is called **chromatic aberration.** **5.** *Astron.* An apparent displacement of a heavenly body, due to the relative motion of the earth and the body combined with the progressive motion of the light from the body. Aberration is **diurnal** when due to the rotation of the earth on its axis, **annual** when due to the motion of the earth in its orbit, **planetary** when due to the relative motion of the body during the time taken by its light to reach the earth. **6.** *Law.* The wounding of another person than the one intended, as by a missile.

Syn.: alienation, delirium, delusion, dementia, derangement, deviation, divergence, eccentricity, hallucination, illusion, insanity, lunacy, madness, mania, unsoundness, wandering. a-bet', 1 ə-bet'; 2 a-bĕt', *vt.* [A-BET'TED; A-BET'TING.] **1.** To encourage by act or counsel; instigate; uphold; countenance; as, to *abet* evil-doing or an evil-doer.

Several publicans . . . were pointed out as having aided or *abetted* the plot. IRVING *Washington* vol. ii, p. 228. [P. H. & H. 1864.]

2. *Law.* To aid, promote, or encourage the commission of (an offense); as, Saul *abetted* the stoning of Stephen.

From the original signification 'to bite,' *abet* took the meaning 'to bait, to chase with dogs, set dogs on.' From this comes the sense of 'instigate,' frequently with an accompanying idea of deceit, as shown in the practise of luring or catching by means of bait. [ME. *abetten*, < OF. *abeter*, < *a* (< L. *ad*), to, + *beter*, bait, < Ice. *beita*, cause to bite, < *bita*, bite.]

Syn.: advocate, aid, assist, countenance, embolden, encourage, incite, instigate, promote, sanction, support, uphold. *Abet* is now used generally in a bad sense. A clergyman will *advocate* the claims of justice, *aid* the poor, *encourage* the despondent, *support* the weak, *uphold* the constituted authorities; but he will not *incite* to a quarrel, *instigate* a riot, or *abet* a crime. The originator of a crime often *instigates* or *incites* others to *abet* him in it, or one may *instigate* or *incite* others to a crime in which he himself takes no active part. See AID.— Ant.: baffle, confound, counteract, denounce, deter, disapprove, disconcert, discourage, dissuade, expose, frustrate, hinder, impede, obstruct.

a-bet'ment, 1 ə-bet'mənt *or* -mənt; 2 a-bĕt'ment, *n.* The act of abetting; aid; instigation; countenance. **a-bet'†; a-bet'tal†.— a-bet'ter, a-bet'tor**, *n.* One who abets.

The *abettors* of slavery are weaving the thread in the loom, but God is adjusting the pattern.

ab-hor', 1 ab-hōr'; 2 ăb-hôr', *v.* [AB-HORRED', AB-HORD'ST; AB-HOR'RING.] **I.** *t.* **1.** To view with extreme repugnance; detest or hate extremely; loathe; abominate; as, "the lie that flatters I *abhor* the most," COWPER *Table Talk* l. 88. **2.** [Archaic.] To horrify. **3.** [Archaic.] To repudiate.

II. *i.* **1.** [Rare.] To be at variance. **2†.** To shrink with horror. [< L. *abhorreo*, < *ab*, from, + *horreo*, shrink.]

Syn.: abominate, despise, detest, dislike, hate, loathe, nauseate, scorn, shun. *Abhor* is stronger than *despise*, implying a shuddering moral recoil. "How many *shun* evil as inconvenient who do not *abhor* it as hateful." TRENCH *Serm. in Westm. Abbey* xxvi, 297. [M.] *Detest* expresses indignation, with something of contempt. *Loathe* implies disgust, physical or moral. We *abhor* a traitor, *despise* a coward, *detest* a liar. We *dislike* an uncivil person. We *abhor* cruelty, *hate* tyranny. We *loathe* a reptile or a flatterer. We *abhor* Milton's heroic Satan, but we can not *despise* him.— Ant.: admire, approve, covet, crave, desire, enjoy, esteem, like, love, relish.

ab-hor'rence, 1 ab-hor'ens; 2 ăb-hŏr'ĕnç, *n.* **1.** The act of abhorring; a feeling of utter repugnance; loathing. **2.** That which arouses detestation. **3.** A statement that one abhors something; especially, such a statement made by the Abhorrers. See ABHORRER, 2. **ab-hor'ment†; ab-hor'ren-cy†.**

Syn.: antipathy, aversion, condemnation, contempt, detestation, disgust, dislike, hatred, loathing, repugnance, revulsion. See ABOMINATION.— Ant.: admiration, affection, appreciation, approval, attachment, delight, enjoyment, esteem, pleasure, ratification, regard, satisfaction. — Prep.: abhorrence *of* treason.

EMERSON *Essays, Over-Soul* p. 235. [R. & CO.]

[< F. *abolir* (*abolissant*), < L. *aboleo*, < *ab*, away. + *oleo*, grow.]

Syn.: abate, abrogate, annihilate, annul, destroy, end, eradicate, exterminate, extirpate, nullify, obliterate, overthrow, prohibit, remove, repeal, reverse, revoke, set aside, stamp out, subvert, supplant, suppress, terminate. *Abolish*, to bring absolutely to an end, especially as something hostile, hindering, or harmful, was formerly used of persons and material objects, but this usage is now obsolete except in poetry or highly figurative speech. *Abolish* is now used of institutions, customs, and conditions, especially those wide-spread and long existing; as, to *abolish* slavery, ignorance, intemperance, poverty. A building that is burned to the ground is said to be *destroyed* by fire. *Annihilate*, as a philosophical term, signifies to put absolutely out of existence. As far as our knowledge goes, matter is never *annihilated*, but only changes its form. Some believe that the wicked will be *annihilated*. *Abolish* is not said of laws. There we use *repeal*, *abrogate*, *nullify*, etc.: *repeal* by the enacting body, *nullify* by revolutionary proceedings; a later statute *abrogates*, without formally *repealing*, any earlier law with which it conflicts. An appellate court may *reverse* or *set aside* the decision of an inferior court. *Overthrow* may be used in either a good or a bad sense; *suppress* is commonly in a good, *subvert* always in a bad, sense; as, to *subvert* our liberties; to *suppress* a rebellion. The law *prohibits* what may never have existed; it *abolishes* an existing evil. We *abate* a nuisance, *terminate* a controversy. See also CANCEL; DEMOLISH; EXTERMINATE.— Ant.: authorize, cherish, confirm, continue, enact, establish, institute, introduce, legalize, promote, reinstate, renew, repair, restore, revive, set up, support, sustain.

Aboma. 1/10

The rain was pitiless, and the road *abominable*.
TYNDALL *Glaciers* pt. 1, § 27, p. 218. [J. M. 1860.]

This word, formerly spelled *abhominable*, owes its meaning to a mistaken derivation from the Latin *ab homine*, away from or contrary to man. The error antedates the use of the word in English. [OF., < L. *abominabilis*, < *abominor*; see ABOMINATE, *v.*] Syn.: abhorrent, accursed, detestable, execrable, foul, hateful, horrible, nauseous, odious, offensive, repulsive, vile, wicked. See BAD; CRIMINAL.— Ant.: admirable, beautiful, charming, delectable, delightful, enjoyable, excellent, grateful, lovely, sweet, worthy.

a-bom"i-na'tion, 1 ə-bem'i-nē'shən; 2 a-bŏm'i-nā'shon, *n.* 1. Anything that excites disgust and hatred or loathing; a very detestable act or practise; anything vile or shamefully wicked; as, "the *abominations* of the heathen," *2 Kings* xxi, 2. 2. Any unpleasant factor object.

Brewed up flaxseed and lime juice and quinine and willow stems into an *abomination* which was dignified as beer.
KANE *Arctic Explorations* vol. ii, ch. 5, p. 59. [C. & P. 1856.]

3. Extreme disgust and hatred; loathing or aversion. See note under ABOMINABLE. **a-bom"i-na'clount.**

Syn.: abhorrence, annoyance, aversion, crime, curse, detestation, disgust, evil, execration, hatred, horror, iniquity, nuisance, offense, plague, shame, villainy, wickedness. *Abomination* (from the L. *ab omen*, a thing of ill omen) was originally applied to anything held in religious or ceremonial *aversion*; as, "that which is highly esteemed among men is *abomination* in the sight of God." *Luke* xvi, 15. In common use it signifies something very much disliked or loathed, or that deserves to be. Choice food may be an object of *aversion* and *disgust* to a sick person; vile food would be an *abomination*. A toad is to many an object of *disgust*; a foul sewer is an *abomination*. As applied to crimes, *abomination* is used of such as are especially brutal, shameful, or revolting; theft is an *offense*; infanticide is an *abomination*.— Ant.: affection, appreciation, approval, benefit, blessing, delight, desire, enjoyment, esteem, gratification, joy, satisfaction, treat.

— **abomination of desolation** (*Bib.*), a desecration of sacred precincts, as by the placing of the image of a heathen god in the temple (*Dan.* ix, 27; xi, 31, etc.): sometimes identified with some historic character, event, or thing.

II. *n.* Anything that is used to cause abortion.

a-bort'†, **a-bort'ment†**, *n.* Abortion.

a-bor'tion, 1 ə-bōr'shən; 2 a-bôr'shon, *n.* 1. The act of bringing forth young prematurely; in a loose use, miscarriage. In the human subject, as usually construed in law and medicine, abortion is the expulsion of the product of conception at any period of gestation before the fetus becomes viable. In a stricter sense it is "the expulsion of the ovum before the third month of gestation, as distinguished from miscarriage" (F. *Med. Dict.*). The period is variously limited by other authorities. The word *abortion* is also sometimes loosely used to mean criminal abortion.

2. The fruit of the act of aborting; hence, any misshapen or defective thing. 3. *Biol.* The partial or complete arrest of development of an organ. 4. Failure in anything during progress and before maturity, as in an enterprise or project. [< L. *abortio*(*n*-), < *aborior*; see ABORT.]

OWEN MEREDITH *Lucile* pt. ii, can. 2, st. 4.

Specif.: (1) Unrestrained by laws, constitution, or popular will, as in government and control; despotic; supreme; as, an *absolute* ruler. (2) Unrestrained by reason or principle, as in conduct and action; arbitrary; as, an *absolute* autocrat. (3) Free from mental limitation; unrestricted by ignorance or doubt; infallible; perfectly certain. (4) Free from liability to change, as in purpose; not merely tentative; fixed; irrevocable; as, an *absolute* decree. **2.** Free from dependence upon anything else for existence or certainty.

Such a thing as an *absolute* right of property never has existed.
R. T. ELY *Intro. to Polit. Econ.* pt. iv, ch. 1, p. 214. [CHAUT. 1889.]

Specif.: (1) Independent in existence; self-existent; as, God is the *absolute* Being. (2) Not logically dependent; immediately known; underived; ultimate; as, intuitive truth is *absolute*. (3) Unqualified; unconditional; unreserved; as, an *absolute* denial.

Some of these promises are conditional, others are as *absolute* as anything can be expressed.
BUTLER *Analogy* pt. ii, ch. 7, p. 264. [c. & BROS.]

Not *absolute* liars, but such careless handlers of truth that its sharp corners get terribly rounded.
HOLMES *Autocrat* ch. 5, p. 131. [p. s. & co. 1859.]

3. Free from or independent of relations; unrelated; unconditioned; as, *absolute* knowledge is opposed to relative. Specif.: (1) *Philos.* (*a*) Free from any necessary relation to anything else. (*b*) Free from all possible relations, whether necessary or voluntary; quantitatively infinite; including all things, God and the universe.

That which is conceived as *absolute* and infinite must be conceived as containing within itself the sum not only of all actual, but of all possible modes of being. H. L. MANSEL *Limits of Rel. Thought* lect. ii, p. 76. [c. & L. 1859.]

(*c*) Not conditioned; unconditionally limited. SIR WILLIAM HAMILTON *Dissertations*. (2) *Gram.* Free from the usual relations of syntax or construction; as, the ablative *absolute*. Complete in itself; positive; permanently perfect; not altered by time and place; as, moral law is *absolute*. **3.** Without exception or abatement; entire; total; as, "total abstinence and *absolute* prohibition." J. T. PECK *Hist. Gt. Repub.* p. 404. **4.** *Law.* Free from all external interference or defect in rights or title; unrestricted; unquestionable. **5†.** Freed or absolved from. CHAUCER *Boethius* 175. [< OF. *absolut*, < L. *absolutus*, pp. of *absolvo*; see ABSOLVE.]

Syn.: arbitrary, authoritative, autocratic, despotic, irresponsible, supreme, tyrannical, unconditional, unequivocal. *Absolute*, in the strict sense, free from all limitation or control, and *supreme*, superior to all, can not properly be said of any being except the divine. Both words are used, however, in a modified sense, of human authorities; as, an *absolute* monarch, the *supreme* court. In this connection *absolute* has sometimes an unfavorable meaning. *Autocratic* power knows no limits outside the ruler's self; *arbitrary* power, none outside the ruler's will or judgment. *Despotic* is commonly applied to a masterful or severe use of power, which is expressed more decidedly by *tyrannical*. *Arbitrary* may be used in a good sense; as, the pronunciation of proper names is *arbitrary;* but the bad sense is the prevailing one; as, an *arbitrary* proceeding. *Irresponsible* power is not necessarily bad, but eminently dangerous; an executor or trustee should not be *irresponsible;* an *irresponsible* ruler is likely to be *tyrannical*. *Authoritative* is used always in a good sense, implying the right to claim authority; as, an *authoritative* definition or decision. A perfect ruler might be *irresponsible* and not *tyrannical*. See DOGMATIC; IMPERIOUS; INFINITE; MERE; PERFECT; PURE.—Ant.: accountable, conditional, conditioned, constitutional, contingent, dubious, imperfect, incomplete, limited, relative.

Absolute is used with many nouns, as **absolute constant** (see under CONSTANT, *n.*). Terms of this kind not defined below are given under the second element.

—**ablative absolute,** see under ABLATIVE.—**a. alcohol,** see under ALCOHOL.—**a. ego,** the conscious principle of identity to which all the attributes and actions of the subject are referred; the pure ego, non-individual, neither subject nor object. Fichte identified it with the *Absolute* in the pantheistic sense given under the noun.—**a. force of a powder** [U. S.] (*Gunnery*), the pressure resulting from the explosion of a powder in a closed space which it occupies completely. See EXPLOSIVE, *n.*—**a. forest land or soil** (*Forestry*), land fit only for forest growth.—**a. form,** the perfect form. Specif.: (1) *Platonic Philos.* That form of the supreme Idea of which all other Ideas are attributes. (2) In German idealism, the relation of the subject to the object, regarded as the perfect form.—**a. form-factor** (*Forestry*), see FORM-FACTOR, under FORM, *n.*—**a. magnitude,** absolute value.—**a. ownership,** in law, an unqualified title to property and the unquestioned right to immediate and unconditional possession thereof.—**a. pressure,** pressure reckoned from vacuum, as distinguished from that counted above that of the atmosphere.—**a. space** (*Physics*), space regarded without consideration of material limitations or things.—**a. strength** (*Engin.*), that quality in material by virtue of which it withstands force or strain without yielding or breaking.—**a. subject,** same as ABSOLUTE EGO. —**a. temperature** (*Physics*), temperature reckoned from the absolute zero.—**a. value** (*Math.*), the value expressed by a number without its sign.—**a. weight** (*Agric.*), the weight of a given number of seeds from which the average weight of each seed is computed.—**a. zero,** that point of temperature at which a body would be wholly deprived of heat, and at which a perfect gas would exert no pressure: supposed to be about —274° C., —461° Fahr., or —219° Réaumur: used only on the thermodynamic scale.

ab'so-lute, *n.* **1.** [A-] *Philos. & Theol.* The unlimited and perfect Being, God: usually with the definite article, *the* Absolute. The Absolute, as free from all necessary relations, is the First Cause, or God, of theism; as freed from all possible relations, it is the Absolute of pantheism. With Herbert Spencer, *the Absolute* is that which transcends all finiteness or determination, and so becomes the equivalent of the "Unknowable." In the peculiar use of Sir Wm. Hamilton, it is the unconditionally limited as opposed to the unconditionally unlimited or infinite. In the philosophical systems of Schelling and Hegel, it is a disputed question whether their conception of ultimate reality as absolute corresponds to the self-determined being of Plato or, rather, to the relationless and negative being of

5. In (one's possession) or on (one's person); as, I haven't a dollar *about* me. **a-bout'ŧ**; **a-bout'ent**; **a-bouts'ŧ**.— **to set about,** to begin.— **a-bout'ward†**, *adv.* With strife or tendency toward something; hence, at the point; about.

2. A condensed form, as of a book or play; a smaller or partial reproduction; an epitome or abstract.

Ingratitude is the *abridgment* of all baseness.

FULLER *Church Hist.* vi, 327. [M.]

An *abridgment* is the condensation of the views of one author, and implies preserving the substance, the essence, of the work, in language suited to such purpose.

4 MCLEAN *U. S. C. C. Reports* pp. 306–310.

3. *Law.* One of a class of books in which the substance of the reports of decisions, or the rules of law deduced therefrom, are concisely and systematically stated; as, Bacon's *Abridgement.* See ABRIDGE. **4†.** Anything which abridges, causing time to pass quickly, as a theatrical performance. [< OF. *abrigement,* < *abregier;* see ABRIDGE.] **a-bridge'ment†.**

Syn.: abbreviation, abstract, analysis, compend, compendium, digest, epitome, outline, summary, synopsis. An *abridgment* gives the most important portions of a work substantially as they stand. An *outline* or *synopsis* is a form of sketch closely following the plan. An *abstract* or *digest* is an independent statement of what the book contains. An *analysis* draws out the chief thoughts or arguments, whether expressed or implied. A *summary* is the most condensed statement of results or conclusions. An *epitome, compend,* or *compendium* is a condensed view of a subject, whether derived from a previous publication or not. We may have an *abridgment* of a dictionary, but not an *analysis, abstract, digest,* or *summary.* We may have an *epitome* of religion, a *compendium* of English literature, but not an *abridgment.* See ABBREVIATION.— Ant.: amplification, expansion, expatiation, exposition, paraphrase.

a-brim', 1 ə-brim'; 2 a-brim', *adv.* Filled to the top.

Women are always turning from the *abstract* to the individual and feeling where the philosopher only thinks.
HARRIET B. STOWE *Minister's Wooing* ch. 2, p. 25. [D. & J. 1859.]

4. *Logic.* Any product of the mental act of abstracting; an abstract idea or term. 5. *Gram.* (1) A noun expressive of qualities or a general attribute; as, virtue, vice, deformity. (2) Especially, since the 13th century, such a noun formed from an adjective, as *goodness* from *good*, etc. 6. *Pharm.* A powder obtained by digesting a drug with some suitable solvent, such as sugar of milk, and so made that one part (of the abstract) represents two parts of the basic substance. An abstract is twice as strong as a fluid extract and ten times as strong as a tincture. SYN.: see ABRIDGMENT.—**abstract of title** (*Law*), a document containing a brief and orderly statement of the original grant and subsequent conveyances and encumbrances relating to the title and ownership of real estate.—**a. received and forwarded** (*Railroad.*), a report of freight received and dispatched from a station.—**in the a.**, conceived apart from concrete relations or embodiment; in its general reference or meaning; abstractly.

She has no idea of poverty but *in the abstract*.
IRVING *Sketch-book, The Wife* p. 32. [L. 1883.]

ab-stract'ed, 1 ab-strakt'ed; 2 ăb-străct'ĕd, *pa.* **1.** Absent-minded. 2. Separated from everything else; apart; hence, abstruse; difficult. 3†. Refined; ideal.

SYN.: absent, absent-minded, absorbed, heedless, inattentive, indifferent, listless, negligent, oblivious, preoccupied, thoughtless. As regards mental action, *absorbed*, *abstracted*, and *preoccupied* refer to the cause, *absent* or *absent-minded* to the effect. The man *absorbed* in one thing will appear *absent* in others. A *preoccupied* person may seem *listless* and *thoughtless*, but the really *listless* and *thoughtless* have not mental energy to be *preoccupied*. The *absent-minded* man is *oblivious* of ordinary matters simply through inattention or because his thoughts are elsewhere. One who is *preoccupied* is intensely busy in thought; one who is *absorbed* or *abstracted* may be merely in a reverie or day-dream. Compare synonyms for ABSTRACT, *v.*— ANT.: alert, attentive, on hand, prompt, ready, thoughtful, wide-awake.—**-ly,** *adv.*—**-ness,** *n.*

ab-strac'tion, 1 ab-strak'shŏn; 2 ăb-străc'shon, *n.* **1.** The act, process, or product of abstracting, or withdrawing the attention from other qualities or aspects of an object, in order to concentrate it upon some one quality or aspect. Specif.: (1) The mental operation of separating qualities or attributes from the individual objects to which they belong, or of contemplating them as thus separated; as, the *abstraction* of whiteness from white objects. Abstraction is the groundwork of classification, which is impossible without it.

The act of analytic attention by which that element in each of these objects which is like its fellow in every other way, is separately observed or noticed, is usually called *abstraction*, because the mind draws it from the other parts or percepts.
PORTER *Human Intellect* pt. iii, ch. 2, p. 389. [S. 1890.]

(2) The condition of mind which results in its being withdrawn from certain objects, or parts or attributes of objects, and its being fixed upon some other objects, parts, or attributes.

Abstraction . . . is merely a negation to one or more objects, in consequence of its concentration on another.
HAMILTON *Metaphysics* lect. xxxiv, p. 469. [C. & L. 1859.]

The precise nature of the mental activity or mental state called abstraction has been much debated. Many of the older writers on logic defined it as the the qualities or attributes of the objects could somehow be withdrawn from the objects themselves, when considered as a number of individuals having something in common, and so be compounded into a general notion of quality or attribute. It is now commonly recognized, however, that the act of abstraction consists in the withdrawal of attention. Such abstraction is necessary to the formation of those mental schemata, or conceptions, for which words become the vehicle, as it were.

(3) In a wide sense, the formation of a conception. THOMSON *Laws of Thought* pt. i, pp. 95, 96. [SH. & CO. 1863.] 2. A product of the mental process of abstracting; a concept or notion; as, beauty is an *abstraction*.

Abstractions, under the glowing genius of the orator, acquired . . . a power to thrill the blood.
WEBSTER *Works, Memoir* vol. i, ch. 6, p. 96. [L. B. & CO. 1858.]

3. A conception existing only in the mind and answering to no reality; something visionary.

The general advantage is an *abstraction* which concerns only an *abstraction* called humanity.
W. S. LILLY *Right and Wrong* ch. 2, p. 50. [C. & H. 1891.]

4. The act or process of separating, taking, or removing, especially secretly or dishonestly; purloining. 5. Absence of mind; obliviousness of immediate surroundings, as from attention concentrated on something else. 6. Separation from worldly objects, pursuits, and enjoyments; seclusion of life, as by the hermit. 7. *Geol.* The draining of water from a stream by another having more rapid corrading action. 8†. *Chem.* Separation of a constituent from a compound or mixture by distillation.—**Platonic abstraction,** the mystical self-forgetfulness which leads the philosopher into a region of thought and spirit absolutely above his present condition. R. A. VAUGHAN *Hours with the Mystics* 4th ed., vol. i, p. 19.—**ab-strac'tion-al,** *a.*—**ab-strac'tion-ist,** *n.* One given to abstractions; an idealizer.—**ab"strac-ti'tious†,** *a. Chem.* Produced by distillation.

SYN.: anomalous, chimerical, erroneous, false, foolish, ill-advised, ill-considered, ill-judged, inconclusive, incorrect, infatuated, irrational, mistaken, monstrous, nonsensical, paradoxical, preposterous, ridiculous, senseless, silly, stupid, unreasonable, wild. That is *absurd* which is contrary to the first principles of reasoning; as, that a part should be greater than the whole is *absurd*. A *paradoxical* statement appears at first thought contradictory or *absurd*, while it may be really true. Anything is *irrational* when clearly contrary to sound reason, *foolish* when contrary to practical good sense, *silly* when petty and contemptible in its folly, *erroneous* when containing error that vitiates the result, *unreasonable* when there seems a perverse bias or an intent to go wrong. *Monstrous* and *preposterous* refer to what is overwhelmingly *absurd*; as, "O *monstrous!* eleven buckram men grown out of two," SHAKESPEARE *1 King Henry IV.* act ii, sc. 4. The *ridiculous* or the *nonsensical* is worthy only to be laughed at. The lunatic's claim to be a king is *ridiculous;* the Mother Goose rimes are *nonsensical*. See IDIOTIC; INCONGRUOUS; INSANE; RIDICULOUS.— ANT.: certain, consistent, demonstrable, demonstrated, established, incontestable, incontrovertible, indisputable, indubitable, infallible, logical, rational, reasonable, sagacious, sensible, sound, substantial, true, undeniable, unquestionable, wise.—**ab-surd',** *n.* [Rare.] An absurdity; a person or thing that is absurd.—**-ly,** *adv.*—**-ness,** *n.*

a-bun'dant, 1 ə-bun'dənt; 2 a-bŭn'dant, *a.* Affording a large measure or an overplus; fully sufficient; plentiful; abounding; as, *abundant* reason; *abundant* fruitfulness.

The grace of our Lord was exceeding *abundant*. *1 Tim.* i, 14.

[OF., < L. *abundan*(*t-*)*s*, ppr. of *abundo;* see ABOUND.]

SYN.: abounding, affluent, ample, bountiful, brimming, copious, full, generous, large, lavish, liberal, luxuriant, overflowing, plenteous, plentiful, profuse, rich, teeming. That is *abundant* which makes sure of sufficiency by evident overplus. *Affluent*, *lavish*, *luxuriant*, and *profuse* imply a decided excess, *lavish* and *profuse* oftenest in the ill sense. We rejoice in *abundant* resources, and honor *generous* hospitality; *lavish* and *profuse* expenditure suggests extravagance and wastefulness. See AFFLUENCE; AMPLE; ENOUGH; LARGE.— ANT.: deficient, drained, dry, exhausted, impoverished, inadequate, insufficient, niggardly, poor, scant, scarce, scrimped, short, sparing, straitened.— PREP.: abundant *in* resources.—**abundant number,** a number the sum of whose aliquot parts exceeds the number itself; as, 18, the sum of whose aliquot *parts*, 1, 2, 3, 6, 9, is 21: *distinguished from* a *deficient number*, the sum of whose aliquot parts is less than itself, and a *perfect number*, in which their sum equals the number.—**a-bun'dant-ly,** *adv.*

a-buze', 1. To use improperly or excessively; put to a bad use; misuse.

I believe it is in the power of every man, who has not too long *abused* himself, to lay aside every night his pack of mental care and anxiety. HOLLAND *Lessons in Life* lesson xx, p. 284. [S. 1867.]

2. To treat ill; wrong; use injuriously; hurt. 3. To wrong in speech; reproach coarsely; disparage; revile.

Yes, if a man's character is to be *abused*, say what you will, there's nobody like a relation to do the business.
THACKERAY *Vanity Fair* ch. 19, p. 175. [D. & CO.]

4. *Law.* To violate; ravish. 5. To disuse. 6. To mistake. 7†. To deceive; cheat. [< F. *abuser*, < L. *abusus*, pp. of *abutor*, < *ab*, from, + *utor*, use.]

SYN.: aggrieve, damage, defame, defile, disparage, harm, ill-treat, ill-use, impose on or upon, injure, malign, maltreat, misemploy, misuse, molest, oppress, persecute, pervert, prostitute, rail at, ravish, reproach, revile, ruin, slander, victimize, vilify, violate, vituperate, wrong. *Abuse* covers all unreasonable or improper use or treatment by word or act. A tenant does not *abuse* rented property by "reasonable wear," tho that may *damage* the property and *injure* its sale; he may *abuse* it by needless defacement or neglect. It is possible to *abuse* a man without *harming* him, as when the criminal *vituperates* the judge; or to *harm* a man without *abusing* him, as when the witness tells the truth about the criminal. *Defame*, *malign*, *rail at*, *revile*, *slander*, *vilify*, and *vituperate* are used always in a bad sense. One may be justly *reproached*. To *impose on* or to *victimize* one is to *injure* him by *abusing* his confidence. To *persecute* one is to *ill-treat* him for opinion's sake, commonly for religious belief; to *oppress* is generally for political or pecuniary motives. "Thou shalt not *oppress* an hired servant that is poor and needy." *Deut.* xxiv, 14. *Misemploy*, *misuse*, and *pervert* are commonly applied to objects rather than to persons. A dissolute youth *misemploys* his time, *misuses* his money and opportunities, *harms* his associates, *perverts* his talents, *wrongs* his parents, *ruins* himself, *abuses* the gifts of God.— ANT.: applaud, benefit, care for, cherish, conserve, consider, eulogize, extol, favor, laud, panegyrize, praise, protect, regard, respect, shield, sustain, tend, uphold, vindicate.

—**a-bus'a-bl(e²,** *a.*—**a-bus'ed-ly,** *adv.*—**a-bu-see',** *n.* One who is abused.—**a-buse'ment†,** *n.* Abuse; misuse.—**a-bus'er,** *n.* **1.** One who abuses. 2. *Law.* Insult; abuse.

a-buse', 1 ə-biūs'; 2 a-būs', *n.* **1.** Improper use, application, or treatment; a turning to a wrong purpose or use; excessive, imprudent, or unnatural use; unduly severe or cruel treatment; perversion; misuse; misapplication; as, *abuse* of confidence; *abuse* of one's body or its powers; to subject a child to *abuse*.

Abuse of the Queen's English . . . did not begin with Americans.
MATHEWS *Words* ch. 3, p. 104. [S. C. C. 1876.]

2. A corrupt, immoral, or improper practise, usage, or act; as, we must remedy these *abuses*. 3. *Law.* (1) Any improper use of a right or privilege; as, *abuse* of a franchise. (2) Wrongful use of lawful authority; as, *abuse* of a judicial process or legal writ. 4. Reviling or abusive language; vituperation; slander. 5. Violation; rape. [< F. *abus*, < L. *abusus;* see ABUSE, *v.*] **a-bu'sion†.**

SYN.: see OUTRAGE.

Ac"a-de'mus, 1 ak'ə-di'mus; 2 ăc'a-dē'mŭs, *n. Gr. Myth.* An Attic hero who revealed to Castor and Pollux, on their invasion of Attica, the whereabouts of their sister Helen, who was concealed by Theseus at Aphidnæ.

a-cad'e-my, 1 ə-kad'ı-mı; 2 a-căd'e-my, *n.* [-MIES, 1 -mız; 2 -mis, *pl.*] **1.** A place of instruction or training. Specif.: (1) A school intermediate between a common school and a college. (2) Any institution where the higher branches of learning are taught, or where pupils are trained in some special science or art; as, the U. S. Naval *Academy*. **2.** [A-] *Gr. Antiq.* (1) The public pleasure-ground, including a gymnasium, near Athens, where Plato taught philosophy; hence, the pupils of Plato collectively. (2) The Platonic movement with its successive schools, including the doctrines taught.
The Academy of Plato became divided into several schools, of which Cicero recognizes two, altho some authorities distinguished as many as five in the period between Plato and Cicero. Of these the chief were the **Old Academy** and the **New Academy.** The former consisted of Plato and his more immediate disciples and successors. In the 2d and 3d centuries B. C. arose the **Middle Academy,** so-called, the teaching of which was skeptical, altho, unlike dogmatic skepticism, it considered possible the attainment of probable knowledge. The **New Academy** (1st century B. C. to A. D. 529) returned to the Platonic interest in ethical doctrines and ideals, and practised a broad eclecticism in philosophy.
3. An association of literary men, artists, scientists, or the like, combined for the promotion of literature, art, or science; as, the *Academy* of Fine Arts; the French *Academy*. See INSTITUTE. [< F. *académie*, < L. *academia*, < Gr. *akadēmeia*, < *Akadēmos*, a reputed hero.]

a-camp'si-a, 1 ə-kamp'sı-ə; 2 a-cămp'si-a, *n. Med.* Permanent rigidity and gradual wasting of a limb. [< Gr. *akampsia*, < *a-* priv. + *kamptō*, bend.] **a-camp'sy‡.**

a'ca-na, 1 ä'ka-na; 2 ä'cä-nä, *n.* [W. Ind.] A sapotaceous tree (*Labourdonnatia albescens*) yielding excellent timber.

ac"a-na'ceous, 1 ak'ə-nē'shus; 2 ăc'a-nā'shŭs, *a. Bot.* Prickly. [< L. *acanos*, < Gr. *akanos*, thistle, < *akē*, point.]

Ac"a-nel'li-dæ, 1 ak'ə-nel'ı-di; 2 ăc'a-nĕl'i-dē, *n. pl. Zooph.* A family of gorgonacean polyps generally united with the *Istidæ*. **Ac"a-nel'la,** *n.* (t. g.)

a-ca-non'i-cal†, *a.* Uncanonical.

a-canth', 1 ə-kanth'; 2 a-cănth', *n.* **1.** See ACANTHUS. **2.** *Zool.* A squaloid shark, the piked dogfish (*Squalus acanthias*).

a-can'tha, 1 ə-kan'thə; 2 a-căn'tha, *n.* [-THÆ, 1 -thi; 2 -thē, *pl.*] **1.** *Bot.* A prickle, spine, or thorn. **2.** *Zool.* (1) The spinal column. (2) A spinous process of a vertebra. (3) A prickly fin or spine. [< Gr. *akantha*, thorn, < *akē*, point.]
—**Ac"an-tha'ce-æ,** *n. pl. Bot.* A family of trees, herbs and shrubs — the acanthus family belonging to the order *Polemoniales*—having opposite, simple leaves and bracted flowers.—**ac"an-tha'ceous,** *a.* **1.** Armed with

prickles. 2. Of or pertaining to the *Acanthaceæ*.— **a-can'thad**, *n.* A plant of the acanthus family.— **Ac"an-thar'chus**, *n. Ich.* A genus of percoid fishes of the family *Centrarchidæ*, including the dusky mud-sunfish or mud-bass (*A. pomotis*).— **Ac"an-tha'ri-a**, *n. pl. Protoz.* A legion or order of radiolarians having a simple membrane bounding the minutely perforated central capsule, which has a skeleton of spicules radiating from a central point within and is destitute of phæodium around it.— **ac"an-tha'ri-an**, *a. & n.*— **Ac"an-thas"ter-i'næ**, *n. pl. Echin.* A subfamily of echinasteroid starfishes. **Ac"an-thas'ter**, *n.* (t. g.)— **A-can"the-phyr'i-dæ**, *n. pl. Crust.* A family of deep-sea monocarpidean *Macrura* with a compressed body and carinated back. **Ac"an-theph'y-ra**, *n* (t. g.) — **ac"an-theph'y-rid**, *n.*— **ac"an-theph'y-roid**, *a.*— **A-can"ther-pes'tes**, *n.* A genus of fossil myriapods of the Carboniferous era, measuring about one foot in length, having branching spines and possibly also lateral branchial pores.— **ac"an-thich"thy-o'sis**, *n. Pathol.* Ichthyosis.— **Ac"an-thi'i-dæ**, *n. pl. Entom.* A family of bugs. **A-can'thi-a**, *n.* (t. g.) **A-can'thi-dæ‡.**— **a-can'thin**, *n. Protoz.* A horny substance constituting the skeleton or spicules, as in certain radiolarians.— **ac-an-thin'ic, a-can'thi-nous**, *a.*

a-can'thine, 1 ə-kan'thin; 2 a-căn'thin, *a.* **1.** Of, pertaining to, or like an acanthus; decorated with the acanthus-leaf. 2. Like or having spines. [< L. *acanthinus*, < Gr. *akanthinos*, thorny, < *akantha*; see ACANTHA.]

a-can'thi-on, 1 ə-kan'thi-ən; 2 a-căn'thi-ŏn, *n.* A craniometrical point. See CRANIOMETRY. [< Gr. *akanthion*, dim. of *akantha*, spine.]

A-can"thi-sit'ti-dæ, 1 ə-kan'thi-sit'i-dī; 2 a-căn'thi-sit'i-dē, *n. pl. Ornith.* The *Xenicidæ*.

Ac"an-this'ti-us, 1 ak'an-this'ti-us; 2 ăc'ăn-this'ti-ŭs, *n. Ich.* A genus of fishes of the family *Serranidæ*, frequenting South-American and other waters, and related to *Plectropoma*.

a-can'thite, 1 ə-kan'thait; 2 a-căn'thīt, *n. Mineral.* An iron-black silver sulfid (Ag_2S), crystallizing in the orthorhombic system.

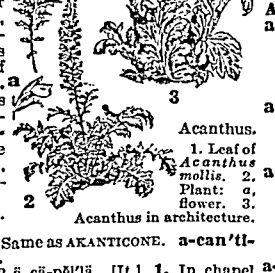
a-can'tho-, 1 ə-kan'tho-; 2 a-căn'tho-. From Greek *akantha*, a spine, point, prickle, thorn: a combining form. — **Ac"an-thob'a-tis**, *n.* A fossil genus of raioid fishes, found in the Miocene Tertiary of France and Wurttemberg. [C.]— **A-can"thob-del'li-dæ**, *n. pl. Helminth.* A family of leeches with a bundle of hooks on each side of the pointed snout. **A-can"thob-del'la**, *n.* (t. g.)— **a-can"thob-del'lid**, *n.*— **a-can"thob-del'loid**, *a.*— **ac"an-thob'o-lus**, *n. Med.* A forceps to extract splinters from the flesh. **ac"an-thab'o-lus‡; a-can'tho-bole‡.**— **A-can"thobran"chi-a'ta**, *n. pl. Conch.* The *Anthobranchiata*. — **a-can"tho-car'pous**, *a.* Having prickles or spines on the fruit.— **A-can"tho-ceph'a-la**, *n. pl. Helminth.* An order of nematelminth worms without a mouth or intestinal canal, but with a retractile proboscis covered with hooks, comprising *Echinorhynchidæ*. They are parasitic, and become sexually mature in a vertebrate which has swallowed an invertebrate containing the immature form. **A-can"tho-ceph'a-lit‡.**— **a-can"tho-ceph'a-lan**, *a. & n.* — **A-can"tho-ceph"a-li'na**, *n. pl. Entom.* A division of coreoid insects with a blade-like process on the forehead and thick coarsely toothed femora: including large dark-brown bugs of the Gulf States. **A-can"tho-ceph'a-lus**, *n.* (t. g.)— **a-can"tho-ceph'a-lous**, *a.* Spiny-headed; of or pertaining to the *Acanthocephala*.— **A-can"tho-cer-at'i-dæ**, *n. pl.* A family of ammonites in the Cretaceous series, having more or less transversely ribbed shells, discoidal or in loose whorls. **Ac"an-thoc'er-as**, *n.* (t. g.)— **a-can"tho-chæ'to-don**, *n. Ich.* A genus of chætodontoid fishes; the East-Indian butterfly-fishes.— **A-can"tho-chi-as'mi-dæ**, *n. pl. Protoz.* A family of radiolarians with opposite spines grown together in the center, in pairs.— **a-can"tho-chi-as'mid**, *n.*— **a-can"tho-chi-as'moid**, *a.*— **A-can"tho-clad'i-dæ**, *n. pl. Helminth.* A family of Paleozoic polyzoans, with a branching polyzoary, poriferous on one side only. **A-can"tho-cla'di-a**, *n.* (t. g.)— **ac"an-thoc'la-did**, *n.*— **ac"an-thoc'la-doid**, *a.*— **ac"an-thoc'la-dous**, *a. Bot.* Having thorny branches.— **A-can"tho-clin'i-dæ**, *n. pl. Ich.* A Pacific family of blennioid fishes with many spines in the dorsal and anal fins. **Ac"an-thoc'li-nus**, *n.* (t. g.)— **ac"an-thoc'li-nid**, *n.*— **ac"an-thoc'li-noid**, *a. & n.*— **A-can"tho-cyc'li-dæ**, *n. pl. Crust.* A family of cancroidean crabs with a suborbicular or narrow carapace and obsolete external antennæ. **A-can"tho-cy'clus**, *n.* (t. g.)— **a-can"tho-cy'clid**, *n.*— **a-can"tho-cy'cloid**, *a.*— **a-can'tho-cyst**, *n. Helminth.* A large cell or vesicle of the proboscis of nemertean worms, which contains one or several calcareous stylets.— **Ac"an-tho'de-a, Ac"an-tho'di-i**, *n. pl.* Same as ACANTHODOIDEA. — **Ac"an-thod'i-dæ**, *n. pl. Ich.* A family of *Acanthodoidea* with a compressed body and spines in front of all the fins except the caudal. **Ac"an-tho'des**, *n.* (t. g.) **Ac"an-tho'de-i‡.**— **ac"an-tho'de-an**, *a.*— **ac"an-tho'di-an**, *a. & n.*— **a-can'tho-did**, *n.*— **a-can'tho-doid**, *a. & n.*— **A-can"tho-dol'de-a**, *n. pl. Ich.* An order of fossil (Devonian and Carboniferous) fishes, intermediate between the sharks and true fishes, with spines to the paired fins, a cartilaginous skeleton, no opercula, heterocercal tail, and placoid scales. **A-can"tho-di'nit.**— **a-can"tho-dol'de-an**, *a. & n.*— **A-can"tho-dor'i-di'næ**, *n. pl. Conch.* A subfamily of polyceroid sea-slugs without dorsal appendages. **A-can"tho-do'ris**, *n.* (t. g.)— **a-can"tho-do'ri-dine**, *a. & n.*— **A-can"tho-dril'i-dæ**, *n. pl. Helminth.* A family of plectonephric earthworms with eight setæ and two pairs of prostates to a somite. **Ac"an-thod'ri-lus**, *n.* (t. g.)— **ac"an-thod'ri-lid**, *n.*— **ac"an-thod'ri-loid**, *a.*— **A-can"tho-ga-nol'de-i**, *n. pl. Zoöph.* A family of antipatharian corals with cells on all sides of the branches and with elongate setaceous spines in the margin. **A-can"tho-gor'gi-a**, *n.* (t. g.) **A-can"tho-gor-gi'a-dæ‡.**— **a-can"tho-gor'gi-id**, *n.*— **a-can"tho-gor'gi-oid**, *a.*— **a-can'thoid**, *a.* Spiny.— **Ac"an-thol'i-mon**, *n.* A genus of plants of the leadwort family (*Plumbaginaceæ*), bearing rose-colored flowers.— **ac"an-thol'o-gy**, *n. Biol.* The science or study of the nature and function of spines.— **a-can"tho-log'i-cal**, *a.* Of or pertaining to spines, or derived from studying them. — **A-can"tho-lon'chi-dæ**, *n. pl. Protoz.* A family of acantharian radiolarians with 20 unequal radial spines, the two equatorial spines largest. **A-can"tho-lon'cha**, *n.* (t. g.) **A-can"tho-lon'chi-da‡.**— **a-can"tho-lon'chid**, *n.*— **a-can"tho-lon'choid**, *a.*— **ac"an-thol'y-sis**, *n.* A wasting disease of the prickle-cells.— **ac"an-tho'ma**, *n.* A morbid overgrowth of the prickle-cell layer of the epidermis.— **A-can"tho-mer'i-dæ**, *n. pl. Entom.* A family of large American dipterous insects, of which there are three genera — *Acanthomera*, *Pantophthalmus*, and *Rhaphiorhynchus* — resembling the gadflies.— **A-can"tho-met'ræ**, *n. pl. Protoz.* **1.** An order of acantharian radiolarians without complete latticed shell. 2. The *Acantharia* as a whole. **A-can"tho-met're-a‡.**— **a-can"tho-met'ran**, *a. & n.*— **a-can"tho-met're-an**, *a. & n.*— **a-can"tho-met'rous**, *a.*— **A-can"tho-met'ri-da**, *n. pl. Protoz.* **1.** The order *Acanthometræ*. 2. The family *Acanthometridæ*.— **a-can"tho-met'ri-dan**, *a. & n.*— **A-can"tho-met'ri-dæ**, *n. pl. Protoz.* A family of acanthometrous radiolarians variously limited. **A-can"tho-met'ra**, *n.* (t. g.) — **a-can"tho-met'rid**, *n.*— **a-can"tho-met'roid**, *a.*— **Ac"an-thon'i-dæ**, *n. pl. Protoz.* A suborder of acanthometrous radiolarians with 20 spines regularly disposed.— **a-can'tho-nid**, *n.*— **ac"an-thon'i-dan**, *a.*— **Ac"an-thoph'i-dæ**, *n. pl. Herp.* A family of colubriform serpents with the nostrils in the rostral plates and a bony spine terminating the tail, including the Australian death-adder. **A-can'tho-phis**, *n.* (t. g.) — **a-can'tho-phid**, *n.*— **a-can'tho-phoid**, *a.*— **ac"an-thoph'o-rous**, *a.* Bearing spines. **ac"an-thoph'er-ous‡.**— **A-can"tho-phrac'tæ**, *n. pl. Protoz.* A suborder or order of acanthonian radiolarians with complete latticed shell. **A-can"tho-phrac'ta‡; A-can"tho-phrac'ti-da‡.**— **a-can"tho-phract**, *a. & n.*— **a-can"tho-phrac'tan**, *a. & n.*— **a-can"tho-phrac'tous**, *a.*— **a-can'tho-pod**. *Zool.* **I.** *a.* Having spines on the feet. **a-can"tho-po'di-ous‡; ac"an-thop'o-dous‡.** **II.** *n.* An insect, as a beetle, with spiny feet.— **a-can"tho-po'di-ous**, *a. Bot.* Having spines on the stalk of the leaf or pedicel of the flower. — **a-can"tho-po'ma-tous**, *a.* Having a thorny or serrated operculum.— **a-can'tho-pore**, *n.* A tubiform spine, as in certain fossil polyzoans.— **a-can'tho-pous**, *a. Zool.* Having the eye furnished with spinous processes. F. *Med. Dict.*— **Ac"an-thop'ter-i**, *n. pl. Ich.* An order or suborder of teleost fishes comprising acanthopterygians with separate lower pharyngeal bones.— **ac"an-thop'-tere**, *n.*— **ac"an-thop'ter-an**, *a. & n.*— **ac"an-thop'-ter-ous**, *a.* **1.** Having spines on the wings, as the cassowary and jacana. 2. Having spines in the fins; of, pertaining to, or having the characteristics of the *Acanthopteri* or *Acanthopterygii*.— **A-can"thop-ter-yg'i-i**, *n. pl. Ich.* An order or suborder of teleosts, variously limited, containing all or most fishes with spines in the fins, as the mackerel, bass, etc. **A-can"thop-ter-yg'i-at.**— **a-can"thop-ter-yg'i-an**, *a. & n.*— **a-can"thop-ter-yg'i-ous**, *a.*— **ac"an-tho'sis**, *n.* Disease of the prickle-cell layer of the epidermis. F. *Med. Dict.*— **a-can"tho-sphe'note**, *a. Echin.* Descriptive of the spines of sea-urchins, which, in cross-section, show cuneiform parts alternating with strips of porous tissues and radiating from a median axis.— **a-can'tho-sphere**, *n. Bot.* A spicule occurring in the cells of characeous plants, as the *Nitella*.— **A-can"tho-stau'ri-dæ**, *n. pl. Protoz.* The *Quadrilonchidæ*.— **A-can"tho-stig'ma**, *n. Bot.* A genus of *Fungi Imperfecti*, chiefly saprophytic, with small bristly perithecia on the surface, and hyaline, spindle-shaped septate spores. *A. parasiticum*, a European species, is said to attack the silver fir (*Abies picea*).— **A-can"tho-tel-son'i-dæ**, *n. pl. Crust.* A Carboniferous family of malacostracans representing the suborder *Syncaridea*. **A-can"-tho-tel'son**, *n.* (t. g.)— **a-can"tho-tel'son-id**, *n.*— **a-can"tho-tel'son-oid**, *a.*— **A-can"tho-the'ca**, *n. pl. Arach.* The *Linguatulina* or *Pentastomidea*.

a-can'thous, 1 ə-kan'thus; 2 a-căn'thŭs, *a.* Spinous.

a-can'tho-zo'oid, 1 a-kan'tho-zō'oid; 2 ă-căn'tho-zō'ŏid, *n. Helminth.* In some cestoid worms, as *Dipylidium cantnum*, the narrowed posterior part of the embryo upon which hooks are produced.

Ac"an-thu'ri-dæ, 1 ak'ən-thiū'ri-dī; 2 ăc'an-thū'ri-dē, *n. pl. Ich.* The *Teuthididæ*. **Ac"an-thu'rus**, *n.* (t. g.) [< Gr. *akantha*, spine, + *oura*, tail.]— **ac"an-thu'rid**, *n.*— **ac"an-thu'roid**, *a. & n.*

a-can'thus, 1 ə-kan'thus; 2 a-căn'thŭs, *n.* **1.** *Bot.* (1) [A-] A genus of perennial herbs of the acanthus family (*Acanthaceæ*), of some of the warmer regions of the Old World, having large and handsome dentate or spinous leaves. (2) Any plant of the genus *Acanthus*. 2. *Arch.* A more or less conventionalized representation of an acanthus-leaf: characteristic of the Corinthian capital. [L., < Gr. *akanthos*, < *akantha*; see ACANTHA.]



Acanthus. 1. Leaf of *Acanthus mollis*. 2. Plant: *a*, flower. 3. Acanthus in architecture.

ac-cel'er-ant, 1 ak-sel'ər-ənt; 2 ăc-çĕl'er-ant. **I.** *a.* Accelerating; hastening. **II.** *n.* That which accelerates or quickens, as a nerve which quickens the rate of pulsation of the heart. [< L. *acceleran(t-)s,* ppr. of *accelero,* ACCELERATE.]

ac-cel'er-ate, 1 ak-sel'ər-ēt; 2 ăc-çĕl'er-āt, *v.* [-AT'ED; -AT'ING.] **I.** *t.* **1.** To cause to act or move more quickly. (1) To hasten the motion or increase the speed of, especially continuous velocity: opposed to *retard;* as, to *accelerate* the speed of a cone-pulley.

It [Encke's comet] is *accelerated* by being . . . allowed to drop nearer to the sun. YOUNG *Astron.* § 710, p. 402. [c. & co. 1889.]

(2) To hasten the natural or usual course of; as, to *accelerate* combustion. **2.** To antedate; place before its time in history: said of forged dates of events.

II. *i.* To move faster. [< L. *acceleratus,* pp. of *accelero,* < *ad,* to, + *celer,* quick.] **—accelerating gun,** a cannon having along its bore chambers of explosives successively fired to contribute to the momentum of the projectile.

SYN.: advance, dispatch, drive, drive on, expedite, facilitate, further, hasten, hurry, make haste, press forward, promote, quicken, speed, urge, urge on. To *accelerate* any work is to *hasten* it toward a finish, commonly by *quickening* all its operations in orderly unity toward the result. To *dispatch* is to do and be done with, to get a thing off one's hands. To *dispatch* an enemy is to kill him outright and quickly; to *dispatch* a messenger is to send him in haste; to *dispatch* a business is to bring it quickly to an end. *Dispatch* is commonly used of single items. To *promote* a cause is in any way to bring it forward, *advance* it in power, prominence, etc. To *speed* is really to secure swiftness; to *hasten* is to attempt it, whether successfully or unsuccessfully. *Hurry* always indicates something of confusion. The *hurried* man forgets dignity, appearance, comfort, courtesy, everything but speed; he may forget something vital to the matter in hand; yet, because reckless haste may attain the great object of speed, *hurry* has come to be the colloquial and popular word for acting quickly. To *facilitate* is to *quicken* by making easy; to *expedite* is to *quicken* by removing hindrances. A good general will improve roads to *facilitate* the movements of troops, *hasten* supplies and perfect discipline to *promote* the general efficiency of the force, *dispatch* details of business, *expedite* all preparations, in order to *accelerate* the advance and victory of his army.— ANT.: check, clog, delay, drag, hinder, impede, obstruct, retard.

ac-cel'er-at"ed-ly, *adv.* With increased velocity.

ac-cel"er-a'tion, 1 ak-sel'ər-ē'shən; 2 ac-çĕl'er-ā'shon, *n.* **1.** The act of accelerating, or the process of being accelerated; a quickening, as of progress, action, functional activity, etc. **2.** *Physics.* The rate at which the velocity of a body increases per unit of time: used also of decrease of velocity, which is expressed as a negative acceleration.

Acceleration is **uniform** when the increment of velocity is equal in successive equal intervals of time; **retarded,** when the velocity is diminished; **angular,** when the velocity in turning about a center is changed.

At London, the force with which the earth attracts a pound of matter is capable of imparting to the pound an *acceleration* of 32.1912 in feet and seconds.

ac-cent', 1 ak-sent'; 2 ăc-çĕnt', *vt.* **1.** To pronounce with an accent. **2.** To mark with a written or printed accent. **3.** To render emphatic; make prominent; emphasize.

ac'cent, 1 ak'sent; 2 ăc'çĕnt, *n.* **1.** A stress of voice on a particular syllable in pronouncing a word.

Besides the chief or primary *accent,* when the word is long, for the sake of harmony or distinctness, we often give a secondary or less forcible *accent* to another syllable; as, . . . to the second of in-dem"ni-fi-ca'tion. GOULD BROWN *Gram. of Eng. Gram.* pt. iv, ch. 2, p. 810. [w. w. 1880.]

2. A modulation of the voice; mode of utterance; pronunciation; as, he spoke English with a French *accent.*

Yet he pleased the ear
And with persuasive *accent* thus began.
MILTON *P. L.* bk. ii, l. 118.

At the door of Evangeline's tent she sat and repeated
Slowly, with soft, low voice, and the charm of her Indian *accent.*
LONGFELLOW *Evangeline* pt. ii, iv, st. 3.

3. (1) A significant word or tone; in the plural, speech; words in general.

One *accent* of the Holy Ghost—
The heedless world hath never lost. EMERSON *The Problem* st. 4.

(2) A distinguishing mark or quality, as the peculiar excellence characteristic of the work of certain painters. **4.** *Pros.* The regular recurrence of a stress falling on certain syllables, the succession of such syllables determining the rhythm. **5.** A mark used in written or printed language to indicate the position and nature of the stress or the quality of vowel sounds.

The common accents are the *acute* (´), *grave* (`), and *circumflex* (~, ¯, or ^). The acute is in general use; grave and circumflex, to distinguish different inflections of the voice, are occasionally used in English, as in works on elocution.

6. *Mus.* (1) Stress of voice or instrument, usually coinciding with an accented beat, but sometimes at variance with it. See BEAT; MEASURE; SYNCOPATION.

As a general rule the position of the *accent* is indicated by bars drawn across the stave. GROVE *Dict. Mus.*

(2) A sign (∧) placed over a syllable or note to indicate the elevation of the voice; also, a sign used in old French music for the harpsichord, to indicate that a grace-note is to be inserted. This scheme [is] denominated *acceptilation,* from a term of the Roman law. SHEDD *Dogmatic Theology* vol. ii, p. 453. [s. 1889.] [< L. *acceptilatio(n-),* < *accipio* (see ACCEPT) + *latus,* borne.] **ac-cep"ti-la'ti-on‡.**

ac-cep'tion†, *n.* Acceptance; favoritism; acceptation.

ac-cep'tive, } 1 ak-sep'tıv; 2 ăc-çĕp'tiv, *a.* **1.** Appropriate.
ac-cep'tivˢ, } **2†.** Ready to accept.

ac-cep'tor, 1 ak-sep'tər; 2 ac-çĕp'tŏr (XIII), *n.* *Law.* One who has given his acceptance on a check, draft, order, or bill of exchange.— **acceptor supra protest,** one who, tho not a party to a bill of exchange, volunteers to accept it for the honor of the drawer after protest for non-acceptance by the drawee. **acceptor for honor‡.**

ac'cess, 1 ak'ses; 2 ăc'çĕs (XIII), *n.* **1.** The act or opportunity of approaching; a coming to or near; admittance, as to an interview: contrasted with *recess;* as, the *access* and recess of the sea. **2.** A way of approach or entrance; passage; path; as, a ready *access* to a waterway. **3.** Enlargement by addition; increase; accession; as, an *access* of territory. **4.** A coming on or attack, as of a sudden malady, or a fit of passion or zeal. **5.** *Liturg.* The approach of the priest to the altar for the celebration of mass. **6.** *R. C. Ch.* (1) In a conclave of cardinals, a supplementary ballot in which the voters may either cast a new vote for another candidate, if that candidate has received one vote in the regular ballot, or simply confirm a former vote.

The votes of both the ballot and the supplementary ballot (*access*) are counted together, and the candidate receiving a vote of two-thirds of the cardinals is declared elected pope. The effect of the access is the same as that of a transfer of votes except that by a transfer a candidate loses what he has already received; by the access he loses none, and may gain more.

(2) Authority granted a cleric to occupy a benefice when he becomes of age or the incumbent dies. (3) Introductory prayers or psalms prescribed by the church for the use of the officiating priest preceding the mass. **7.** *Law.* (1) The occurrence of copulation. (2) The opportunity or feasibility of communication for sexual intercourse. **8†.** A malady; fever; ague. [< F. *accès,* < L. *accessus,* < *accedo;* see ACCEDE.]

SYN.: addition, adit, admission, admittance, approach, course, entrance, increase, reception. *Approach* is a movement toward another; *access* is coming all the way to his presence, recognition, and consideration. An unworthy favorite may prevent even those who gain *admittance* to a king's audience from obtaining any real *access* to the king. In visiting a true friend, one is sure of ready *access* and kind *reception.* See INCREASE.— ANT.: departure, egress, exclusion, exit, repulse.— Prep.: *access to* the commander; *access to* the summit *by* a foot-path; *to* the chapel *through* the vestibule; an *access of* fever.— **access of Parliament** (*Eng. ac-ces'sa-ry, *n.* [-RIES, 1 -rɪz; 2 -rĭs, *pl.*] [Etymologically, *accessary* seems to be the proper substantive form to represent the *person*, but it has become in all cases practically interchangeable with *accessory*, *a.* & *n.*, and the latter now seems to be rapidly supplanting it in both common and legal usage. WHARTON *Precedents* favors *-ary*, but the *Encyc. Brit.* and the *International*, *New American*, and *Globe Encyclopedias*, BLACKSTONE, and COOLEY *Notes on Blackstone*, ABBOT *Law Dict.*, and the court decisions generally, use *-ory*, most of them exclusively and the rest prevailingly. In the *U. S. Statutes at Large*, *-ary* is used in the text (1790) and again in the *P. O. Laws* (1825); but *-ory* is used in the index and marginal notes, showing the later tendency to the use of *-ory*.]

1. A person who aids or abets in some act; an accessory. **2.** Anything that aids or is connected subordinately; an adjunct; accompaniment. [< L. *accessus*; see ACCESS.]— **ac-ces'sa-ry-ship,** *n.*

ac-ces'si-ble, 1 ak-ses'ɪ-bl; 2 ăc-çĕs'i-bl, *a.* Capable of being reached, got at, or entered; easy of access or approach; approachable; affable; hence, obtainable; attainable.

It . . . was *accessible* to whatever vagrant . . . might choose to enter through its ill-secured windows. HAWTHORNE *Works, Browne's Folly* vol. xii, p. 138. [ʜ. M. & CO. 1885.]

You never know till you try to reach them how *accessible* men are. BEECHER in *Proverbs from Plymouth Pulpit* p. 16. [A. 1887.]

[< LL. *accessibilis*, < L. *accedo*; see ACCEDE.]

Syn.: approachable, attainable, civil, companionable, complaisant, conversable, courteous, easy, familiar, free, friendly, obliging, sociable, unconstrained. *Accessible* is a synonym of *attainable* only in reference to places, where it is the stronger term, denoting a certain readiness of access. Points in the polar regions are *attainable* by dog-sledges, which are not *accessible* by ship, road, or path. See FRIENDLY; POLITE.— Ant.: austere, churlish, cold, difficult, distant, harsh, inaccessible, reserved, surly, unapproachable, unattainable, uncivil, unsociable.— Prep.: accessible *to* visitors; *by* a foot-path.— **ac-ces"si-bil'i-ty,** *n.*— **ac-ces'si-bly,** *adv.*

ac-ces'sion, 1 ak-seśh'ən; 2 ăc-çĕsh'on, *vt.* To enter in a library accession-book.

The new books have been promptly *accessioned*. GARDNER M. JONES *Salem, Mass., Public Library Report for 1891* p. 9.

ac-ces'sion, *n.* **1.** One who or that which is added; addition; increase; as, an *accession* of property.

Soon their numbers received fresh *accessions*, and their audacity became more marked.

STANLEY *In Darkest Africa* vol. i, ch. 12, p. 320. [ʟ. 1890.]

2. The act or process of being added or becoming joined to something; attainment, as of a possession or a right; induction or elevation, as to a dignity or office.

The *accession* of Edward, in 1547, . . . marks the era when England began to foreshadow her maritime superiority.

BANCROFT *United States* vol. i, ch. 3, p. 65. [ʟ. ɴ. & CO. 1876.]

3. Access; admittance; approach; as, the *accession* of light. **4.** Assent; agreement; consent; as, *accession* to a demand. **5.** *Law.* The acquisition of property of a concomitant nature by virtue of the ownership of the principal, to which it is accessory as an incident; as, a house built by one on the land of another accrues to the landowner by *accession*. **6.** A coming on, increase, or paroxysm, as of disease or folly. **7.** *R. C. Ch.* The transference of votes at a papal election. [F., < L. *accessio(n-)*, < *accedo*; see ACCEDE.]

Syn.: addition, arrival, augmentation, enlargement, extension, inauguration, increase, influx, installation, investment, reenforcement. See ENTRANCE; INCREASE.— Ant.: abandonment, abdication, declination, decrease, departure, diminution, removal, resignation, retirement, withdrawal. — Prep.: accession *of* numbers *to* the party; *of* the king *to* the throne.

— **ac-ces'sion-book",** *n.* The business record of volumes added to a library in order of receipt, giving a condensed description of the volume and the essential facts in its library history; also, the official register of the whole collection. **ac-ces'sion‡; a.-card** or **-cards‡; ac-ces'sions-cat"a-log‡.— a.-number,** *n.* The number given to a volume in the order of its addition to a library.— **a. to a treaty** (*Inter. Law*), the act of a sovereignty making itself an additional party to a treaty already existing as between others.— **deed of a.** (*Scots Law*), an instrument in writing, made by creditors, expressing concurrence in an assignment for the benefit of creditors by their debtor.

ac-ces'sion-al, 1 ak-seśh'an-əl; 2 ăc-çĕsh'on-al, *a.* Accessory; additional; as, *accessional* evidence.

ac-ces'sit, 1 ak-ses'ɪt; 2 ăc-çĕs'it, *n.* [L.] **1.** [Eng.] A college prize or certificate of approximate merit. **2.** *R. C. Ch.* In the papal conclave, an opportunity for a supplementary vote after a regular ballot. Compare ACCESS, 6 (1).

ac-ces'sive†, *a.* Additional.— **ac-ces'sive-ly†,** *adv.*

ac"ces-so'ri-al, 1 ak'se-sō'rɪ-əl; 2 ăc'çĕ-sō'ri-al, *a.* Of or pertaining to an accessory; contributory; as, *accessorial* agency.

ac-ces'so-ri-ness, 1 ak-ses'o-rɪ-nes; 2 ăc-çĕs'o-ri-nĕs, *n.* The state or quality of being accessory.

ac"ces-so'ri-us, 1 ak'se-sō'rɪ-us; 2 ăc'çĕ-sō'ri-ūs, *a.* [LL.] Accessory; auxiliary or subordinate, as various muscles.

ac"ces-so'ri-us, *n.* [-RI-I, 1 -ɑī; 2 -i, *pl.*] *Anat.* **1.** An accessory or auxiliary muscle. **2.** The spinal accessory nerve: so called because closely connected with the pneumogastric.

ac-ces'so-ry, 1 ak-ses'o-rɪ; 2 ăc-çĕs'o-ry (XIII), *a.* **1.** Aiding the principal design, or assisting subordinately the chief agent; contributory; supplemental; additional; as, **accessory nerves,** the eleventh pair of nerves, closely connected with or accessory to the pneumogastric nerve.

Accessory motives may aid in producing an action.

GEORGE ELIOT *Essays, Evangelical Teaching* p. 95. [ʟ. & w.]

2. *Law.* Aiding or assisting in a crime; privy; as, the tramp was *accessory* to the murder. **3.** *Geol.* Designating minerals forming so small a part of a rock as not to be necessarily included in its definition: opposed to *essential*. **4.** *Logic.* In the logical system of Lotze, adding (as thought) to the coherence of the matter of thought a notion of the ground of its coherence. [C.]

Syn.: abetting, acceding, additional, additive, assistant, assisting, auxiliary, complementary, conducive, contributing, contributory, helpful, helping, secondary, subsidiary, supplemental. See INCIDENTAL.— Ant.: cumbersome, disturbing, essential, immanent, incorporate, inherent, irrelevant, superfluous, superior, supreme, useless.— Prep.: *to*. —**accessory bud,** see under BUD.— **a. fruit,** an anthocarpous fruit; one in which some additional part or organ is united with the ovary.— **a. mineral, a. nucleus,** etc., see under the nouns.— **a. parts,** accompaniments.— **a. tones** (*Mus.*), harmonics.— **ac-ces'so-ri-ly,** *adv.*

ac-ces'so-ry, *n.* [-RIES, 1 -rɪz; 2 -rĭs, *pl.*] **1.** A person or thing that aids subordinately the principal agent; an adjunct; accompaniment. **2.** *Law.* A person who, tho not present, is concerned, either before or after, in the perpetration of a felony less than treason. See ACCESSARY. [< LL. *accessorius*, < L. *accedo*; see ACCEDE.]

Syn.: abetter or abettor, accomplice, ally, assistant, associate, attendant, coadjutor, colleague, companion, confederate, follower, helper, henchman, participator, partner, retainer. *Colleague* is used always in a good sense, *associate* and *coadjutor* generally so; *ally*, *assistant*, *associate*, *attendant*, *companion*, *helper*, either in a good or a bad sense; *abettor*, *accessory*, *accomplice*, *confederate*, almost always in a bad sense. *Ally* is oftenest used of national and military matters, or of some other connection regarded as great and important; as, *allies* of despotism. *Colleague* is applied to civil and ecclesiastical connections; members of Congress from the same State are *colleagues*, even tho they may be bitter opponents politically and personally. An *Associate* Justice of the Supreme Court is near in rank to the Chief Justice. A surgeon's *assistant* is a physician or medical student who shares in the treatment and care of patients; a surgeon's *attendant* is one who rolls bandages and the like. *Follower*, *henchman*, *retainer* are persons especially devoted to a chief, and generally bound to him by necessity, fee, or reward. *Partner* has come to denote almost exclusively a business connection. In law, an *abettor* (the general legal spelling) is always present, either actively or constructively, at the commission of the crime; an *accessory* never. An *accomplice* is usually a principal; an *accessory* never. If present, tho only to stand outside and keep watch against surprize, one is an *abettor*, and not an *accessory*. At common law, an *accessory* implies a principal, and can not be convicted until after the conviction of the principal; the *accomplice* or *abettor* can be convicted as a principal. *Accomplice* and *abettor* have nearly the same meaning, but the former is the popular, the latter more distinctively the legal, term. See APPENDAGE; AUXILIARY.— Ant.: adversary, antagonist, betrayer, chief, commander, enemy, foe, hinderer, instigator, leader, opponent, opposer, principal, rival.— Prep.: an accessory *to* the crime; *before* or *after* the fact; the accessories *of* a figure *in* a painting.— **accessory after the fact,** a person who, knowing a felony to have been committed, receives, relieves, comforts, conceals, or assists the felon.— **a. before the fact,** one who, before the act, instigates, aids, or encourages another to commit a felony, but is not present at its perpetration.

E. B. BROWNING *Casa Guidi Windows* pt. i, st. 9.

(2) Any unpleasant or unfortunate occurrence that causes injury, loss, suffering, or death. (3) *Med.* An unfavorable or unanticipated symptom. **2.** The assumed explanation of any casual event; chance; fortune; as, it came by *accident*. **3.** Any circumstance, accompaniment, or attribute regarded as present by chance, and therefore non-essential. **4.** *Logic.* (1) Any feature, element, or accompaniment of an object not essential to the conception of it.

Logic has sometimes divided *accidents* into **separable a.,** or that of which an individual may be deprived without destroying its individuality, and **inseparable a.,** or that essential to the nature of the individual as such, but not essential to the definition of the genus to which it belongs. (2) In a wider sense, anything, whether essential or not, considered as belonging to a subject or substance and predicable of it; an ascript. **5.** *Gram.* An inflection, such as those of gender, number, etc. **6.** *Her.* Any unessential point or mark in a coat of arms. [< L. *acciden(t-)s*, ppr. of *accido*, happen, < *ad*, upon, + *cado*, fall.]

Syn.: adventure, calamity, casualty, chance, contingency, disaster, fortune, hap, happening, hazard, incident, misadventure, mishap, possibility. An *accident* is that which happens without any one's direct intention; a *chance* that which happens without any known cause. If the direct cause of a railroad *accident* is known, we can not call it a *chance*. To the theist there is, in strictness, no *chance*, all things being by divine causation and control; but *chance* is spoken of where no special cause is manifest: "By *chance* there came down a certain priest that way." *Luke* x, 31. We can speak of a game of *chance*, but not of a game of *accident*. "*Accident* is said ordinarily of things that have been, *chance* of things that are to be. That is an *accident* which is done without intention; that is a *chance* which can not be brought about by the use of means." CRABB *Eng. Synonymes*. An *incident* is viewed as occurring in the regular course of things, but subordinate to the main purpose, or aside from the main design. *Fortune* and *chance* are nearly equivalent, but *chance* can be used of human effort and endeavor as *fortune* can not be: we say "he has a *chance* of success," or "there is one *chance* in a thousand," where we could not substitute *fortune*; as personified, *Fortune* is regarded as having a fitful purpose, *Chance* as purposeless: we speak of fickle *Fortune*, blind *Chance*; "*Fortune* favors the brave." *Fortune* is the result of inscrutable controlling forces. The slaughter of men is an *incident* of battle; unexpected defeat, the *fortune* of war. Since the unintended is often the undesirable, *accident* tends to signify some *calamity* or *disaster*, unless the contrary is expressed, as when we say a fortunate or happy *accident*. An *adventure* is that which may turn out ill, a *misadventure* that which does turn out ill. A slight disturbing *accident* is a *mishap*. See CASE; EVENT; HAZARD.— Ant.: appointment, calculation, certainty, decree, fate, foreordination, intention, law, necessity, ordainment, or dinance, plan, preparation, provision, purpose.— Prep.: the accident *of* birth; an accident *to* the machinery.

— **accident yield** (*Forestry*), trees cut because damaged, as by fire, wind, snow, or insects.— **inevitable a.** (*Law*), an occurrence which could not have been avoided by any degree of care capable of being exercised under the circumstances.

Patience; accomplish thy labor; accomplish thy work of affection! Longfellow Evangeline pt. ii, § 5, st. 1.

3. To make complete; perfect, as in external equipments or in mental acquirements; polish. 4. To gain. [< F. accomplissant, ppr. of accomplir, < LL. accomplere, < L. ad, to, + compleo; see COMPLETE, v.]

Syn.: achieve, bring about, bring to pass, carry out, carry through, complete, consummate, discharge, do, effect, execute, finish, fulfil, perform, realize. Do is the one comprehensive word which includes this whole class. We may say of the least item of daily work, "It is done," and of the grandest human achievement, "Well done!" Finish and complete signify to bring to an end what was previously begun; there is frequently the difference in usage that finish is applied to the fine details and is superficial, while complete is comprehensive, being applied to the whole ideal, plan, and execution; as, to finish a statue; to complete a scheme of philosophy. To discharge is to do what is given in charge, expected, or required; as, to discharge the duties of the office. To fulfil is to do or to be what has been promised, expected, hoped, or desired; as, a son fulfils a father's hopes. Realize, effect, execute, and consummate all signify to embody in fact what was before in thought. One may realize that which he has done nothing to bring about; he may realize the dreams of youth by inheriting a fortune; but he can not effect his early designs except by doing the utmost that is necessary to make them fact. Effect includes all that is done to accomplish the intent; execute refers rather to the final steps; consummate is limited quite sharply to the concluding act. An officer executes the law when he proceeds against its violators; a purchase is consummated when the money is paid and the property delivered. Execute refers more commonly to the commands of another, effect and consummate to one's own designs; as, the commander effected the capture of the fort, because his officers and men promptly executed his commands. Achieve—to do something worthy of a chief—signifies always to perform some great and generally some worthy exploit. Perform and accomplish both imply working toward the end; but perform always allows a possibility of not attaining, while accomplish carries the thought of full completion. In Longfellow's lines, "Patience; accomplish thy labor," etc., perform could not be substituted without great loss. As between complete and accomplish, complete considers rather the thing as done; accomplish, the whole process of doing it. We finish a garment or a letter, complete an edifice or a life-work, consummate a bargain or a crime, discharge a duty, effect a purpose, execute a command, fulfil a promise, perform our daily tasks, realize an ideal, accomplish a design, achieve a victory. a-cerb′, 1 ə-sūrb′; 2 ą-çērb′, *a.* Sour and somewhat bitter and astringent; harsh; sharp: used literally and figuratively. [< L. *acerbus*, < *acer*, sharp.]

Many *acerb*, hard-faced, rough, severe men, . . . will serve you ten times as much as many waxy-cheeked, good-natured, abdominal men. H. W. BEECHER in Drysdale's *Proverbs from Plymouth Pulpit, Love* p. 211. [A. 1887.]

ac′er-bate, 1 as′ər-bēt; 2 ăç′er-bāt (XIII), *vt.* [-BAT′ED; -BAT′ING.] To make sour, crabbed, or harsh; embitter; exasperate; as, to *acerbate* a person, or his temper, etc. —**ac′er-bate,** *a.* Embittered; exasperated. —**ac′er-bent,** *a.* Astringent; harsh. —**a-cer′bic,** *a.* Austere; harsh; severe.

a-cer′bi-ty, 1 ə-sūr′bı-tı; 2 ą-çēr′bi-ty, *n.* [-TIES, 1 -tiz; 2 -tis, *pl.*] **1.** Sourness, with bitterness and astringency; roughness of taste, as of unripe fruit. **2.** Severity, as of temper, language, pain, etc.; harshness; sharpness; as, "pitiless *acerbity* in . . . criticism," GEORGE ELIOT *Adam Bede* ch. 14, p. 131. [< F. *acerbité*, < L. *acerbita(t-)s*, < *acerbus*: see ACERB.] **a-cer′bi-tudę†.**

ac′er-dese, 1 as′ər-dīs; 2 ăs′er-dēs, *n.* [F.] *Mineral.* Same as MANGANITE.

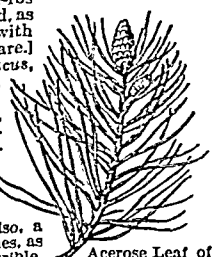
ac″er-el-la′tous, 1 as″ər-e-lē′tus; 2 ăç″er-ę-lā′tŭs, *a. Bot.* Blunted at the end. [< Gr. *akeros;* see ACERA.]

a-cer′ic, 1 ə-ser′ık; 2 ą-çēr′ic, *a.* Of, pertaining to, or derived from the maple. [<ACER.] —**aceric acid,** a compound derived from the sap of the European maple (*Acer campestre*): probably identical with malic acid.

a-cer′i-de, 1 ə-ser′ı-dī; 2 ą-çēr′i-dē, *n.* Plaster made without wax. [< Gr. *a-* priv. + *keros*, wax.]

Ac″er-i-ni′næ, 1 as″ər-ı-nai′nē; 2 ąç″ēr-i-nī′nē, *n. pl. Ich.* A subfamily of percoid fishes including the ruff. [< Gr. *akeros;* see ACERA.] **Ac″er-i′na,** *n.* (t. g.) —**a-cer′i-nine,** *a.*

ac′e-rose, 1 as′ı-rōs; 2 ăç′e-rōs (XIII), *a.* **1.** *Bot.* Needle-shaped, as pine-leaves; linear or slender, with a sharp stiff point. **2.** [Rare.] Chaffy. [< L. *acerosus*, < *acus*, chaff, confused with *acus*, needle.] **ac′e-rous¹†.**



Acerose Leaf of Pine (*Pinus mitis*).

ac′e-rous², 1 as′ı-rus; 2 ąç′e-rŭs, *a. Zool.* **1.** Having rudimentary or no antennæ; of or pertaining to the *Acera* (*Arachnida*). **2.** Destitute of horns.

a-cer′ra, 1 ə-ser′ə; 2 ą-çēr′a, *n.* [L.] **1.** *Rom. Antiq.* An incense-box used in sacrifices; also, a small altar for burning perfumes, as before a bier. **2.** *Eccl.* A thurible.

A-cer′ra, 1 ə-cher′ra; 2 ā-chēr′rā, *n.* **1.** A town in Caserta province, Italy. **2.** An ancient city of Cisalpine Gaul; now Ghera.

ac″er-tain′t, *vt.* To ascertain.

a-cer′val, 1 ə-sūr′vəl; 2 ą-çēr′val, *a.* [Rare.] Of or pertaining to a heap. [< L. *acervalis*, < *acervus*, heap.]

—**a-cer′vu-lin(e),** *a.* Like or having the form of little heaps.—**a-cer′vu-lus,** *n.* [-LI, *pl.*] **1.** *Anat.* A mass of calcareous particles found in and around the pineal body of the brain; brainsand; *acervulus cerebri*. **2.** *Bot.* A spore-producing pustule of parasitic *Fungi imperfecti*, as *Colletotrichum* and *Gloeosporium*, developed just within the tissues of the host plant and causing anthracnose.

ac′er-vate, 1 as′ər-vēt; 2 ăç′er-vāt. **I.** *vt.* [Rare.] To heap up. **II.** *a.* Massed together; growing compactly in heaps or clusters.—**ac′er-vate-ly,** *adv.*—**ac″er-va′tion,** *n.* —**a-cer′va-tiv(e),** *a.* Tending to heap up; acervate.—**ac′er-vose,** *a.* Full of heaps.

A-cer″vu-la′ri-a, 1 ə-sūr″viu-lē′ri-ə; 2 ą-çēr″vū-lā′ri-a, *n. pl. Paleon.* A genus of fossils of the Silurian and Devonian epochs, belonging to the tetracoral family (*Cyathophyllidæ*), growing in colonies, and having vesicular tissues in the peripheral zone, tabulæ in the center, and strong septa.

a-ces′cence, 1 ə-ses′ens; 2 ą-çēs′ęnç, *n.* A souring by acetous fermentation. [F., < L. *acescen(t-)s*, ppr. of *acesco*, < *aceo*, be sour.]

a-ces′cen-cy, 1 ə-ses′en-sı; 2 ą-çēs′ęn-çy, *n.* The state or quality of being acescent or of turning sour; slight sourness.

a-ces′cent, 1 ə-ses′ent; 2 ą-çēs′ęnt. **I.** *a.* Becoming or tending to become tart or acid, as by acetous fermentation; slightly sour. **II.** *n.* That which is slightly acid.

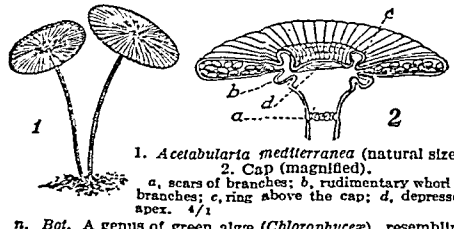
A-ces′tes, 1 ə-ses′tız; 2 ą-çēs′tēs, *n. Myth.* A son of a Sicilian river-god who flourished in the Trojan war.

ac′et-. *Chem.* **1.** Acetyl. **2.** The radical CH_3CO. [Combining form of ACETIC, ACETYL, before a vowel.]

ac′e-ta-blę†, *n.* **1.** *Rom. Antiq.* (1) Same as ACETABULUM, 3. (2) A fluid measure of about half a gill. (3) A juggler's cup. **2.** *Anat.* The acetabulum.

ac″e-tab′u-lar, 1 as′ı-tab′yu-lər; 2 ăç″e-tăb′yu-lar, *a.* Of, pertaining to, or like an acetabulum; cup-shaped. **ac″e-tab′u-late‡.—acetabular bone,** a small bone occasionally found in early life at the edge of the socket of the hip-joint.

Ac″e-tab″u-la′ri-a, 1 as′ı-tab′yu-lē′ri-ə; 2 ăç″e-tăb″yu-lā′ri-a,



1. *Acetabularia mediterranea* (natural size). 2. Cap (magnified).
a, scars of branches; *b*, rudimentary whorl of branches; *c*, ring above the cap; *d*, depressed apex. 4/1

n. Bot. A genus of green algæ (*Chlorophyceæ*), resembling small mushrooms. [< ACETABULUM.]

Ac″e-tab″u-lif′er-a, 1 as′ı-tab′yu-lif′ər-ə; 2 ăç″e-tăb″yu-lif′-er-a, *n. pl. Zool.* The cephalopod order *Dibranchiata*.—**ac″e-tab″u-lif′er-ous,** *a.* Provided with acetabula; of, pertaining to, or like the *Acetabulifera*.—**ac″e-tab′u-li-form,** *a.* Cup-shaped. **ac″e-tab′u-lous‡.**

ac″e-tab′u-lum, 1 as′ı-tab′yu-lum; 2 ăç″e-tăb′yu-lŭm, *n.* [-LA, 1 -la; 2 -la, *pl.*] **1.** A cup-shaped cavity or organ of the shape and size of the ancient vinegar-cup. Specif.: (1) *Anat.* A cavity or socket, as of the innominatum or hip-bone, which receives the head of the thigh-bone. (2) *Zool.* A sucker, as on the arms of cephalopods, the scolex of tapeworms, etc.

Each *acetabulum* [in cephalopods] is a sessile or stalked cup.
HUXLEY *Anat. Invert.* ch. 8, p. 460. [A. 1888.]

(3) *Entom.* The articulating cavity for the leg of an insect. (4) *Bot.* The receptacle of some lichens and fungi. **2.** *Zool.* A placental lobe or cotyledon, as of a ruminant. **3.** *Rom. Antiq.* A small cup or vase, properly for holding a condiment; acetable. **4.** An old form of musical instrument played as a kettle-drum or as cymbals. [L., < *acetum;* see ACETUM.]

ac′et-al, 1 as′et-al; 2 ăç′ęt-ăl (XIII), *n. Chem.* **1.** A colorless liquid ($C_6H_{14}O_2$) found in crude spirit and old wines: produced by the imperfect oxidation of alcohol. **2.** Any one of several related compounds obtained from aldehydes by heating with alcohol. [< ACET- + *al-*(in ALCOHOL).]

ac″et-al′de-hyde, 1 as′et-al′dı-huid; 2 ăç″ęt-ăl′de-hȳd, *n. Chem.* Acetic, common, or ethyl aldehyde (CH_3CHO).

ac″et-am′id, } 1 as′et-am′id, -id *or* -aid; 2 ăs″ęt-ăm′id,
ac″et-am′ide, } -id *or* -id (XIII), *n.* The amid of acetic acid; a white crystalline compound (CH_3CONH_2) formed by heating acetic ether with ammonia. [< ACET- + AMID.]

ac″et-an′i-lid, } 1 as′et-an′ı-lid, -lid *or* -laid; 2 ăç″ęt-
ac″et-an′i-lide, } ăn′i-lid, -lid *or* -lid, *n. Chem.* An acetyl derivative of anilin ($C_6H_5NHCOCH_3$), consisting of white shining crystalline scales: used in medicine as a sedative and antipyretic.

ac″et-an′i-on, 1 as′et-an′ı-ən; 2 ăç″ęt-ăn′i-on, *n. Chem.* A compound ($C_2H_3O_2$) anion of acetic acid or acetates in water solutions. [< ACET- + ANION.]

ac′e-tart, *n.* A salad of raw herbs. **ac′e-tarrt.**

ac″e-ta′ri-ous, 1 as′ı-tē′ri-us; 2 ăç″e-tā′ri-ŭs, *a.* **1.** Used in salads; as, *acetarious* vegetables. **2.** Containing acetary.

ac′e-ta-ry, 1 as′ı-tē-rı; 2 ăç′e-tā-ry, *n.* An acid pulpy substance in the pear, quince, etc., contained in a small mass of gritty particles near the base of the fruit. [< L. *acetaria*, salad, < *acetum;* see ACETUM.]

ac′e-tate, 1 as′ı-tēt; 2 ăç′e-tāt, *n.* A salt of acetic acid. [< ACETIC.] —**cupric acetate,** a greenish salt of acetic acid ($Cu(C_2H_3O_2)_2H_2O$).

ac′e-tat″ed, 1 as′ı-tēt″ed; 2 ăç′e-tāt″ĕd, *a.* United with acetic acid.

ac′e-te-nyl, 1 as′ı-tı-nil; 2 ăç′e-te-nȳl, *n. Chem.* An organic radical (C_2H) existing only in combination, as in acetylene hydrid. [< ACETIC + -ENE + -YL.]

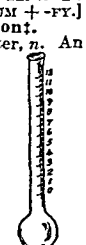
ac e′ti-am, 1 ak ı′shi-am; 2 ăc ē′shi-ăm. [L.] *Law.* Literally, and also: applied to the clause in a writ expressing the true cause of action, where a false cause was alleged to give jurisdiction.

a-cet′ic, 1 ə-set′ık *or* ə-sī′tık; 2 ą-çęt′ic *or* ą-çē′tic, *a.* Of, pertaining to, or of the nature of vinegar; derived from, producing, or containing vinegar; sour. [< L. *acetum*, vinegar, < *aceo*, be sour.] —**acetic acid,** a colorless, pungent, mobile liquid ($C_2H_4O_2$), usually obtained by the destructive distillation of wood or by the oxidation of alcohol with ferments. Its antidote is soap, alkalis, or oily drinks. Vinegar is a dilute and impure acetic acid produced by fermentation.—**a. anhydrid, a. oxid,** a colorless mobile liquid ($C_4H_6O_3$) which becomes acetic acid on being mixed with water; dehydrated acetic acid.—**a. ether,** any compound of acetic acid and an alcohol radical: specif., ethyl acetate ($C_4H_8O_2$), a transparent, pungent, inflammable liquid, used as a stimulant.—**a. ferment,** a minute fungus (*Mycoderma aceti*) that acts as the carrier of oxygen in making vinegar. —**crystallizable or glacial a. acid,** the pure acid at a temperature below 62° Fahr.

a-cet′i-fi″er, 1 ə-set′ı-fai″ər; 2 ą-çęt′i-fi″er, *n.* An apparatus for producing acetification.

a-cet′i-fy, 1 ə-set′ı-fai; 2 ą-çęt′i-fȳ, *v.* [-FIED; -FY′-ING.] **I.** *t.* To convert into acid or vinegar. **II.** *i.* To become acid; change into vinegar. [< ACETUM + -FY.] **ac′e-tize‡.—a-cet″i-fi-ca′tion,** *n.* **ac″e-ta′tion‡.**

ac″e-tim′e-ter, 1 as′ı-tim′ı-tər; 2 ăç″e-tĭm′e-ter, *n.* An instrument, as a burette or hydrometer, for ascertaining the strength of acetic acid or of any liquid containing it, as vinegar. [< L. *acetum* (see ACETUM) + Gr. *metron*, measure.] **ac″e-tom′e-ter‡.—ac″e-tim′e-try,** *n.* Measurement with an acetimeter.—**ac″e-ti-met′ri-cal,** *a.*



Acetimeter.

ac′e-tin, 1 as′ı-tin; 2 ăç′e-tĭn, *n. Chem.* A compound of glycerin and acetic acid in which one, two, or three atoms of hydrogen in the former are replaced by acetyl, forming respectively monacetin ($C_5H_{10}O_4$), diacetin ($C_7H_{12}O_5$), and triacetin ($C_9H_{14}O_6$). [< ACETIC.]

ac″et-naph′ta-lid, 1 as′et-naf′tə-lid; 2 ăç″ęt-năf′ta-lid, *n. Chem.* A colorless crystalline compound ($C_{10}H_7NHCOCH_3$), obtained by heating α-naphthol with ammonium acetate. **ac″et-naph″tyl-am′in‡.**

ac′e-to-, 1 as′ı-to-; 2 ăç′e-to-. *Chem.* Pertaining to, containing, or derived from acetic acid, acetyl, or their derivatives: a combining form used in a number of chemical compounds; as, *aceto*bromid, *aceto*gelatin, *aceto*acetic, etc. [< L. *acetum*, vinegar.] —**ac″e-to″ac′e-tate,** *n.* A salt derived from aceto-acetic acid.—**aceto-acetic acid,** an acid ($CH_3COCH_2CO_2H$) present in the urine of diabetic persons and of others suffering with fevers.—**ac″e-to-chlor-hy′drose,** *n.* A dextrogyrate compound ($C_6H_7(C_2H_3O)_4O_4Cl$), produced by the action of chlorid on δ-glucose.

Other words beginning with this prefix will be found recorded in alphabetical place, either singly or in groups.

ac′e-tol, 1 as′ı-tōl *or* -tel; 2 ăç′e-tōl *or* -tŏl, *n. Chem.* A colorless liquid (CH_3COCH_2OH), obtained by treating monochloracetone with potassium acetate and subsequent hydrolysis with barium carbonate. It is the simplest representative of ketone alcohols or ketols.

ac″e-to-la′tum, *n. Pharm.* Any substance containing a volatile oil, as an aromatic essence, distilled in vinegar.

ac″e-to-nam′in, *n.* A compound amin, obtained by the action of ammonia on acetone, generally at high temperatures.

ac′e-tone, 1 as′ı-tōn; 2 ąç′e-tōn, *n. Chem.* **1.** An inflammable liquid (C_3H_6O), with a biting taste, obtained by the destructive distillation of acetates and various organic compounds; dimethyl ketone. It is used in making chloroform, and as a solvent for fats, camphor, and resins. **2.** Any of the ketones. [< ACETIC.] —**acetone alcohol,** same as ACETOL.—**a. chloroform,** see CHLORETONE.—**ac′e-tone-oil″,** *n. Chem.* A by-product obtained in the manufacture of acetone from acetate of lime. It consists largely of higher ketones and is employed as a solvent for crude anthracene and for denaturing alcohol.—**a. resorcin,** *n. Chem.* A colorless crystalline compound ($C_6H_4O_2C(CH_3)_2$), obtained by condensing equal molecules of resorcin and acetone. **a. resorcinol‡.**

ac″e-to-ne′mi-a, *n. Pathol.* A morbid condition due to the development of acetone in the blood. **ac″e-to-næ′mi-a†.** —**ac″e-ton′ic,** *a.* Derived from acetone; as, **acetonic acid,** a white crystalline compound ($C_4H_8O_2$); oxyisobutyric acid.

ac′e-to-nin, 1 as′ı-to-nin; 2 ăç′e-to-nĭn, *n. Chem.* A base ($C_9H_{18}N_2$), resulting from the interaction of acetone, ammonia, and carbon bisulfid: readily decomposed and occurring as a thiocarbonate. **ac′e-to-nine‡.**

ac″e-to-ni′tril, 1 as′ı-to-nai′tril; 2 ăç′e-to-ni′tril, *n.* A colorless inflammable liquid (C_2H_3N), with an agreeable odor, obtained by treating acetamid with glacial acetic acid; methyl cyanid; ethenyl nitril. **ac″e-to-ni′trile‡.**

ac′e-to-nyl, 1 as′ı-to-nil; 2 ăç′e-to-nȳl, *n. Chem.* An organic univalent radical (CH_3COCH_2) existing only in combination, as in acetone hydrid.

—**acetonyl acetonate.** A salt of acetonyl acetone.—**a. acetone** (*Chem.*), a freely flowing compound (CH_3COCH_2-$CH_2.CO.CH_3$), with an agreeable odor, obtained as by heating pyrotritartaric acid with water.

ac″e-top′a-thy, *n. Med.* Treatment by local application of acetic acid.—**ac″e-to-phe′nin,** *n.* A condensation product of ammonia and acetophenone, occurring as needles and possessing weak basic properties.—**ac″e-to-phe′none,** *n.* A colorless liquid (C_8H_8O), obtained by distilling calcium acetate and calcium benzoate, used as a hypnotic; hypnone; phenyl methyl ketone.—**ac″e-to-py′rin,** *n.* A crystalline compound of acetysalicylic acid (aspirin) with antipyrin. **ac″e-to-py′rinę†.**

ac′e-tos′i-tyt, *n.* Acidity.

ac′e-tous, 1 as′ı-tus *or* ə-sī′tus; 2 ăç′e-tŭs *or* a-çē′tŭs, *a. Chem.* Of, pertaining to, or producing acetic acid or vinegar; sour; tart. [< LL. *acetosus*, < L. *acetum;* see ACETUM.] **ac′e-tose‡; ac″e-to′sous‡.** Syn.: see ACID.

—**acetous acid,** vinegar or diluted acetic acid: formerly and erroneously so called, from the supposition that it contained less oxygen than acetic acid.

ac″et-ox′im, 1 as′et-oks′im; 2 ăç″ęt-ŏks′im, *n. Chem.* A colorless, volatile, crystalline compound, $(CH_3)_2CN.OH$, formed by the action of hydroxylamin on acetone. [< ACETIC + OXM.] **ac″et-ox′imę‡.**

ac″et-ox′y-, 1 as′et-oks′ı-; 2 ăs″ęt-ŏks′y-. *Chem.* Containing the group CH_3COO: a combining form. [< ACETO- + OXY-.]

ac″et-ox′yl, 1 as′et-oks′il; 2 ăç″ęt-ŏks′yl, *n. Chem.* **1.** Acetyl: a name used by Kolbe and others. **2.** The radical $CH_2(OH)CO$. **3.** The radical $O.C_2H_3O$: usually in combination in senses 2 and 3.

ac′e-to-zone, *n.* Same as BENZOZONE.

ac″et-par-a-am″i-do-sal′ol, *n. Chem.* Same as SALOPHEN.

ac″et-phe-net′i-din, 1 as′et-fi-net′ı-din; 2 ăç″ęt-fe-nęt′i-din, *n.* Same as PHENACETIN.

ac′e-tract, 1 as′ı-trakt; 2 ăç′e-trăct, *n. Chem.* An extract in solid form made from a drug with a solvent partly composed of acetic acid.

a-ce′tum, 1 ə-sī′tum; 2 ą-çē′tŭm, *n.* Vinegar. [L., < *aceo*, be sour.]

aceturic acid. An acetyl derivative ($C_2H_3O.NHCHCO_2H$) of glycin, melting at 206° C.

ac′e-tyl, 1 as′ı-til; 2 ąç′e-tȳl, *n. Chem.* The hypothetical monatomic radical (C_2H_3O) of acetic acid. [< ACET- + Gr. *hylē*, substance.] —**ac″e-tyl′ic,** *a.*

—**ac″e-tyl-ac′e-tone,** *n.* A colorless liquid (CH_3COCH_2-$COCH_3$), formed by treating acetyl chlorid with aluminum chlorid.—**ac″e-tyl-bro′mid,** *n. Chem.* A heavy, pungent liquid (CH_3COBr), obtained by the action of phosphorus tribromid on sodium acetate: used in organic synthesis.—**acetyl chlorid** (*Chem.*), a colorless, fuming, highly refracting liquid (CH_3COCl), a reaction product of acetic acid with phosphorus trichlorid, used as a reagent in organic synthesis and in analysis.—**a. oxid,** same as ACETIC ANHYDRID.—**ac″e-tyl-gly′cin,** *n.* Same as ACETURIC ACID.—**a. phenyl hydrazin** (*Chem.*), a colorless crystalline powder ($C_8H_{10}N_2O$), formed by the union of glacial acetic acid and phenyl hydrazin by heat, used as an analgetic and antipyretic. **hy-drac′e-tin‡; py′ro-din‡.**—**ac″e-tyl-thy′mol,** *n.* Same as THYMYL ACETATE. —**ac″e-tyl-tro-pe′in,** *n. Chem.* A colorless sirupy compound ($C_8H_{14}NOCOCH_3$), obtained by acetylating tropin.—**a. value** (*Chem.*), a value, as of fatty substances, ascertained by analysis and based on their degree of acetylization.

a-cet′y-late, 1 ə-set′ı-lēt; 2 ą-çęt′y-lāt, *vt.* [-LAT′ED; -LAT′ING.] *Chem.* To introduce one or more acetyl groups into (a compound), usually by substituting the hydrogen of hydroxyl, amino or inimo groups.

ac″e-tyl-a′tion, 1 as′ı-til-e′shən; 2 ăç′e-tȳl-ą′shon, *n.* Same as ACETYLIZATION.—**acetylation test,** the treatment of fatty materials and glycerol with acetic anhydrid, or acetylation, during a chemical examination.

a-cet′y-lene, 1 ə-set′ı-lin; 2 ą-çęt′y-lēn (XIII), *n.* The most brilliant of illuminating gases (C_2H_2). It may be produced synthetically from its elements, by incomplete combustion of coal gas, and commercially from calcium acetylid (CaC_2) by the action of water. [< ACETYL-.]

a-cet″y-lene-car′ba-mid, *n.* Same as ACETYLENE-UREA.—**acetylene tetrabromid,** a yellowish liquid ($C_2H_2Br_4$), used in microscopy, etc.—**a-cet″y-le-ne-u′re-a,** *n.* A colorless crystalline compound, $(CON_2H_2)_2C_2H_2$, obtained by reducing allantoin with sodium amalgam.

a-cet′y-lid(e), 1 ə-set′ı-lid *or* -laid; 2 ą-çęt′y-lid *or* -lid, *n. Chem.* A compound of acetylene with its replaceable hydrogen substituted by a base; as, cuprous *acetylide*.

ac″e-tyl-i-za′tion, *n. Chem.* The act of uniting with or producing combinations of acetic acid or acetyl.

A. C. G. S., *abbr.* Acting Commissary-General of Subsistence.

ach, 1 ach; 2 ăch, *n.* [E. Ind.] The Indian mulberry (*Morinda tinctoria*).—**ach′-root″,** *n.* Its root, furnishing a dye.

ach, 1 ąH; 2 ăH, *interj.* [G. or Celt.] Ah.

A-chæ′a, 1 ə-kī′ə; 2 ą-çē′a, *n.* **1.** A narrow district of Greece on the north coast of Peloponnesus. **2.** A Roman province of the time of Christ, including Peloponnesus, part of Greece, and adjacent islands. **3.** Loosely, Greece. **A-cha′ia‡** [Gr.]. —**A-chæ′an,** *a.* & *n.* See ACHEAN.

A-chæm′e-nes, 1 ə-kem′ı-nīz; 2 ą-çĕm′e-nēş, *n.* **1.** An early Persian king; founder of Achæmenidæ. **2.** A brother of Xerxes and governor of Egypt.

Ach″æ-men′i-an, 1 ak″ı-men′ı-ən *or* -mi′nı-ən; 2 ăç″ē-mĕn′i-an *or* -mē′ni-an, *a.* Of or pertaining to (1) the ancient Persian dynasty descended from Achæmenes, or (2) the Persian language of the period.

The dynasty of the Achæmenidæ began with the imme-

diate predecessors of Cyrus, in the 6th century B. C., and came to an end with the conquest of Alexander (330 B. C.).

The discovery of the alphabet, the language, the grammar, and the meaning of the [cuneiform] inscriptions of the *Achæmenian* dynasty deserves to be classed with the discoveries of a Kepler, a Newton, or a Faraday. MULLER *Chips* vol. i, p. 260. [s. 1874.]

Ach"æ-men'i-an, *n.* **1.** One of the Persians of the time of the dynasty of Achæmenes. **2.** The language of the Achæmenians, which is one of cuneiform inscriptions, found at Behistun and Persepolis, and held to represent the second stage in the growth of the Persian language, as distinguished from the earlier Accadian and the later Huzvaresh or Pahlavi.

Ach"æ-men'i-dæ, 1 ak"ı-men'ı-dī; 2 ăc"e-mĕn'ı-dē, *n. pl.* An ancient Persian dynasty to which Cyrus, Cambyses, Darius Hystaspes, and Xerxes belonged.

a-chæ'no-carp, *n. Bot.* Same as ACHENOCARP.

A-chæ'no-don, 1 ə-kī'no-dŏn; 2 ə-cē'no-dŏn, *n. Paleon.* A genus of Eocene mammals resembling the pig. [< Gr. *a-* priv. + *chainō*, gape, + *odous*, tooth.]

A-chæ'ta, 1 ə-kī't; 2 ə-cē'ta, *n. pl. Helminth.* An order of gephyrean worms without setæ. [< Gr. *a-* priv. + *chaitē*, hair.] — **a-chæ'tous,** *a.* Without setæ; pertaining to the *Achæta*.

A-chæ'us, 1 ə-kī'ŭs; 2 ə-cē'ŭs, *n.* A Greek tragic poet who flourished 484 B. C. **A-chal'ost** [Gr.].

a-chafe'†, *vt.* [F.] To make hot.

a'chage, 1 ē'kaj; 2 ā'ceaj, *n.* [Rare.] A state of aching.

A-cha'ia, 1 ə-kē'ə *or* -yə; 2 ə-cā'ə *or* -ya, *n.* A department or nome in Morea, Greece; 1,900 sq. m. See ACHÆA. [17.

A-cha'i-cus, 1 ə-kē'ı-cus; 2 ə-cā'ı-cŭs, *n. Bib. 1 Cor.* xvi.

a-chro'ma, 1 ə-krō'mə; 2 a-crō'ma, *n. Pathol.* **1.** A deficiency of coloring-matter in the skin. **2.** A decoloration of the skin, either general, as in the albino, or in patches, as in the pied negro. [< Gr. *a-* priv. + *chrōma*, color; see CHROMATIC.] **ach"ro-ma'si-aʇ.** — **achroma unguium** (*Pathol.*), the occurrence of white spots on the nails. **ach'ro-mat,** 1 ak'ro-mat; 2 ăc'ro-măt, *n. Optics.* An achromatic lens or system of lenses: a trade name.

ach"ro-mat'ic, 1 ak'ro-mat'ık; 2 ăc'ro-măt'ic. **I.** *a.* **1.** Free from color; colorless; transmitting light without showing or separating it into its constituent

colors, as a lens which gives an *achromatic* image. See LENS. 2. (1) Resisting the usual staining agents. (2) Containing achromatin, as a tissue. 3. *Mus.* Unmodulated; without accidentals. **II.** *n.* An achromatic lens or a telescope fitted with one. [< Gr. *achrōmatos*, < *a-* priv.; and see CHROMATIC.] **a-chro'mic†.**

—achromatic figure (*Biol.*), that portion of the figure formed in cell-division (mitosis) which is not stained by reagents.— **a. mass** (*Biol.*), any part of the figure formed in cell-division which is not stained by reagents.

—ach"ro-mat'i-cal-ly, *adv.*

a-chro'ma-tin, 1 ə-krō'mə-tin; 2 a-crō'ma-tĭn, *n. Biol.* The substance in the cell-nucleus which does not readily take color from basic stains. See CHROMATIN and illus. under CELL. [< A-, not, + CHROMATIN.]

—a-chro"ma-tiz'a-bl(eF, *a.* Capable of being made achromatic. **a-chro"ma-tis'a-ble‡.— a-chro'ma-tize** or **-tise,** *vt.* To render achromatic, as by adjoining a lens, prism, or other refracting body of opposite dispersing power. **—a-chro"ma-ti-za'(or -sa')tion,** *n.*— **a-chro'ma-to-cyte,** *n.* A decolorized red blood-corpuscle.— **a-chro"ma-tol'y-sis,** *n. Pathol.* Morbid change in the achromatic portion of a cell.— **a-chro'ma-top"sy,** *n.* Color-blindness; acritochromacy. **a-chro"ma-top'si-a†.— a-chro"ma-to'sis,** *n. Pathol.* Morbid lack of coloring-matter in the skin or hair.— **a-chro'ma-tous,** *a.* Having less than the normal color; colorless. **a-chro"ma-tis'tous‡.— ach"ro-ma-tu'ri-a,** *n. Pathol.* Absence of color in the urine.

a-chro'ma-tism, 1 ə-krō'mə-tizm; 2 ā-crō'ma-tĭşm, *n.* The state or quality of being achromatic. **a-chro"ma-tic'i-ty‡.**

ach"ro-moph'i-lous, 1 ak'ro-mof'i-lus; 2 ăc'ro-mŏf'i-lŭs, *a.* Not readily stainable.

ach"ro-mo-trich'i-a, 1 ak'ro-mo-trik'i-ə; 2 ăc'ro-mo-trĭc'i-a, *n. Pathol.* Lack of coloring-matter in the hair. [< A-, not, + CHROMO- + Gr. *thrix*, hair.]

a-chro'mous, *a.* Colorless. **ach'ro-ous‡.**

a-chron'ic, a-chron'i-cal, etc. See ACRONYCH, etc.

ach'ro-nism, 1 ak'ro-nizm; 2 ăc'ro-nĭşm, *n.* **1.** The absence of time; the state of timelessness. **2†.** Anachronism. [< Gr. *a-* priv. + *chronos*, time.]

ach'ro-o-. 1 ak'ro-ō-; 2 ăc'ro-ō-. Derived from Greek *achroos*, colorless: a combining form.— **ach"ro-o-dex'trin, ach"ro-o-dex'trine,** *n.* Dextrin that is not colorable by iodin.— **ach"ro-o-gly'co-gen,** *n.* A carbohydrate derived from snail-mucin when boiled with dilute alkalis or acids: when decomposed said to yield glucose.

Ach'sa, 1 ak'sə; 2 ăc'sa, *n. Bib. 1 Chron.* ii, 49. **Ach'sah‡.** *Josh.* xv, 16.

Ach'shaph, 1 ak'shaf; 2 ăc'shăf, *n. Bib. Josh.* xix, 25.

ach'ter, 1 ăh'tər; 2 ăn'ter, *adv.* [S.-Afr. D.] In the rear; behind. [commune in Friesland, Netherlands.

Acht"kar-spe'len, 1 ăkt'kär-spē'len; 2 ăct'kär-spę'lĕn, *n.* A

Ach-tyr'ka, *n.* See AKHTYRKA.

A'chu-as, 1 ā'chu-əz; 2 ā'chu-ăş, *n. pl.* [Afr.] A tribe of pigmies of the Belgian Kongo.

a-chu'la, 1 ə-shū'lə; 2 ä-chų'lä, *n.* [Pg.] A native dance in triple time, somewhat like the fandango.

a-chy'li-a, 1 ə-kai'li-ə; 2 a-cȳ'li-a, *n. Pathol.* Absence or defective formation of any juice, or of chyle. [< A-, not, + CHYLE.]

a-chy'lous, 1 ə-kai'lus; 2 a-cȳ'lŭs, *a. Pathol.* Destitute of or deficient in chyle.

a-chy'mi-a, 1 ə-kai'mi-ə; 2 a-cȳ'mi-a, *n. Pathol.* Insufficient formation of chyme. [< A-, not, + CHYME.]

a-chy'mous, 1 ə-kai'mus; 2 a-cȳ'mŭs, *a. Pathol.* Lacking in chyme.

Ach"y-ran'thes, 1 ak'i-ran'thiz; 2 ăc'y-răn'thēş, *n. Bot.* Same as IRESINE. [< Gr. *achyra*, chaff, + *anthos*, flower.]

Ach'zib, 1 ak'zib; 2 ăc'zĭb, *n. Bib. Josh.* xix, 29.

Ach'zi-ba, 1 ak'zi-bə; 2 ăc'zi-ba, *n. Bib.* (Douai).

A'ci, 1 ā'chi; 2 ā'chi, *n.* A seaport in eastern Sicily.

Ac"i-che-ly'i-dæ, 1 as'i-ki-lai'i-di; 2 ăc'i-ce-lȳ'i-dē, *n. pl. Herp.* A family of tortoises, *Eurysternidæ*. **A-cich'e-lys,** *n.* (t. g.) [< Gr. *akis*, point, + *chelys*, tortoise.]

—ac"i-chel'y-id, *n.*— **ac"i-chel'y-oid,** *a.*

a-cic'u-la, 1 ə-sik'yu-lə; 2 a-çĭc'yų-la, *n.* [-LÆ, 1 -lī; 2 -lē, *pl.*] [L.] **1.** A slender needle-like process; a bristle or prickle, as on a plant or animal; a body having the form of a needle, as some crystals. **ac'i-cl(eF‡; a-cic'u-lus‡. 2.** *Rom. Antiq.* A pin for a head-dress. **3.** [A-] *Conch.* A genus of minute turreted gastropods typical of *Aciculidæ*. **—a-cic'u-lar,** *a.* Needle-shaped; bristle-like, as some prisms. **a-cic'u-li-form‡; a-cic'u-line‡.— acicular bismuth,** same as AIKINITE.— **a-cic'u-lar-ly,** *adv.*— **a-cic'u-late, a-cic'u-lat"ed,** *a.* **1.** Acicular. **2.** Bearing or studded with aciculæ, as a leaf.— **Ac"i-cu'li-dæ,** *n. pl. Conch.* A family of operculate land-snails having a small turreted shell and a thickened peristome. **A-cic"u-la'ce-a‡.— a-cic'u-lid,** *n.*— **A-cic"u-li'na,** *n. pl. Spong.* A suborder of demospongians characterized by diactine megascleres. **A-cic"u-li'næ‡.— a-cic'u-loid,** *a.*— **a-cic'u-lite‡,** *n. Mineral.* Aikinite.

a-cic'u-lum, 1 a-sik'yu-lum; 2 a-çĭc'yų-lŭm, *n.* [-LA, *pl.*] *Helminth.* One of the sharp, style-like appendages whose parts project from each division of the parapodia of certain annelids. [Neut. of ACICULA.] **a-cic'u-lus‡.**

ac'id, 1 as'id; 2 ăc'id, *a.* **1.** Resembling vinegar in taste or effect; sharp and biting to the taste; sour.

Souls are made sweet not by taking the *acid* fluids out, but by putting something in—a great Love, a new Spirit, the Spirit of Christ. DRUMMOND *Greatest Thing* ch. 3, p. 35. [I. P. 1891.]

2. *Chem.* Of, pertaining to, yielding, or having the characteristics of an acid. **3.** Acidic. [< L. *acidus*, < *aceo*, be sour.]

Syn.: acerb, acetous, acidulated, acidulous, acrid, acrimonious, biting, bitter, caustic, cutting, harsh, pungent, sharp, sour, stinging, tart, vinegarish. *Acid, sour,* and *bitter* agree in being contrasted with *sweet*, but the two former are sharply distinguished from the latter. *Acid* or *sour* is the taste of vinegar or lemon-juice; *bitter* that of quassia, quinin, or strychnin. *Acrid* is nearly allied to *bitter*. *Pungent* suggests the effect of pepper or snuff on the organs of taste or smell; as, a *pungent* odor. *Caustic* indicates the corroding effect of some strong chemical, as nitrate of silver. In a figurative sense, as applied to language or character, these words are very closely allied. We say a *sour* face, *sharp* words, *bitter* complaints, *caustic* wit, *cutting* irony, *biting* sarcasm, a *stinging* taunt, *harsh* judgment, a *tart* reply. *Harsh* carries the idea of intentional and severe unkindness, *bitter* of a severity that arises from real or supposed ill treatment. The *bitter* speech springs from the sore heart. *Tart* and *sharp* utterances may not proceed from an intention to wound, but merely from a wit recklessly keen; *cutting, stinging,* and *biting* speech indicates more or less of hostile intent, the latter being the more deeply malicious. The *caustic* utterance is meant to burn, perhaps wholesomely, as in the satire of Juvenal or Cervantes. See MOROSE.— Ant.: dulcet, honeyed, luscious, nectared, saccharine, sweet.

—acid gloss, a polish containing acid used in stone-cutting to give a glossy appearance to the stone.— **a. green, a. magenta, a. yellow,** see under the nouns.— **a. humus** (*Bot.*), sour humus. See HUMUS.— **a. orange,** a dyestuff, orange II. See table under ORANGE¹, *n.*— **a. salt,** a salt in which only part of the displaceable hydrogen of the acid has been replaced by a metal or its equivalent.— **a. sodium carbonate,** same as SODA, 2 (3).

ac'id, *n.* **1.** Any sour substance. **2.** *Chem.* A compound of hydrogen in which all or a part of the hydrogen may be exchanged for a metal or a basic radical, forming a new compound. Acids are usually sour and soluble in water. They decompose most carbonates, with effervescence, and redden vegetable substances, as litmus. They generally contain oxygen united with another element that gives the name to the acid: thus, sulfuric acid (H_2SO_4) contains hydrogen, sulfur, and oxygen.

—ac'id-blast", *n. Engr.* A process of etching plates by spraying with acid at right angles to the surface.— **a.-cell,** *n.* One of the cells of the glands situated at the cardiac end of the stomach which secrete the acid of the gastric juice.— **a.-egg,** *n.* An egg-shaped tank for acids which are driven from it by compressed air, as in sulfuric-acid manufacture.— **a.-fast,** *a.* Not yielding readily to decolorization as by acids when stained: said of bacteria, epithelial tissue, etc.— **a.-gland,** *n.* **1.** *Physiol.* One of the glands situated in the wall of the stomach that secrete the acid of the gastric juice. **2.** *Entom.* A gland occurring in the *Pedipalpi*, or in stinging *Hymenoptera*, which secretes an acid fluid that, when combined with an alkaline fluid secreted by another gland, as in certain insects, makes the poison effective.— **a. of amber,** succinic acid.— **a.-proof,** *a.* That can not be changed by acids.— **Nordhausen a.,** fuming sulfuric acid. See SULFURIC.— **Scheele's a.,** a 5-per-cent. aqueous solution of absolute hydrocyanic acid.

Ac"i-dan-the'ra, 1 as'i-dan-thi'rə; 2 ăc'i-dăn-thē'ra, *n. Bot.* A genus of iridaceous tender perennials, natives of tropical and South Africa. There are about 20 species. *A. bicolor*, a greenhouse favorite, has fragrant creamy-white flowers splashed with purplish-brown.

Ac"i-das-pid'i-dæ, 1 as'i-das-pid'i-di; 2 ăc'i-dăs-pid'i-dē, *n. pl. Crust.* A Paleozoic family of trilobites with a secondary pair of axial furrows marking off a central portion of the glabella. **Ac"i-das'pis,** *n.* (t. g.) [< Gr. *akis*, point, + *aspis*, shield.] **Ac"i-das'pi-dæ‡.— ac"i-das'pi-did,** *n.*— **ac"i-das'pi-doid,** *a.*

ac"i-de'mi-a, 1 as'i-di'mi-ə; 2 ăc'i-dē'mi-a, *n. Pathol.* Acidity of the blood. [< ACID + Gr. *haima*, blood.] **ac"i-dæ'mi-a†.**

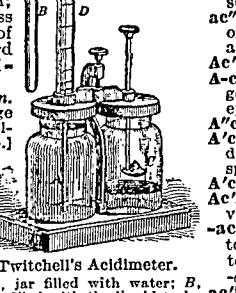
ac'id-er, 1 as'id-ər; 2 ăc'id-er, *n.* A device with which acid is applied to parts that are to be soldered.

a-cid'ic, 1 ə-sid'ik; 2 a-çĭd'ic, *a.* **1.** *Geol.* Containing a high percentage of silica: said of rocks: opposed to *basic*. **2.** Acid.

ac"i-dif'er-ous, 1 as'i-dif'ər-us; 2 ăç'i-dĭf'er-ŭs, *a.* Containing or capable of yielding an acid. [< ACID + L. *fero*, bear.]

a-cid'i-fy, 1 ə-sid'i-fai; 2 a-çĭd'i-fȳ, *v.* [-FIED; -FY'ING.] **I.** *t.* To render acid; change into acid. **II.** *i.* To become acid. [< ACID + -FY.]— **a-cid'i-fi"a-bl(eF,** *a.*— **a-cid'i-fi"ant,** *a.*— **ac"i-dif'ic,** *a.* Producing an acid or acidity; making acid.— **a-cid'i-fi-ca'tion,** *n.*— **a-cid'i-fi"er,** *n.* One who or that which acidifies; in chemistry, that which has the power of changing a substance into an acid, as chlorin or oxygen; an acetifier.

ac"i-dim'e-ter, 1 as'i-dim'i-tər; 2 ăç'i-dĭm'e-ter, *n.* Any apparatus for determining the strength of acids. [< ACID + Gr. *metron*, measure.] **ac"i-dom'e-ter‡.**



Twitchell's Acidimeter.

A, jar filled with water; *B*, tube filled with the liquid to be tested; *C*, jar containing the liquid to be tested, together with spoon filled with sodium bicarbonate; *D*, graduated tube, which indicates the amount of acid contained in the tested liquid.

ac"i-dim'e-try, 1 as'i-dim'i-tri; 2 ăç'i-dĭm'e-trȳ, *n.* The process of determining the strength of acids, as by the use of standard alkaline solutions.— **ac"i-di-met'ric, -ri-cal,** *a.*

ac'i-dite, 1 as'i-dait; 2 ăç'i-dīt, *n.* Any igneous rock having a large proportion of the acid radical silica: opposed to *basite*. [< ACID.]

a-cid'i-ty, 1 ə-sid'i-ti; 2 a-çĭd'i-ty, *n.* **1.** The state or quality of being acid. **2.** Degree of acid strength or sourness. **3.** The combining power of a base, as measured by the number of hydrogen atoms it can replace in an acid. [< L. *aciditas*, < *acidus*; see ACID.]

ac'id-ize or **-ise,** 1 as'id-aiz; 2 ăç'i-dīz, *vt.* [Rare.] To apply an acid to; acidify.

ac'id-ly, *adv.* In an acid manner; sourly.

ac'id-ness, *n.* Same as ACIDITY, 1 and 2.

ac"i-do'le-ous†, *a.* Oily and of an acid nature.

ac"i-doph'i-lous, 1 as'i-dof'i-lus; 2 ăç'i-dŏf'i-lŭs, *a. Biol.* That stains easily with acids. [< ACID + Gr. *philos*, loving.]

ac"i-do'sis, 1 as'i-dō'sis; 2 ăç'i-dō'sis, *n.* Faulty metabolism by which an excess of acid is produced in the system; acid intoxication.

ac"i-do-the'ca, 1 as'i-do-thi'kə; 2 ăç'i-do-thē'ca, *n.* [-CÆ, 1 -sē; 2 -çē, *pl.*] *Entom.* The pupal sheath of the ovipositor. [< ACID + Gr. *thēkē*, chest.]

a-cid'u-læ, 1 ə-sid'yu-lī; 2 a-çĭd'yu-lē, *n. pl.* [L.] Springs of cold acid mineral waters.

a-cid'u-late, 1 ə-sid'yu-lēt; 2 a-çĭd'yu-lāt, *vt.* [-LAT'ED; -LAT'ING.] **1.** To make somewhat acid; as, to *acidulate* a solution. **2.** To make sour in temper. [< *acidulate* a solution. **2.** To make sour in temper. [< *acidulus*, sourish, dim. of *acidus*; see ACID.]— **a-cid"u-la'tion,** *n.*

ac"i-dul'cist, *a.* Both sour and sweet.

a-cid'u-lous, 1 ə-sid'yu-lus; 2 a-çĭd'yu-lŭs, *a.* **1.** Slightly sour; slightly acid in reaction; subacid; as, *acidulous* springs. **2.** Sour-tempered. [< L. *actdulus*, < *acidus*; see ACID.] **a-cid'u-lent‡.**

Syn.: see ACID.— **acidulous water,** mineral water charged naturally with carbon dioxid.

ac'i-dyl, 1 as'i-dil; 2 ăç'i-dĭl, *n.* Same as ACYL.

ac'i-er-age, 1 as'i-ər-ij; 2 ăç'i-er-ăj, *n.* [F.] The process of electroplating a metal with iron or steel.

ac'i-er-ate, 1 as'i-ər-ēt; 2 ăç'i-er-āt, *vt.* [-AT'ED; -AT'ING.] To turn into steel. [< F. *acier*, steel, < LL. *aciarium*, < L. *acies*, edge.]— **ac"i-er-a'tion,** *n.*

a'ci-est, *n.* L.] Keen attention or aim, as of eye, ear, etc.

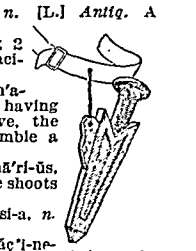
ac'i-form, 1 as'i-fōrm; 2 ăç'i-fôrm, *a.* Needle-shaped. [< L. *acus*, needle, + *forma*, shape.]

a-cil'i-ate, 1 ə-sil'i-ēt; 2 a-çil'i-āt, *a.* Destitute of cilia. [< A-, not, + CILIATE.] **a-cil'i-at"ed‡.**

ac"i-na'ceous, 1 as'i-nē'shus; 2 ăç'i-nā'shŭs, *a. Bot.* Full of or formed of small seeds or drupelets, as a grape or blackberry. Compare ACINUS. [< L. *acinus*, grape-stone.]

a-cin'a-ces, 1 ə-sin'ə-siz; 2 a-çĭn'a-çēş, *n.* [L.] *Antiq.* A short Medic and Persian sword.

a-cin"a-ci-fo'li-ous, 1 ə-sin"ə-si-fō'li-us; 2 a-çĭn'a-çi-fō'li-ŭs, *a. Bot.* Having acinaciform or simitar-shaped leaves.



Acinaces in Sheath.

a-cin'a-ci-form, 1 ə-sin'ə-si-fōrm; 2 a-çĭn'a-çi-fôrm (XIII), *a. Bot.* Simitar-shaped; having one edge thick and slightly concave, the other thin and convex, so as to resemble a simitar.

ac"i-na'ri-ous, 1 as'i-nē'ri-us; 2 ăç'i-nā'ri-ŭs, *a.* Having grape-like dilatations on the shoots or branches, as some algæ.

ac"i-ne'si-a, 1 as'i-ni'si-ə; 2 ăç'i-nē'si-a, *n.* Same as AKINESIA.— **ac"i-net'ic,** *a.*

Ac"i-ne-ta'ri-a, 1 as'i-ni-tē'ri-ə; 2 ăç'i-ne-tā'ri-a, *n. pl. Protoz.* A class of protozoans, including the tentaculiferous infusorians without vibratile processes. [< Gr. *akinētos*; see ACINETINA.]— **ac"i-ne-ta'ri-an,** *a.* & *n.*

Ac"i-ne-ti'na, 1 as'i-ni-tai'nə; 2 ăç'i-ne-tī'na, *n. pl. Protoz.* An order of infusorians with no mouth, but with tubular tentacles through which, by means of a knobbed sucker at the end, the food is drawn in; the *Suctoria*. [< Gr. *akinētos*, without motion, < *a-* priv. + *kineō*, set in motion.] **Ac"i-ne'tæ‡.— ac"i-ne'tan, ac"i-ne-ti'nan,** *a.* & *n.*— **Ac"i-net'i-dæ,** *n. pl. Protoz.* A family of infusorians coextensive with *Acinetina*. **Ac"i-ne'ta,** *n.* (t. g.)— **ac"i-ne'tid,** *a.* & *n.*— **ac"i-ne'told,** *a.*— **ac"i-net'i-form,** *a.*

a-cin'i-form, 1 ə-sin'i-fōrm; 2 a-çĭn'i-fôrm, *a.* **1.** (1) Of the shape of a cluster of grapes. (2) Composed of or full of kernels. (3) Like a grape. **2.** [Rare.] *Anat.* Of the color of a purple grape: said of a layer of pigment in the iris.

ac'i-nose, 1 as'i-nōs; 2 ăç'i-nōs, *a.* **1.** Like a cluster of grapes; composed of small racemose lobules or acini; consisting of minute granular concretions; as, *acinose* glands. **2.** Of or pertaining to acini. **ac'i-nous‡.**

ac"i-no-tu'bu-lar, 1 as'i-no-tiū'biu-lər; 2 ăç'i-no-tū'bū-lar, *a.* Possessing both acini and tubules, as some glands.

ac'i-nus, 1 as'i-nus; 2 ăç'i-nŭs, *n.* [-NI, 1 -nai; 2 -nī, *pl.*] [L.] **1.** *Bot.* (1) One of the drupelets of an aggregate baccate fruit, as a raspberry. (2) A grape-seed. (3)† A berry, as a grape, growing in bunches; a bunch of such berries. **2.** *Anat.* (1) The terminal division of the secreting portion of a racemose gland. See illus. under GLAND. (2) The smallest lobule of a gland, as of the liver. (3) One of the sac-like dilatations on the terminal air-passages of the lungs. **ac'in†; ac'ine†.**

The word *acinus*, which originally meant the seed of a berry, . . . has been so vaguely applied by anatomists, that it seems better to discard it altogether. QUAIN *Human Anatomy* p. 236.

-a'cious, 1 -ē'shus; 2 -ā'shŭs, *suffix.* Abounding in; characterized by; given to: used in the formation of adjectives from verbal stems to express intense or habitual exhibition of some characteristic, as in *capacious*. [< L. *-ax, -aci-*, + -OUS.]

Ac"i-pen'ser-es, 1 as'i-pen'sər-iz; 2 ăç'i-pĕn'ser-ēş, *n. pl. Ich.* The *Chondrostei*. **Ac"i-pen'ser-ol'de-i‡.**

Ac"i-pen-ser'i-dæ, 1 as'i-pen-sər'i-di; 2 ăç'i-pĕn-sĕr'i-dē, *n. pl. Ich.* A family of chondrosteous fishes having an elongate body with five rows of shields, and a projecting snout with four barbels in a transverse row in front of the small toothless mouth; sturgeons. **Ac"i-pen'ser,** *n.* (t. g.) [< L. *acipenser*, sturgeon.] **Ac"ci-pen-ser'i-dæ‡; Ac"i-pen-ser-ol'dæ‡.— ac"i-pen'ser-id,** *a.* & *n.*— **ac"i-pen'ser-oid,** *a.* & *n.*— **ac"i-pen'ser-ine,** *a.* & *n.*

ac"i-pen'ser-in, 1 as'i-pen'sər-in; 2 ăç'i-pĕn'ser-in, *n.* An organic compound or protamin occurring in the testicles of a sturgeon (*Acipenser stellatus*). **ac"ci-pen'ser-in‡.**

Ac'i-pha, 1 as'i-fə; 2 ăç'i-fa, *n. Bib.* (Apocrypha). *1 Esd.* v, 31.

A-cip'ri-on, 1 a-sip'ri-ən; 2 ā-çĭp'ri-ŏn, *n. Paleon.* A fossil genus of true lizards (*Lacertilia*) existing in the Miocene epoch. [Sicily. **A'ci Re-a'le‡.**

A"ci-re-a'le, 1 ā"chi-rē-ā'lē; 2 ā"chi-re-ā'lę, *n.* A town in **A'cis,** 1 ā'sis; 2 ā'çis, *n. Myth.* A Sicilian shepherd murdered by Polyphemus for love of Galatea; from his blood sprang the Sicilian river Acis. **A'kis‡** [Gr.]. [by Handel.

A'cis and Gal"a-te'a, 1 gal'ə-ti'ə; 2 găl'a-tē'a. A serenata

Ac'i-tho, 1 as'i-thō; 2 ăç'i-thō, *n. Bib.* (Apocrypha). *Judith* viii, 1.

-ac'i-ty, 1 -as'i-ti; 2 -aç'i-ty. A suffix added to adjectives to form abstract nouns expressing quality or state; as, *tenacity, pugnacity*, etc. [< L. *-acitas, -acitatem*, < *-ax, -acious*, + *-tas*, -TY².]

ac'i-ur"gy†, *n.* Practical surgery.

Ack'a-woi, 1 ak'ə-woi; 2 ăk'a-wŏi, *n.* A member of a warlike Caribbean tribe of British Guiana.

ac-kele'†, *vt.* To cool. **a-kele'†.** CHAUCER *C. L.* l. 1,076.

ack'er, 1 ak'ər; 2 ăk'er, *n.* **1.** [Dial., Eng.] A ripple, or a streak of ruffled water. **2†.** An eager or tide-bore. **3†.** Acre.

GEIKIE *Entering on Life, Companions* p. 64. [J. B. A. 1887.]

3. Any one, or all those collectively, with whom one is acquainted; as, he has a wide *acquaintance.* [In this sense with a plural, *acquaintances.*]

We fall on old *acquaintances* when we least expect them.
FROUDE *Historical Sketches, Norway Fjords* p. 91. [F. & W.]

[< OF. *acointance,* < *acointer;* see ACQUAINT, *v.*] **ac-quain′tan-cy‡.**

Syn.: association, companionship, experience, familiarity, fellowship, friendship, intimacy, knowledge. *Acquaintance* between persons supposes that each knows the other; we may know a public man by his writings or speeches, and by sight, but can not claim *acquaintance* unless he personally knows us. *Acquaintance* admits of many degrees, from a slight or passing to a familiar or intimate *acquaintance;* but *acquaintance* unmodified commonly signifies less than *familiarity* or *intimacy.* As regards persons, *familiarity* is becoming restricted to the undesirable sense, as in the proverb, "*Familiarity* breeds contempt"; hence, in personal relations, there may be pleasant *acquaintance* with little *companionship;* and conversely, much *companionship* with little *acquaintance,* as between busy clerks at adjoining desks. So there may be *association* in business without *intimacy* or *friendship. Friendship* includes *acquaintance* with some degree of *intimacy,* and ordinarily *companionship,* tho in a wider sense. *Intimacy,* which refers to mutual knowledge of thought and feeling, is now uniformly preferred. A strong friendship may exist between those who have never met, but know each other by word and deed. *Acquaintance* does not involve *friendship,* for one may be well acquainted with an enemy. *Fellowship* involves not merely *acquaintance* and *companionship,* but sympathy as well. There may be much *friendship* without much *fellowship,* as between those whose homes or pursuits are far apart. There may be pleasant *fellowship* which does not reach the fulness of *friendship.* See ATTACHMENT; FRIENDSHIP; LOVE. As regards studies, pursuits, etc., *acquaintance* is less than *familiarity,* which supposes minute *knowledge* of particulars, arising often from long *experience* or *association.* — Ant.: ignorance, ignoring, inexperience, unfamiliarity. — Prep.: acquaintance *with* a subject; *of* one person *with* another; *between* persons.

— **to be of acquaintance,** to be familiar or intimate.

act, 1 akt; 2 ăct, *v.* **I.** *t.* **1.** To perform on or as on the stage; simulate; ape; play; as, to *act* a part. **2.** To play the part of; take the character of; as, to *act* the fool. **3.** To carry out or fulfil (a purpose, command, or enterprise); do; as, "The unwilling heralds *act* their lord's commands." POPE *Iliad* bk. i, l. 426. **4†.** To actuate, incite, or move to action.

But even for some time after 'actuate' was introduced — as late, we see, as Pope — 'act' did often the work which 'actuate' alone does now. TRENCH *Select Glossary* p. 2. [K. P. & CO. 1890.]

II. *i.* **1.** To put forth power or make exertion; produce movement or effect; specif., in physics, to exert mechanical force, or produce some specified effect through an agent; as, "His poetry *acts* like an incantation." MACAULAY *Essays, Milton* p. 4. **2.** To conduct or behave; do; as, to *act* energetically. **3.** To perform or serve for performance on the stage. **4.** To be employed temporarily in some office or capacity; as, the aid *acts* for his general: usually with a preposition. [< L. *actus*, pp. of *agō*, lead.] — **act′a-bl(e)‡,** *a.*

— **to act on or upon. 1.** To order one's conduct in accordance with; as, to *act upon* a maxim. **2.** To exert an influence on; as, alcohol *acts on* the brain.— **to act up to,** to come up to (*some belief or ideal*) in practise; as, to *act up* to one's creed.

act, *n.* **1.** The exertion of power, bodily or mental; the exercise or manifestation of a power or property; the doing of something. (1) *Ethics.* Something done with intelligent purpose, and so implying moral responsibility: including thoughts, words, deeds, and wilful omissions (negative acts); as, man is responsible for his *acts*.

He [who does the truth] will . . . need no instruction as to outward and individual *acts*.
FARRAR *Early Days of Christianity* ch. 33, p. 524. [F. & W.]

(2) A momentary deed or exertion of power, or one completed once for all, as opposed to a continuous one; as, justification is an *act* of God's free grace. (3) The performance of a part of a play; as, Away then: our *act's* ended. **2.** The performance of a natural function or process; action; as, "in the *act*" signifies in the very process of doing.

For when my outward action doth demonstrate the native *act* and figure of my heart. SHAKESPEARE *Othello* act i, sc. 1.

3. The effect of the exertion of power; something done; a deed; as, God's mighty *acts* are manifest. (1) A deed as a reality or actuality, as opposed to mere possibility or intention; as, genuine love is not in profession, but in *act* and truth. (2) *A formal transaction of a legislative* or other deliberative body; a decree; enactment; as, an *act* of Parliament. (3) Something done intentionally by a person of sound mind; as, this is my *act* and deed. (4) A section of a drama; the largest division of a play or opera, forming an incident or deed *complete in itself*; as, the first *act of Hamlet*. (5) *Liturg.* A short prayer expressing a particular religious sentiment.

4. A record of deeds or things done. (1) A legislative enactment; as, he was reading an *act* of Congress. (2) *pl.* A record of *historical events*; as, the *Acts of the Apostles*. (3) The written thesis required of a candidate, by a university, for admission to a degree.

5. *Philos.* Reality, as opposed to mere possibility. In the Aristotelian philosophy, existence *in act* was opposed to potential existence. Thus the soul is the act (actualization, or entelechy) of the body. God is said to be *pure act*, or One in whom is no unrealized potentiality.

6†. An auto da fé.

Syn.: accomplishment, achievement, action, consummation, deed, doing, effect, execution, exercise, exertion, exploit, feat, motion, movement, operation, performance, proceeding, transaction, work. An *act* is strictly and originally something accomplished by an exercise of power, in which sense it is synonymous with *deed* or *effect*. *Action* is a *doing*. *Act* is therefore single, individual, momentary; *action* a complex of *acts*, or a process, state, or habit of exerting power. We say a virtuous *act*, but rather a virtuous course of *action*. We speak of the *action* of an acid upon a metal, not of its *act*. *Act* is used, also, for the simple *exertion* of power; as, an *act* of will. In this sense *act* does not necessarily imply an external *effect*, while *action* does. Morally, the *act* of murder is in the determination to kill; legally, the *act* is not complete without the striking of the fatal blow. *Act and deed* are both used for the thing done, but *act* refers to the power put forth, *deed* to the result accomplished; as, a voluntary *act*, a bad *deed*. In connection with other words *act* is more usually qualified by the use of another noun, *action* by an adjective preceding; we may say a kind *act*, tho oftener an *act* of kindness, but only a kind *action*, not an *action* of kindness. As between *act* and *deed*, *deed* is commonly used of great, notable, and impressive *acts*, as are *achievement*, *exploit*, and *feat*. "We live in *deeds* not years." BAILEY *Festus, Country Town* sc. 7. *Act* and *action* are both in contrast to all that is merely passive and receptive. The intensest *action* is easier than passive endurance. See EXERCISE; EXPLOIT; MOTION; TRANSACTION; WORK.— Ant.: cessation, deliberation, endurance, immobility, inaction, inactivity, inertia, passion (in philosophic sense), quiescence, quiet, repose, rest, suffering, suspension.

Zoöph.* A family of hexactinian actinarians without acontia and with a weak sphincter; the typical sea-anemones. **Ac''ti-ni'a-dæ‡; Ac-tin'ı-dæ‡.**— **ac'ti-nid, ac-tin'ı-id,** *n.*

ac-tin'ı-o-chrome, *n. Chem.* A red pigment derived from certain *Actinozoa.*— **Ac-tin''ı-o-mor'pha,** *n. pl. Zoöph.* A subclass of anthozoans including the *Actiniaria, Antipatharia,* and *Madreporaria.*

ac'tin-ism, 1 ak'tın-izm; 2 ăc'tin-ism, *n.* **1.** *Physics.* That property of radiant energy (luminous and non-luminous) which effects chemical changes; also, the production of chemical change by such action.

The effects of actinism are seen in many common occurrences, as in the fading or discoloration of carpets, clothing, etc., when exposed long to sunlight, and in the tanning of the skin by the same agent; but they are most conspicuous in the products of photography. See PHOTOGRAPHY. Actinism is most powerfully manifested by the rays of the sun, but it is present in other rays also, as the electric and magnesium lights.

2†. The radintion of heat or light; that branch of physics which treats of such radiation. [< Gr. *aktis* (*aktin-*), beam.]

Ac''ti-nis'ti-a, 1 ak''tı-nis'ti-ə; 2 ăc''ti-nis'ti-a, *n. pl. Ich.* An order of rhipidopterygian fishes without special basal bones to the dorsal and anal fins, including *Calacanthidæ.*— **ac''ti-nis'ti-an,** *a. & n.*— **ac''ti-nis'ti-ous,** *a.*

ac-tin'ı-um, 1 ak-tin'ı-um; 2 ăc-tin'i-ŭm, *n. Chem.* **1.** An element that turns dark in sunlight, said to have been discovered in 1880 by Phipson, in commercial zinc. **2.** A radioactive substance discovered in pitchblende by A. Debierne, of Paris, in 1898. [< Gr. *aktinos, aktis,* ray.] — **actinium rays,** Becquerel rays sent out by the substances produced during the disintegration of actinium.

Ac''ti-ni-zo'a, *n. pl. Zoöph.* The *Actinozoa.*— **ac''ti-ni-zo'an,** *a. & n.*— **ac''ti-no-bac''ıl-lo'sis,** *n.* [Arg. Rep.] *Med.* A bacillary disease of cattle resembling actinomycosis, but more deadly and contagious.— **ac-tin'o-blast,** *n. Spong.* A scleroblast.— **ac-tin'o-branch,** *n.* A gill-like vascular organ of some cœlenterates, as the *Anthozoa.*— **ac''ti-no-bran'chi-a,** *n.* Same as ACTINOBRANCH.— **ac''ti-no-carp,** *n.* A fruit with placentæ arranged in a radiate manner.— **ac''ti-no-car'pic, ac''ti-no-car'pous,** *a.*— **Ac''ti-no-ce-rat'i-dæ,** *n. pl. Conch.* A Paleozoic family of nautiloidean cephalopods with the shell nearly straight and the siphuncle composed of nummuline segments. **Ac''ti-noc'e-ras,** *n.* (t. g.) — **ac''ti-no-cer'a-tid,** *n.*— **ac''ti-no-cer'a-told,** *a.*— **ac''ti-no-chem'is-try,** *n.* That branch of science which treats of the action of light on chemical compounds.— **Ac''ti-no-chl'rı,** *n. pl. Ich.* An extinct suborder or order of teleost fishes having many bones connected directly with the procapula and supporting the pectoral fins. **Ac''ti-no-chel'rı‡.**— **ac''ti-no-chl'rous,** *a.*— **Ac''ti-no-crin'ı-dæ,** *n. pl. Echin.* A Paleozoic family of camarate crinoids with a monocyclic base, three basals, no subradials, and regular interradials. **Ac''ti-no-crl'nus,** *n.* (t. g.) — **ac''ti-no-crin'ıd,** *n.*— **ac''ti-no-crl'nite,** *n.*— **ac''ti-no-crl'noid,** *a. & n.*— **Ac-tin'o-don,** *n. Paleon.* A genus of fossil stegocephalian amphibians from the lower Permian of France.— **ac''ti-no-e-lec-tric'ı-ty,** *n.* Electricity generated in a body, as in rock-crystal, by direct head-radiation. — **ac-tin'o-gram,** *n.* The record of actinic action in the actinograph.

ac-tin'o-graph, 1 ak-tin'o-grəf; 2 ăc-tin'o-grăf, *n.* An instrument for graphically recording the chemical intensity of the sun's rays by their action upon the sensitized surface of a rotating cylinder. One form of the apparatus, called **Hurter and Driffield's actinograph,** is used to indicate length of photographic exposures.— **ac-tin''o-graph'ic,** *a.*— **ac''ti-nog'ra-phy,** *n.* Registration by an actinograph; also, the art or science of such registration.

ac'ti-noid, 1 ak'tı-noid; 2 ăc'ti-nŏid, *a.* Having the form of rays; radiate, as a starfish.— **Ac''ti-nol'da,** *n. pl. Zoöph.* The *Actinozoa.*— **Ac''ti-nol'de-a,** *n. pl.* Same as ACTINOZOA.

ac-tin'o-lite¹, 1 ak-tin'o-lait; 2 ăc-tin'o-lit, *n.* A bright-green or grayish-green variety of amphibole ($Ca(MgFe)_3Si_4O_{12}$): found often in long crystals.— **ac-tin''o-lit'ic,** *a.*

ac-tin'o-lite², *n.* An apparatus for concentrating the chemical rays of the spectrum, as in treating skin-diseases; trade name.

ac''ti-nol'o-gous, *a. Biol.* Pertaining to, or exhibiting actinology.— **ac-tin'o-log** or **-logue,** *n.* An actinologous part.— **ac''ti-nol'o-gy,** *n.* **1.** *Physics.* The science of the chemical action of light. **2.** *Biol.* The homological relation that exists between the successive segments, regions, or divisions of a part or organ of radiate animals. **3.** The scientific study of the *Actinozoa.*— **ac''ti-nol'o-gist,** *n.*— **ac-tin'o-lyte,** *n.* **1.** A substance noticeably changed by the action of light. **2.** A chemical compound which may be resolved into its constituents by the action of light.— **ac''tin-o-lyt'ic,** *a.*— **ac-tin'o-mere,** *n. Zoöph.* One of the radiating partitions of an actinozoan, as a coral-polyp.— **ac''ti-no-mer'ic,** *a.*— **Ac''ti-nom'e-ris,** *n. Bot.* A genus of perennial plants of the aster family, with yellow flowers.

ac''ti-nom'e-ter, 1 ak''tı-nem'ı-tər; 2 ăc''ti-nŏm'e-ter, *n.* **1.** An instrument for measuring the heat-intensity of the sun's rays; as, the **absolute actinometer** (for recording directly the amount of heat), **Roscoe's a.** (for measuring light-action), and **Violle's a.** (for measuring the heating power of sunlight).

2. An instrument for ascertaining the actinic effect of light-rays; as, **Stanley's a.** (for determining the actinic effect of sunlight).

3. An instrument for determining the power of radiation by its chemical effects on gases, acids, etc.; as, **Draper's a.** (for gaging light-energy), and **Richardson's a.** (for recording the strength of chemically energetic rays).

ac''ti-nom'e-try, *n.* **1.** The measurement (1) of the intensity of solar heat, or (2) of the actinic effect of light-rays. **2.** The branch of science that treats of such measurement. — **ac''ti-no-met'ric, ac''ti-no-met'rı-cal,** *a.*

ac''ti-no-mor'phic, ac''ti-no-mor'phous, *a. Bot.* Regularly ray-shaped: said of flowers that may be divided into similar halves in two or more vertical planes.— **Ac''ti-no-my'ces,** *n.* A genus of chlamydobacteriaceous bacteria. *Actinomyces bovis* grows in the tissues of animals and men, forming tumors. By some authorities referred to *Cladothrix.*— **ac''ti-no-my-cet'ic,** *a.*— **ac''ti-no-my-co'sis,** *n.* The disease caused by *Actinomyces bovis,* characterized by sarcoma-like tumors, usually on the jaw, sometimes on the tongue and lungs, in cattle, pigs, horses, sheep, and occasionally in man; big-jaw; lumpy-jaw.— **ac''ti-no-my-cot'ic,** *a.* Relating to, partaking of, or affected by actinomycosis.— **ac-tin'o-phone,** *n.* An instrument for the production of sounds by the action of the actinic rays of the spectrum.— **ac-tin''o-phon'ic,** *a.*— **ac-tin'o-phore,** *n. Ich.* One of the peripheral elements of the skeleton, which afford support to the true fin-rays of a fish. J. A. RYDER *Am. Naturalist* vol. xix, p. 316.— **ac''ti-noph'o-rous,** *a.* Bearing radiating spines.— **ac-tin'o-phryd,** *a.* Of or like *Actinophrys.* **ac''ti-noph'ry-an‡.**— **Ac''ti-no-phry'ı-dæ,** *n. pl. Protoz.* A family of heliozoans. **Ac''ti-noph'rys,** *n.* (t. g.) **Ac''ti-noph''ry-ı'næ‡.**— **ac''ti-noph'ry-id,** *n.* — **ac''ti-noph'ry-oid,** *a.*— **Ac''ti-nop'o-da,** *n. pl. Echin.* The chief division (or order) of holothurians, with tentacles developed from the radial vessels of the water-vascular system.— **Ac''ti-nop'te-ri,** *n. pl. Ich.* The *Actinopterygia.*— **ac''ti-nop'ter-an,** *n.* — **ac''ti-nop'ter-ous,** *a.*— **Ac''ti-nop''ter-yg'ı-a,** *n. pl. Ich.* A subclass of fishes with interspinal bones not corresponding to fin-rays, including most living species.— **ac''ti-nop''ter-yg'ı-an,** *a. & n.*— **ac''ti-no-so'ma,** *n.* The whole body of an actinozoan, whether simple or composite. **ac-tin'o-some‡.**— **ac'ti-nost,** *n. Ich.* One of a row of bones (generally four) at the base of the pectoral fin in true fishes.— **ac-tin'o-stome,** *n.* The oral aperture, or mouth, of an actinozoan.— **ac''ti-no-sto'mi-al,** *a.*— **ac'ti-note,** *n. Mineral.* Same as ACTINOLITE¹.— **ac''ti-no-ther'a-peu'tic,** *a.* Of or relating to curative treatment by means of actinic rays.— **ac''ti-no-ther'a-py,** *n.* Same as RADIOTHERAPY.— **ac''ti-no-trich'i-um,** *n.* [-I-A, *pl.*] *Ich.* One of the fibers in the fin-fold of the embryo of a fish, representing in part the rays of the adult.— **ac''ti-not'ro-cha,** *n. Helminth.* The larva of certain worms (genus *Phoronis*) with rings of cilia round the anus and behind the mouth, those of the latter produced into numerous arm-like processes.— **ac''ti-no-trop'ic,** *a. Biol.* Reacting to ultra-violet light.— **Ac''ti-no-zo'a,** *n. pl. Zool.* A division of cœlenterates, variously ranked, embracing the *Anthozoa* (as sea-anemones and coral-polyps) and the *Ctenophora.*— **ac''ti-no-zo'al,** *a.*— **ac''ti-no-zo'an,** *a. & n.*— **ac''ti-no-zo'on,** *n.*— **ac-tin'u-la,** *n.* [-LÆ, *pl.*] *Zoöph.* A locomotive polyp-like embryo into which the egg becomes directly developed in certain hydroids.

ac'ti-o, 1 ak'shı-o; 2 ăc'shi-ō, *n.* [L.] An action; specif., in civil law, (1) a right enforceable by law, or (2) a judicial proceeding for the enforcement of a right.— **actio personalis moritur cum persona** [L.] (*Law*), a personal action dies with the person

ac'tion, 1 ak'shən; 2 ăc'shon, *tr.* [Rare.] To bring an action at law against. **ac'tion-ize‡.**

ac'tion, *n.* **1.** The putting forth or exerting of power; an acting, doing, or working; operation; activity; as, a man of *action;* "Undulating lines . . . are expressive of *action.*" RUSKIN *Mod. Paint.* vol. v, ch. 2, p. 175. (1) (*a*) Intelligent and voluntary exertion: opposed to suffering or being acted upon; also, the exertion of mental power, as distinguished from physical; the moving of any faculty; as, strictly speaking, *action* is predicable of rational beings only; "Ever ready to teach that *action* was the truth of thought." LOWELL *Ode* st. 1.

Talent, lying in the understanding, is often inherited; genius, being the *action* of reason and imagination, rarely or never. COLERIDGE *Table Talk* May 21, 1830.

(*b*) *Psychol.* Physical motion as known to consciousness in inception, performance, and recollection: sometimes denominated *external* as distinguished from *internal voluntary* action, in which volition results in mental change without external manifestation. (2) The exertion of physical or chemical force; as, glacial *action* caused these scratches; the *action* of an acid. **2.** The manner or mode of the exertion of power. (1) *Physiol.* The performance by any organ of its proper function; as, the *action* of the heart was normal. (2) The movement of the parts or mechanism of something; as, the *action* of the engine was perfect. (3) *Oratory.* A speaker's entire mode of handling himself oratorically; gesture; as, Demosthenes pronounced *action* the sum of eloquence.

The elder Edwards had no *action* at all; yet such was his interest in his subject that crowded auditors burst into one universal weeping under his discourse.

G. SPRING *Power of the Pulpit* ch. 13, p. 257. [B. & S. 1848.]

3. The result of putting forth power; the thing done. Particularly: (1) Any act of volition; deed; as, the rational *actions* of men constitute their conduct or behavior. (2) In poetry and the drama, the connected events on which the interest depends. (3) A military conflict; battle; as, a general *action.* (4) *Eccl.* A devotional exercise or religious function. (5) *Law.* The lawful demand of one's right through judicial proceedings; a judicial proceeding for the enforcement of rights, the redress of wrongs, or the punishment of public offenses. (6) [Archaic.] A share in a stock company. (7) An enactment or edict of a deliberative body or court. **4.** The mechanism by means of which power is exerted. (1) In a machine; as, single *action* (that by which effective work is done in only one direction during a stroke) and double *action* (in which effective work is done on both the forward and the return stroke). (2) (*a*) In musical instruments, the mechanism that connects keys or pedals with strings or pipes. (*b*) In a pianoforte or organ, the amount of resistance offered by the keys to the touch; as, hard or heavy *action;* also, the amount of depression possible to the keys; as, shallow *action.* (3) The appliance by which the breech of a cannon is opened. (4) *Sculp. & Paint.* Gesture or attitude represented as expressing passion or sentiment. [F., < L. *actio*(*n-*), < *ago,* do.] SYN.: see ACT; BATTLE; BEHAVIOR; CASE; EXERCISE; OPERATION.

— **action at a distance** (*Physics*), action whereby one material object affects another which it does not touch, as in gravitation or magnetic attraction or repulsion: supposed to be due to stresses in the ether between the bodies. — **ac'tion-cen''ter,** *n. Meteor.* Center of action. See under CENTER.— **a. current,** see under CURRENT, *n.*— **a. ex contractu,** a legal action founded on matters appertaining to a contract.— **a. ex delicto,** an action arising from a wrong done.— **a. of a moving system** (*Physics*), the sum of the average momenta of the parts, each multiplied by the length of its path.— **a.-rail,** *n.* Either of two rails extending across a pianoforte and supporting its action. — **a. sermon,** the sermon before communion in Scotch Presbyterian churches.— **a.-taking,** *a.* Litigious.— **a.-time,** *n. Psychol.* The reaction-period.— **back-a.,** *n.* See BACK.— **direct a.,** an arrangement in a steam-engine in which the connecting-rod is attached to a cross-head between the cylinder and crank-shaft, or to the crank-pin direct.— **grand a.,** a pianoforte-action having a hammer to strike the string, a hopper to raise the hammer from the string after striking, and a check to keep the hammer from rebounding.— **instinctive a.** (*Psychol.*), an action fundamentally instinctive, but modified by the conscious motives of experience.— **law of a. and reaction,** the law that for every action of force on a body there is an equal and opposite action (reaction) on the body that exerts the force. See FORCE.— **local a. 1.** Irregular and wasteful dissolving of the positive element of a voltaic battery even when the circuit is open. **2.** Wasteful currents in the pole-pieces or cores of dynamos; eddy, Foucault, local, or parasitic currents.— **magnocrystallic a.,** the differences in the action of magnets on crystalline bodies in different directions: a term proposed by Faraday.— **mixed a.,** an action partaking of the nature of both real and personal actions, wherein real estate is demanded and also personal damages for a wrong sustained in relation thereto, as waste, etc.— **organic a.,** a vital process in the bodily organization, as the action of the liver, of the heart, etc.— **personal a.,** an action brought for recovery on some form of contract, or for damages for some personal injury either direct or consequential.— **pneumatic a.,** an action, as in organs, by which the actual work of opening the valves, etc., is done pneumatically, the pressed key only controlling and directing the pneumatic power.— **principle of least a.,** the law that of several ways in which a system of bodies may move without gaining or losing energy, it will choose that in which the action is least. See ACTION OF A MOVING SYSTEM, above.— **psychomotor a.** (*Psychol.*), action resulting directly from an idea or perception.— **real a.,** a judicial proceeding between private persons relating to the recovery of lands, tenements, or hereditaments, claimed in fee or for life.— **repeating a.,** in a pianoforte or organ, a mechanism which permits the striking of keys a second time before the return to normal position: applied also to the action of a pedal.— **selective a.** (*Psychol.*), an action arising from conflicting impulses or motives.— **statutory a.,** an action created by statute.— **tracker a.,** in organs, action controlled by trackers connecting the mechanism.

—**ac'tion-a-bl(e**ᴿ, *a. Law.* Affording cause for instituting an action, as trespass, slanderous words, etc.—**ac'tion-a-bly,** *adv.*—**ac'tion-al,** *a.* [Rare.] Of or pertaining to action.—**ac'tion-a-ry,** *n.* [-RIES, *pl.*] [Rare.] An owner of actions or shares in a joint-stock company; a stockholder—**ac'tion-er,** *n.* One who makes or adjusts the action of an instrument or apparatus, as of a piano, lock, etc.—**ac'tion-ist,** *n.* **1.** [Rare.] One who advocates or practises action in oratory. **2†.** A stockholder.—**ac'tion-ize,** *vt.* [Rare.] To bring a legal action against.—**ac'tion-less,** *a.* Without action; specif., in law, insufficient to afford a good cause for action.—**ac'tious†,** *a.* Eager for action; active.

ac"ti-ta'tion, 1 ak"ti-tē'shŏn; 2 ăc"ti-tā'shon, *n.* [Rare.] Quick and frequent action. [< L. *actitatus,* pp of *actito,* freq. of *ago,* act.]

ac'ti-um¹, 1 ak'shi-ŭm; 2 ăc'shi-ūm, *n. Ecol.* A rocky seashore (opp. to *limnium*).

Ac'ti-um², 1 ak'shi-ŭm; 2 ăc'shi-ūm, *n.* An ancient Grecian promontory; Augustus Cæsar defeated Antony here, 31 B.C.

ac'ti-vate, 1 ak'ti-vēt; 2 ăc'ti-vāt, *vt.* [-VAT'ED; -VAT'ING.] **1.** *Physics.* To render radioactive, as a gas, by subjecting to the action of a radioactive substance; ionize. **2.** *Chem.* To render capable of adsorption. **3.** To make active.

ac'ti-va"tor, 1 ak'ti-vē'tor; 2 ăc'ti-vā"tŏr, *n.* A substance that renders active a ferment that is secreted in an inactive form.

ac'tive, } 1 ak'tiv; 2 ăc'tiv, *a.* **1.** Abounding in, exhibit-
ac'tivs, } ing, or expressing action, as opposed to lacking in action, or sluggish. (1) Agile; quick; as, *active* as a squirrel. (2) Full of activity; busy; as, an *active* man.

We are *active* beings, and our sympathy . . . is with great action. DISRAELI *Contarini Fleming* pt. ii, ch. 9, p. 141. [T. 1846.]

(3) Brisk; lively; as, an *active* demand for wheat. (4) *Gram.* Expressing the action of verbs, as distinguished from being and state; also, as opposed to passivity.

Verb-forms to which *active* is so applied are said to belong to the *active* (opposed to the *passive*) voice. By some grammarians *active* is used in the sense of transitive. **2.** Being in or pertaining to a state of action: opposed to *quiescent, extinct,* or *latent;* as, an *active* volcano; kinetic energy is *active,* not latent. **3.** Having the property of causing or promoting action: opposed to *passive.* (1) Originating or producing action.

In our instinctive rebellion against pain we are children again, and demand an *active* will to wreak our vengeance on.

GEORGE ELIOT *Adam Bede* ch. 27, p. 271. [B. C. & CO. 1886.]

(2) Inciting to or manifested in action: opposed to *contemplative* or *speculative;* as, an *active* Christianity. (3) Tending to action; practical, as opposed to theoretical; as, Reid divided the mental powers into intellectual and *active.* [ME. *actif,* < F. *actif,* < L. *activus,* < *ago,* act.]

Syn.: agile, alert, brisk, bustling, busy, diligent, energetic, expeditious, industrious, lively, mobile, nimble, officious, prompt, quick, ready, restless, sprightly, spry, supple, vigorous, wide-awake. *Active* refers to both quickness and constancy of action; in the former sense it is allied with *agile, alert, brisk,* etc.; in the latter, with *busy, diligent, industrious.* The *active* love employment, the *busy* are actually employed, the *diligent* and the *industrious* are habitually *busy.* The *restless* are *active* from inability to keep quiet; their activity may be without purpose, or out of all proportion to the purpose contemplated. The *officious* are undesirably *active* in the affairs of others. See ALERT; ALIVE; MEDDLESOME.—**Ant.:** dull, heavy, idle, inactive, indolent, inert, lazy, quiescent, quiet, slow, sluggish, stupid.—**Prep.:** active *in* work, *in* a cause; *for* an object, as *for* justice; *with* persons or instrumentalities; *about* something, as *about* other people's business.

—**ac'tiv(e-ly,** *adv.*—**ac'tiv(e-ness**ᴿ, *n.*

ac'ti-vism, *n. Philos.* A doctrine held by Christian Rudolph Eucken that life is action and human duty lies in a world of strife.

ac-tiv'i-tal, 1 ak-tiv'i-tăl; 2 ăc-tiv'i-tal, *a.* Of or pertaining to human activities; including all human actions of every kind.

ac-tiv'i-ty, 1 ak-tiv'i-ti; 2 ăc-tiv'i-ty, *n.* [-TIES, 1 -tiz; 2 -tiş, *pl.*] **1.** The state or quality of being active; exertion of energy; action. **2.** Brisk or vigorous movement or action; hence, active force or operation in general; as, *activity* in trade; *activity* of a volcano; human *activities.* **3.** *Mech.* Work done in a unit of time. **4.** *Chem.* The ability, as of a carbon, to remove coloring matter or impurity from a liquid. **5†.** Bodily exercise; athletics. [< F. *activité,* < LL. *activita(t-)s,* < L. *activus;* see ACTIVE.] Syn.: see ANIMATION. [tive.

act'less, 1 akt'les; 2 ăct'lĕs, *a.* Without action; inac-

ac'to, 1 ak'to; 2 ăc'to, *n. Sp.-Am. Law.* An action; especially, a judicial proceeding or decree.

ac'tol, 1 ak'tōl *or* -tol; 2 ăc'tōl *or* -tŏl, *n. Chem.* An antiseptic ($AgC_3H_3O_3H_2O$) employed in dentistry, veterinary medicine, and surgery; silver lactate. [Coined < LACTATE.]

ac'ton¹, 1 ak'tŏn; 2 ăc'ton, *n.* A quilted tunic worn under medieval armor to prevent chafing; also, a cuirass of plate armor. [< OF. *acoton,* F. *hoqueton,* < Sp. *alcoton,* < Ar. *al-qŭtun,* < *al,* the, + *qŭtun,* cotton.]

ak'e-ton†; hack'e-ton†.

Ac'ton², *n.* **1. Eliza** (⁴/₁₂1799–²/₁₂1859), an English authoress; *Modern Cookery.* **2. John Emerich Edward Dalberg-Acton, Lord** (1834–⁶/₁₂1902) (first baron), an English historian. **3.** A town in Middlesex, England; suburb of London. **4.** A town in Middlesex county, Mass.

ac'tor, 1 ak'tor; 2 ăc'tŏr, *n.* **1.** One who acts or plays a part; specif., one who represents a character, plays a part, or enacts a rôle, as in a theater; a stage-player; one whose business is acting. **2.** Any doer of an act. **3.** *Law.* (1) The plaintiff. (2) An advocate or a proctor. [L., < *ago,* drive.] [AGENT; CAUSE.

Syn.: comedian, performer, player, tragedian. See

ac'tress, 1 ak'tres; 2 ăc'trĕs, *n.* A woman or girl who acts or performs, especially on the stage. [< ACTOR.]

ac"tu-a-bil'i-ty, 1 ak"chu-a-bil'i-ti; 2 ăc"chu-a-bil'i-ty, *n.* [Rare.] Capacity for being actuated or acted upon. [M.]

ac'tu-al, 1 ak'chu-[*or* -tiu-]ăl; 2 ăc'chu-[*or* -tū-]al, *a.* **1.** Real in being or act; carried out or realized in practise; existing in fact, as opposed to merely possible, constructive, conceivable, or ideal; as, *actual* cost.

To the heart of Faith hopes are as *actual* as realities. FARRAR *Early Days of Christianity* bk. iii, ch. 18, p. 249. [T. & W.]

2. *Law.* Existing in fact; real, as distinguished from conjectural or imputed by construction; as, *actual* possession. **3.** Being in existence or action now; existent; present.

If there was any trouble, *actual* or impending, affecting those she had served, her place was with them.

TOURGÉE *Bricks without Straw* ch. 42, p. 323. [F. H. & H. 1880.]

4†. Active, or involving action or results; practical. [< F. *actuel,* < LL. *actualis,* practical, < L. *actus;* see ACT, *v.*]

Syn.: authentic, certain, demonstrable, developed, genuine, positive, real, true, unquestionable, veritable. *Actual* has respect to a thing done or accomplished, *real* to a thing as existing, *positive* to that which is fixed or established, *developed* to that which has reached completion by a natural process of unfolding. *Actual* is in opposition to the supposed, conceived, or reported, and furnishes the proof of its existence in itself; *real* is opposed to feigned, imaginary, and is capable of demonstration; *positive,* to the uncertain or doubtful; *developed,* to that which is undeveloped or incomplete. The *developed* is susceptible of proof; the *positive* precludes the necessity for proof. The present condition of a thing is its *actual* condition; ills are *real* that have a substantial reason; proofs are *positive* when they give the mind certainty; a plant is *developed* when it has reached its completed stage. See AUTHENTIC.—**Ant.:** fabulous, feigned, fictitious, hypothetical, imaginary, supposititious, theoretical, unreal, untrue, visionary.

—**ac'tu-al-ism,** *n. Metaph.* The doctrine that "all existence is truly active or spiritual, as opposed to inert or dead." J. HINTON *Philosophy and Religion* pref., p. 13. [K. P. & CO. 1881.]—**ac'tu-al-ist,** *n.* **1.** One who deals with realities or facts, as opposed to theories or fancies. **2.** An adherent of actualism.—**ac"tu-al-is'tic,** *a.*

ac'tu-al, *n.* **1.** Something real or actually existing; as, the *actual* is the real, as opposed to the merely possible. **2.** *pl.* Specif., in finance, actual assets or receipts, as distinct from supposed or estimated.

ac"tu-al'i-ty, 1 ak"chu-[*or* -tiu-]al'i-ti; 2 ăc"chu-[*or* -tū-]ăl'i-ty, *n.* [-TIES, 1 -tiz; 2 -tiş, *pl.*] **1.** The state of being actual, or real; as, the *actuality* of miracles. **2.** That which is actual; any reality; as, war is a dreadful *actuality.* **3.** Realism, as in art, or any instance of it. **4.** *Philos.* (1) In the Scholastic philosophy, the formal essence of an existent thing. (2) In the Hegelian philosophy, a more complete independence, or self-sufficiency, than belongs to phenomenal existence. [< LL. *actualita(t-)s,* < *actualis;* see ACTUAL.]—**actuality theory,** see under THEORY.

ac'tu-ate, 1 ak'chu-[*or* -tiu-]ēt; 2 ăc'chu-[*or* -tū-]āt, *v.* [-AT'ED; -AT'ING.] **I.** *t.* **1.** To move or incite to action; influence, as by motives; impel; as, the spirit that *actuates* a man. **2†.** To perform; make actual. **3†.** To quicken; rouse.

II. *i.* To act. [< LL. *actuatus,* pp. of *actuo,* < L. *actus;* see ACT, *v.*]

Syn.: compel, dispose, draw, drive, excite, impel, incite, incline, induce, influence, lead, move, persuade, prompt, stir, urge. *Actuate* refers solely to motives or influences from within. No one can directly *actuate* another; but one may be *actuated* to cruelty by hatred which another's misrepresentation has aroused. *Prompt* and *stir* are words of mere suggestion toward some course of action; *dispose, draw, incline, influence,* and *lead* refer to the use of mild means to awaken in another a purpose or disposition to act. To *excite* is to arouse one from lethargy or indifference to action. *Incite* and *instigate,* to spur or goad one to action, differ in the fact that *incite* may be to good, while *instigate* is always to evil. (See ABET.) To *urge* and *impel* signify to produce strong excitation toward some act. We are *urged* from without, *impelled* from within. *Drive* and *compel* imply irresistible influence accomplishing its object. One may be *driven* either by his own passions or by external force or urgency; one is *compelled* only by some external power; as, he was *compelled* by misfortunes to sell his estate.—**Ant.:** deter, discourage, dissuade, hinder, impede, inhibit, prevent, restrain, retard — **Prep.:** actuated *to* crime *by* revenge.

ac'tu-ate†, *a.* Actuated; realized in fact.

ac"tu-a'tion, 1 ak'chu-[*or* -tiu-]ē'shŏn; 2 ac"chu-[*or* -tū-]ā'shon, *n.* A putting in action; moving; effectual operation; as, creation is due to *actuation* of God's will.

ac'tu-a"tor, 1 ak'chu-[*or* -tiu-]ē"tor; 2 ac'chu-[*or* -tū-]ā"tŏr, *n.* One who or that which actuates; efficient cause; a motive.

ac'tu-ose†, *a.* Full of active power.

ac"tu-os'i-ty, 1 ak"chu-[*or* -tiu-]os'i-ti; 2 ăc"chu-[*or* -tū-]ŏs'i-ty, *n.* [-TIES, 1 -tiz; 2 -tiş, *pl.*] **1.** *Metaph.* An activity considered as complete in itself, or in which the action and completion coincide, as to think, to see. **2†.** The power to act; energy. [< L. *actuosus,* active, < *actus;* see ACT, *v.*]

ac'ture†, *n.* Action.

ac-tu'ri-ence, 1 ak-tiū'ri-ens; 2 ăc-tū'ri-ĕnç, *n.* [Rare.] The inward impulse or desire for action. [< L. *actus,* pp. of *ago,* act.] [public highway.

ac'tus¹, 1 ak'tus; 2 ăc'tŭs, *n.* [AC'TUS, *pl.*] [L.] *Law.* A

ac'tus², *n.* Action or act; the exertion of force, physical or mental, as distinguished from the force itself; the exercise or manifestation of a property, as distinguished from the property itself; actuality, as distinguished from potentiality.

The term *actus* was used in the discussions of the scholastics, as shaped by the teachings of Aristotle. *Matter* or substance, *form,* and *motion* were included by Aristotle in the sphere of existence *Matter,* in which form inheres, exists as possibility or capacity (Gr. *dynamis,* L. *potentia*). *Form* is the actualization, the realization (Gr. *entelecheia,* L. *actus*), the evolution, or entelechy of this possibility. *Motion* or change (Gr. *kinēsis*) is the passage of potentiality into reality. Anything, as, *e. g.,* explosive powder, is *in actu* when its energy, or possibility of action, let loose by an electric spark, becomes realized activity, to distinguish it from its condition *in potentia,* or as unrealized possibility of action. A similar distinction in modern physics results in the two recognized forms of *energy, potential* and *kinetic.* When a ton-weight is suspended in mid-air, its energy is *in potentia,* or potential; when let loose it becomes kinetic. See ENERGY. See KRAUTH-FLEMING *Vocabulary of the Philosophical Sciences;* UEBERWEG *Hist. of Philos.* vol. i, p. 157. [L., < *ago,* act.]

—**actus primus,** the first act or primal energy; the essential energy of a thing, considered apart from its manifestations in action; that which makes a thing what it is in itself; in the scholastic philosophy, *est rei esse,* or *actus quidditativus.*—**a. purus,** the absolute or unrelated energy; the actual moving cause, lying back of matter and motion; "a *tertium quid* [or third something] which is always imparting motion, but is itself unmoved; the absolute. This *tertium* is God, the immaterial and eternal Form, the pure Actuality in which is no potentiality, the self-thinking Reason or absolute Spirit." UEBERWEG *Hist. of Philos.* vol. i, p. 158.—**a. secundus,** the secondary act or manifested energy: the exercise or manifestation of that energy, as distinguished from the first act; that which makes a thing what it is in its form or manifestations; in the scholastic philosophy, *est rei operari,* or *actus entitativus.*

a-cu'men, 1 ə-kiū'men; 2 a-cū'mĕn, *n.* **1.** Quickness of intellectual discernment; keenness of discrimination; as, the critic and the metaphysician require unusual *acumen.* **2.** *Bot.* A sharply tapering point. [L., point, < *acuo,* sharpen.]

Syn.: acuteness, cleverness, discernment, insight, keenness, penetration, perspicacity, sagacity, sharpness, shrewdness. *Sharpness, acuteness,* and *insight,* however keen, and *penetration,* however deep, fall short of the meaning of *acumen,* which implies also ability to use these qualities to advantage. There are persons of keen *insight* and great *penetration* to whom these powers are practically useless. *Acumen* is *sharpness* to some purpose, and belongs to a mind that is comprehensive as well as keen. *Cleverness* is a practical aptitude for study or learning. *Insight* and *discernment* are applied oftenest to the judgment of character; *penetration* and *perspicacity* to other subjects of knowledge. *Sagacity* is an uncultured skill in using quick perceptions for a desired end, generally in practical affairs; *acumen* may increase with study, and applies to the most erudite matters. *Shrewdness* is *keenness* or *sagacity,* often with a somewhat evil bias, as ready to take advantage of duller intellects. *Perspicacity* is the power to see clearly through that which is difficult or involved. We speak of the *acuteness* of an observer or a reasoner, the *insight* and *discernment* of a student, a clergyman, or a merchant, the *sagacity* of a hound, the *keenness* of a debater, the *shrewdness* of a usurer, the *penetration, perspicacity,* and *acumen* of a philosopher.—**Ant.:** bluntness, dulness, obtuseness, stupidity.

Syn.: aphorism, apothem, axiom, byword, dictum, maxim, motto, precept, proverb, saw, saying, truism. An *aphorism* partakes of the character of a definition; it is a summary statement of what the author sees and believes to be true. An *apothem* is a terse statement of what is plain or easily proved. *Aphorism* is philosophical, *apothem* practical. A *dictum* is a statement of some person or school, on whom it depends for authority; as, a *dictum* of Aristotle. A *saying* is impersonal, current among the common people, deriving its authority from its manifest truth or good sense; as, it is an old *saying,* "the more haste, the worse speed." A *saw* is a saying that is old, but somewhat worn and tiresome. *Precept* is a command to duty; *motto* or *maxim* is a brief statement of cherished truth, the *maxim* being more uniformly and directly practical; "God is love" is a *motto;* "fear God and fear naught," a *maxim.* The *precepts* of the Sermon on the Mount will furnish the Christian with invaluable *maxims* or *mottoes.* A *byword* is a phrase or saying used reproachfully or contemptuously. The *proverb* or *adage* gives homely truth in condensed, practical form, the *adage* often pictorial. "Hope deferred maketh the heart sick" is a *proverb;* "the cat loves fish, but dares not wet her feet," is an *adage.* Both the *proverb* and the *adage,* but especially the latter, are thought of as ancient and widely known. See AXIOM.

Syn.: (**addicted**) abandoned, accustomed, attached, devoted, disposed, given, given over, given up, habituated, inclined, prone, wedded. A man may be *accustomed* to labor, *attached* to his profession, *devoted* to his religion, *given* to study or to gluttony (in the bad sense, *given over*, or *given up*, is a stronger and more hopeless expression, as is *abandoned*). One *inclined* to luxury may become *habituated* to poverty. One is *wedded* to that which has become a second nature; as, one is *wedded* to science or to art. *Prone* is used only in a bad sense, and generally of natural tendencies; as, our hearts are *prone* to evil. *Abandoned* tells of the acquired viciousness of one who has given himself up to wickedness. One is *addicted* to that which he has allowed to gain a strong, habitual, and enduring hold upon action, inclination, or involuntary tendency, as to a habit or indulgence. *Addicted* may be used in a good, but more frequently a bad, sense; as, *addicted* to study; *addicted* to drink. *Devoted* is used chiefly in the good sense; as, a mother's *devoted* affection. Mexico* vol. i, ch. 4, p. 97. **2.** Equal in size, extent, value, etc. [< L. *adæquatus,* pp. of *adæquo,* make equal, < *ad,* to, + *æquus,* level.]

Syn.: able, adapted, capable, commensurate, competent, equal, fit, fitted, fitting, qualified, satisfactory, sufficient, suitable. *Adequate, commensurate,* and *sufficient* signify *equal* to some given occasion or work; as, a sum *sufficient* to meet expenses; an *adequate* remedy for the disease. *Commensurate* is the more precise and learned word, signifying that which exactly measures the matter in question. *Adapted, fit, suitable,* and *qualified* refer to the qualities which match or suit the occasion. A clergyman may have strength *adequate* to the work of a porter; but that would not be a *fit* or *suitable* occupation for him. Work is *satisfactory* if it satisfies those for whom it is done, tho it may be very poor work judged by some higher standard. *Qualified* refers to acquired abilities; *competent* to both natural and acquired: a *qualified* teacher may be no longer *competent,* by reason of ill health. *Able* and *capable* suggest general ability and reserved power, *able* being the higher word of the two. An *able* man will do something well in any position. A *capable* man will come up to any ordinary demand. We say an *able* orator, a *capable* accountant. — Ant.: disqualified, inadequate, incompetent, inferior, insufficient, poor, unequal, unfit, unqualified, unsatisfactory, unsuitable, useless, worthless. — Prep.: adequate *to* the demand; *for* the purpose.

— **adequate cognition** (*Logic*), a cognition involving no nuclear or indistinct elements. — **a. definition, division,** or **partition** (*Logic*), one that embraces all the component attributes, constituent species, or characteristic marks, respectively, of the term defined or analyzed. — **a. knowledge,** knowledge that embraces all the properties necessary for a clear and complete conception of an object. — **a. stimulus** (*Psychophysics*), the stimulus specifically adapted, without mixture with another stimulus, to excite a given sensation.

— **ad′e-quate†,** *vt.* To equalize; be equal to. — **-ly,** *adv.* — **-ness,** *n.* — **ad″e-qua′tion,** *n.* The making or being adequate; also, resulting equivalency; an equivalent. — **ad′e-qua-tiv(es,** *a.* [Rare.] **1.** Of or pertaining to adequation. **2.** Adequate.

ad-her′ent, *n.* **1.** One who is attached to or follows a person, party, or principle; one who is devoted or attached; as, the *adherents* of monarchy; an *adherent* of James II. **2.** [Rare.] An appendage. **ad-her′en‡.**

Syn.: aid, aider, ally, backer, follower, partizan, supporter. One may be an *aider* and *supporter* of a party or church, while not an *adherent* to all its doctrines or claims. An *ally* is more independent still, as he may differ on every point except the specific ground of union. The *allies* who overthrew Napoleon were united only against him. *Allies* are regarded as equals; *adherents* and *disciples* are followers. An *adherent* is one who is devoted or attached to a person, party, principle, cause, creed, or the like. The *adherent* depends more on his individual judgment, the *disciple* is more subject to command and instruction; thus we say the *disciples* rather than the *adherents* of Christ. *Partizan* has the

his tastes *addict* him to severe studies. **3.** *Rom. Law.* To deliver over formally by judicial sentence; award; assign (as for use, service, etc.). **4†.** To make over; surrender. [< L. *addictus*, pp. of *addico*, devote, < *ad*, to, + *dico*, affirm.]

Syn.: **(addicted)** abandoned, accustomed, attached, devoted, disposed, given, given over, given up, habituated, inclined, prone, wedded. A man may be *accustomed* to labor, *attached* to his profession, *devoted* to his religion, *given* to study or to gluttony (in the bad sense, *given over*, or *given up*, is a stronger and more hopeless expression, as is *abandoned*). One *inclined* to luxury may become *habituated* to poverty. One is *wedded* to that which has become a second nature; as, one is *wedded* to science or to art. *Prone* is used only in a bad sense, and generally of natural tendencies; as, our hearts are *prone* to evil. *Abandoned* tells of the acquired viciousness of one who has given himself up to wickedness. One is *addicted* to that which he has allowed to gain a strong, habitual, and enduring hold upon action, inclination, or involuntary tendency, as to a habit or indulgence. *Addicted* may be used in a good, but more frequently a bad, sense; as, *addicted* to study; *addicted* to drink. *Devoted* is used chiefly in the good sense; as, a mother's *devoted* affection. See ABANDONED.— Ant.: averse, disinclined, indisposed, unaccustomed.— Prep.: addicted to vice.—**ad-dict'**, **I.** *a.* Addicted. **II.** *n.* One who is addicted to some habit.—**ad-dict'ed-ness**, *n.*

Syn.: accost, apostrophize, appeal, approach, court, greet, hail, salute, speak to, woo. To *accost* is to speak first, to friend or stranger, generally with a view to opening conversation; *greet* and *hail* may imply but a passing word; *greeting* may be altogether silent; to *hail* is to *greet* in a loud-voiced and commonly hearty and joyous way, as appears in the expression "*hail* fellow, well met." To *salute* is to *greet* with special token of respect, as a soldier his commander. To *apostrophize* is to solemnly *address* some person or personified attribute apart from the audience to whom one is speaking; as, a preacher may *apostrophize* virtue, the saints of old, or even the Deity. To *appeal* is strictly to call for some form of help or support. *Address* is slightly more formal than *accost* or *greet*, tho it may often be interchanged with them. One may *address* another at considerable length or in writing; he *accosts* orally and briefly. See INSCRIBE; WOO.— Ant.: avoid, cut, elude, ignore, overlook, pass, pass by, shun.— Prep.: address the memorial *to* the legislature; the president addressed the people *in* an eloquent speech; he addressed an intruder *with* indignation.— **ad-dress'ing-ma-chine"**, *n. 6†. Preparation; also, that which is prepared. **7†.** Attire; dress.— **forms of address**, see FORM, *n.*

Syn.: adroitness, courtesy, dexterity, discretion, ingenuity, manners, politeness, readiness, tact. *Address* is that indefinable something which enables a man to gain his object without seeming exertion or contest, and generally with the favor and approval of those with whom he deals. It is a general power to direct to the matter in hand whatever qualities are most needed for it at the moment. It includes *adroitness* and *discretion* to know what to do or say and what to avoid; *ingenuity* to devise; *readiness* to speak or act; the *dexterity* that comes of practise; and *tact*, which is the power of fine touch as applied to human character and feeling. *Courtesy* and *politeness* are indispensable elements of good *address*. See SPEECH; SUPERSCRIPTION.— Ant.: awkwardness, boorishness, clownishness, clumsiness, fatuity, folly, ill breeding, ill manners, rudeness, stupidity, unmannerliness, unwisdom.— Prep.: address *in* dealing with opponents; the address *of* an accomplished intriguer; an address *to* the audience.

2. *Chem.* Same as VICINAL. [< L. *adjacen(t-)s,* < *ad,* near; and see JACENT.]

Syn.: abutting, adjoining, attached, beside, bordering, close, conterminous, contiguous, near, neighboring, next, nigh. *Adjacent* farms may not be connected; if *adjoining,* they meet at the boundary-line. *Conterminous* would imply that their dimensions were exactly equal on the side where they adjoin. *Contiguous* may be used for either *adjacent* or *adjoining. Abutting* refers rather to the end of one building or estate than to the neighborhood of another. Buildings may be *adjacent* or *adjoining* that are not *attached. Near* is a relative word, places being called *near* upon the railroad which would elsewhere be deemed remote. *Neighboring* always implies such proximity that the inhabitants may be neighbors. *Next* views some object as the nearest of several or many; *next* neighbor implies a neighborhood.— Ant.: detached, disconnected, disjoined, distant, remote, separate.— Prep.: *to.*— **ad-ja'cent-ly,** *adv.*

ad-ja'cent, *n.* That which is adjoining.

ad'jec-tiv-al, 1 aj'ek-tiv-əl; 2 ăj'ĕc-tĭv-al (XIII), *a.* Pertaining to or of the nature of an adjective.— **-ly,** *adv.*

ad'jec-tive, } 1 aj'ek-tiv; 2 ăj'ĕc-tĭv, *a.* **1.** Pertain-
ad'jec-tiv[s], } ing to an adjective. **2.** *Gram.* Depending upon or standing in an adjunct relation to a noun; as, an *adjective* attribute or word. **3.** Of the nature of an adjunct; dependent; secondary; as, the *adjective* and substantive elements in law. **4.** *Dyeing.* Requiring the use of a mordant; as, *adjective* dyes or dyeing. [< L. *adjectivus,* < *adjicio;* see ADJECT, *v.*]— **ad'jec-tive,** *tt.* To make or change into an adjective.— **ad'jec-tiv(e-ly**[s], *adv.*

ad'jec-tive, *n.* **1.** *Gram.* A word used to limit or qualify the application of a noun or a nominal phrase; as, *this* book; *sweet* sounds; *good* men; a *red* brick house.

Adjectives are of two kinds: (1) **limiting adjectives,** which merely define or restrict the meaning of the noun, and which include (*a*) the article, (*b*) the pronominal adjective, and (*c*) the numeral adjective; (2) **qualifying adjectives,** which denote some attribute of the object named by the noun.

2. [Rare.] A dependent or corollary.

On the correct use of **adjective** and **adverb:** The adjective is correctly used in close association with a verb when some quality of the *subject* rather than of the *action* of the verb is to be expressed. As a general rule, if any phrase denoting *manner* could be substituted, the adverb should be used; but if some part of the verb *to be* could be employed as a connective, the adjective is required; as, "The physician felt the pulse *carefully* (*i. e., in a careful manner,* or *with care*), and observed that the patient's hand felt *cold* (*i. e., was cold* to the touch)." Hence it is correct to say "He feels *sad,*" "It looks *bad,*" "It smells *sweet,*" "He stood *erect.*" In some cases either form would be correct, and the choice between them is a matter of force, emphasis, or individual taste.

They escaped all *safe* [or *safely*] to land. *Acts* xxvii, 44.

Special perplexity arises in connection with certain verbs, such as *appear, feel,* and *look,* that are used sometimes as active verbs and sometimes as substantive verbs (approaching equivalence to the verb *to be*). In the former sense these verbs take the *adverb,* in the latter the *adjective,* in accordance with the principle just stated; as, "The ship appeared [came into view] *suddenly*"; "The decision appears [apparently *is*] *unjust*"; "She looked [glanced] *shyly* at him"; "She looked [had the appearance of *being,* or *was*] *shy.*" Yet it is common to say "You are looking (or he is feeling) *badly,*" doubtless because *bad* refers not merely to physical or mental, but also to moral qualities, so that (for fear of suggesting moral implications) we are disinclined to say "You look *bad,*" "I feel *bad,*" or the like. But when a man suddenly disappears leaving accounts unsettled, we very promptly say "That looks *bad.*"

— **noun adjective,** the name of an attribute; an adjective: a former designation opposed to *noun substantive,* the name of an object.— **participial a.,** a participle used as an adjective, as "a *cultivated* mind."— **proper a.,** an adjective derived from a proper noun, as *American* from *America.*

[< F. *adorner,* < L. *adorno,* < *ad,* to, + *orno,* deck.] SYN.: beautify, bedeck, deck, decorate, embellish, garnish, gild, illustrate, ornament. To *embellish* is to brighten and enliven by adding something that is not necessarily or very closely connected with that to which it is added; to *illustrate* is to add something so far like in kind as to cast a side-light upon the principal matter. An author *embellishes* his narrative with fine descriptions, the artist *illustrates* it with beautiful engravings, the binder *gilds* and *decorates* the volume. *Garnish* is on a lower plane; as, the feast was *garnished* with flowers. *Deck* and *bedeck* are commonly said of apparel; as, a mother *bedecks* her daughter with silk and jewels. To *adorn* and to *ornament* alike signify to add that which makes anything beautiful and attractive, but *ornament* is more exclusively on the material plane. To *ornament* is to add what really confers beauty; as, the gateway was *ornamented* with delicate carving. *Adorn* is more lofty and spiritual, referring to a beauty which is not material, and can not be put on by ornaments or decorations, but seems in perfect harmony and unity with that to which it adds a grace. We say of some admirable scholar or statesman, "he touched nothing that he did not *adorn.*" — Ant.: deface, deform, disfigure, mar, spoil. — Prep.: *with.* — **a-dorn'.** [Archaic.] **II.** *a.* Adorned. **II.** *n.* An ornament. — **ad"or-na'tion†,** *n.* — **a-dorn'er,** *n.* — **a-dorn'ing,** *pa.* Ornamental; decorative. — **a-dorn'ing,** *n.* [Archaic.] Ornamentation. *1 Pet.* iii, 3. — **a-dorn'ing-ly,** *adv.* In an ornamental manner. — **a-dorn'ment,** *n.* The act of adorning, or that which adorns; ornamentation; an ornament.

A-dul'lam-ite, 1 ə-dul'əm-ait; 2 a-dŭl'am-it, *n.* **1.** A native or inhabitant of Adullam. *Gen.* xxxviii, 1. **2.** *Eng. Hist.* One of those members of the British House of Commons who, in 1866, seceded from the Liberal party because of the introduction of a bill to extend the electoral franchise: so called from the application by Mr. Bright to this third party (called also the *Cave party*) of the incident narrated of David in 1 Sam. xxii, 1, 2, as follows:

The right hon. gentleman is the first of the new party who has expressed his great grief, who has retired into what may be called his political Cave of *Adullam*, and he has called about him 'every one that was in distress and every one that was discontented.' BRIGHT 1866, *Sp.* (1876) 349. [M.]

a-dult', 1 ə-dult'; 2 a-dŭlt' (XIII), *a.* Of or pertaining to mature life; having reached maturity; full-grown:

formerly used of persons, but recently of animals and plants also; as, an *adult* Chinaman; an *adult* orang; an *adult* rose-tree.

Work is the play of the *adult* faculties.
O. S. WEAVER *Heart of the World* p. 193. [F. L. & CO. 1883.]

[< L. *adultus*, pp. of *adolesco*; see ADOLESCENT.]

a-dult', *n.* **1.** One who or that which has attained the age of maturity; especially, a fully developed person.

One babe commonly makes four or five out of the *adults* who prattle and play to it. EMERSON *Essays* p. 45. [H. M. & CO. 1890.]

2. *Law.* One who is of full age for independent personal action; one who has attained to legal majority. —**a-dult'ism**, *n.* The condition of being an adult.

a-dul'ter†, *v.* To commit adultery; corrupt.

a-dul'ter†, *n.* An adulterer.

a-dul'ter-ant, 1 ə-dul'tər-ənt; 2 ə-dŭl'ter-ant. **I.** *a.* Adulterating. **II.** *n.* An adulterating substance.

a-dul'ter-ate, 1 ə-dul'tər-ēt; 2 ə-dŭl'ter-āt, *v.* [-AT'ED; -AT'ING.] **I.** *t.* **1.** To make impure by admixture of other or baser ingredients; corrupt; render counterfeit; as, to *adulterate* sugar; to *adulterate* a language with slang.

In the United States the accepted view has been formulated thus: —'Except in special cases, a food in general is deemed to be *adulterated* if anything has been mixed with it so as to reduce or lower its quality or strength; or if anything inferior or cheaper has been substituted wholly or in part therefor; or if any valuable constituent has been abstracted wholly or in part from it; or if it consists wholly or in part of a diseased, decomposed, or putrid animal or vegetable substance; or if by colouring, coating, or otherwise it is made to appear of greater value than it really is; or if it contains any added poisonous or injurious ingredient.' This definition is fairly satisfactory so far as it goes, but it is insufficient in extension. The main principle on which our Sale of Food and Drugs Act of 1875 is based should be included in it, namely, that under any circumstances an article shall be deemed to be *adulterated* if it can be proved that that article is not of the nature, substance, and quality' demanded by the purchaser, or if it is not of 'the nature, substance, and quality' which the purchaser is to be presumed to have expected. CHARLES E. CASSAL *The Adulteration of Food* in *Journal of the Royal Society of Arts*. Mar. 17, '11, p. 451.

No drug defined in the United States Pharmacopœia or National Formulary shall be deemed to be *adulterated* under this provision if the standard of strength, quality, or purity be plainly stated upon the bottle, box, or other container thereof, although the standard may differ from that determined by the test laid down in the United States Pharmacopœia or National Formulary. *The Food and Drugs Act* June 30, '06, § 7.

2†. To pollute by adultery.

II†. *i.* To commit adultery. [< L. *adulteratus*, pp. of *adultero*, < *adulter*, adulterer, < *ad*, to, + *alter*, other.]

a-dul'ter-ate, *a.* **1.** Adulterated; spurious. **2.** [Archaic.] Tainted with adultery; adulterous. —**-ly**, *adv.* —**-ness**, *n.*

a-dul"ter-a'tion, 1 ə-dul'tər-ē'shən; 2 a-dŭl'ter-ā'shon, *n.* **1.** The act of adulterating, or corrupting by admixture of foreign and baser elements, especially for fraudulent ends; debasement; as, the *adulteration* of tea, wine, etc. The chief articles subject to adulteration, and their adulterants, are *beer* (arsenic, picric acid, cream of tartar, various herbs), *butter* (water, cheese, oleomargarin, boric acid), *cheese* (coloring-matter, animal fat, tallow, and potato meal), *cocoa* and *chocolate* (starch, sugar, sawdust, oils, fats), *coffee* (chicory, carrots, turnips), *distilled liquors* (caramel, dilute alcohol), *flour* and *bread* (alum, sulfate of copper), *honey* (glucose, corn-starch), *lard* (stearin, cotton-seed-oil, paraffin, wax, tallow), *milk* (by diluting, skimming, adding animal fats, coloring, borax, salt, carbonate of soda), *mustard* (starch, rape-seed, radish-seed, and turmeric-powder), *olive-oil* (cottonseed- and peanut-oils), *pickles* and *preserved green vegetables* (colored green with acetate of copper), *preserves* (gelatin, glue), *tea* (leaves of sloe, ash, etc.), *tobacco* (niter, glycerin, moisture, and flavored by artificial means), *wines* (water, alcohol, caramel, logwood, salicylic acid, gypsum).

Probably the sum devoted annually by England to provide drugs for the *adulteration* of its own beer would have founded lovely little museums, and perfect libraries, in every village. RUSKIN *Fors Clavigera* vol. i, letter ii, p. 33. [W. & S. 1871.]

2. The result or condition of being adulterated; an adulterated substance or material. Syn.: see ALLOY.

[< L. *adulter*; see ADULTERATE, *v.*]

a-dul'ter-ous, 1 ə-dul'tər-us; 2 a-dŭl'ter-ŭs, *a.* **1.** Given to or characterized by adultery; illicit.

Jean Jacques [Rousseau], like Wieland, threw a grace not his own, of the sweet morning air and woodland dreaming, over *adulterous* passion. *Quarterly Review* Apr., 1891, p. 174.

2. Born of adultery; adulterine. **3.** [Rare.] Pertaining to or characterized by adulteration.—**a-dul'ter-ous-ly**, *adv.*

a-dul'ter-y, 1 ə-dul'tər-i; 2 a-dŭl'ter-y, *n.* [-IES, 1 -IZ; 2 -is, *pl.*] **1.** The sexual intercourse of two persons either of whom is married to a third person. [6 *Ala. Rep.* 864; 22 *Iowa Rep.* 364.] It is called *double adultery* where both are married, and *single* where only the woman is married. Adultery being entirely the subject of statutory enactment, some differences and occasional conflicts are found in the definition of the offense in the statutes of various countries and of the different States of the United States. In England the common law did not take cognizance of the offense as a crime, but turned it over to the jurisdiction of the courts spiritual. BLACKSTONE *Comm.* bk. III, p. 139.

Next to murder, *adultery* is the greatest of all social crimes. C. HODGE *System. Theol.* vol. iii, ch. 19, p. 386. [S. 1874.]

2. Any lewdness or unchastity of act or thought, as in violation of the seventh commandment. *Matt.* v, 27, 28. **3.** *Eccl.* A marriage not approved by ecclesiastical authorities, as of a Jew and a Christian. **4.** Unfaithfulness to God or to religious vows; any form of sin or moral degradation, especially idolatry and apostasy. **5.** The fine imposed for adultery. **6.** [Archaic.] *Eng. Ch.* Intrusion into a bishopric or benefice while the legal incumbent is still living. **7†.** Tree-grafting. **8†.** Adulteration. [< L. *adulterium*, < *adulter*; see ADULTERATE.]

æ[2], 1 ī, e, *or* ı; 2 ē, ĕ, *or* e. A diphthong of Latin origin, equivalent to Greek *αι.* In many words derived from Latin, or from Greek through Latin, *e* is commonly substituted for the diphthong except in the plural terminations of certain Latin or New Latin words. *Æ,* for Greek *αι,* in proper names and words derived from them, is now common, and not uncommon in other words. In this dictionary *e* is used for *æ* in all words in which there is good authority for the former. Such words beginning with *æ* are defined under the form *e.* Regarding pronunciation, usage differs. The analogy of the language, the practise of orthoepists, and the alternate spelling with *e,* are in favor of *æ* being treated precisely like *e* in the same position. Classical scholars incline to pronounce it long (ī *or* ē) always. [M.]

Of the best English poetry, it might be said that it is understanding *aerated* by the imagination. LOWELL *Among my Books, Dryden* in first series, p. 21. [o. & co. 1871.]

4. To change (the blood or other circulating fluid) by the chemical agency of air; arterialize; oxygenate. [< L. *aër,* air; see AIR1, *n.*] — **aerated bread,** bread made from dough that has been raised by the mechanical introduction of carbon dioxid.— **a. waters,** effervescent waters naturally or artificially charged with carbon dioxid.

a"er-a'tion, 1 ē"er-ē'shan; 2 ā"er-ā'shon, *n.* **1.** The process or act of aerating, or the state of being aerated; as, the *aeration* of venous blood; the *aeration* of dough. **2.** *Brewing.* Absorption of air (oxygen) by yeast and wort through vigorous agitation.

a'er-a"tor, 1 ē'er-ē"ter; 2 ā'er-ā"tŏr, *n.* **1.** An apparatus for charging water with gas under pressure, especially with carbon dioxid. **2.** A device for supplying a stream of air or gas, as for fumigating, destroying fungi, etc.

a"er-el"a-te-rom'e-ter, 1 ē"er-el"ə-tı-rom'ı-tər; 2 ā"er-ĕl"a-te-rŏm'e-ter, *n.* Same as ELATEROMETER.

a"er-en'chy-ma, 1 ē"er-en'kı-ma; 2 ā"er-ĕn'ċy-ma, *n. Bot.* A form of plant-tissue, homologous with cork, found in stems of certain marsh and aquatic plants, and consisting of thin-walled, unsuberified cells which form large communicating intercellular spaces. [< Gr. *aēr,* air, + *en,* in, + *cheō,* pour.]

a"er-en"ter-ee-ta'si-a, *n. Pathol.* Intestinal inflation caused by gas.— **a-e're-oust,** *a.* Aerial. **a-e'ri-oust.**— **a"er-hem"o-e-to'ni-a,** *n. Med.* Death caused by the presence of air in the veins.

a-e'ri-al, 1 ē-ī'rı-əl; 2 ā-ē'ri-al, *a.* **1.** Of, pertaining to, or like the air; atmospheric; as, *aerial* clouds.

The sounds, as they receded, became more soft and *aerial.*
IRVING *Sketch-Book, Christmas Eve* p. 254. [o. P. P. 1851.]

2. Existing or performed in the air; occurring in the region above the earth; as, *aerial* navigation.

The light *aerial* gallery, golden-railed.
TENNYSON *Palace of Art* st. 12.

3. As unsubstantial as air; airy; invisible; spiritual.

Aerial beings, from the world unseen.
BRYANT *Our Fellow Worshippers* st. 6.

4. *Meteor.* Pertaining to the study of the free atmosphere; aerological; as, *aerial* observations. **5.** *Bot.* Developed in the open air, as the roots of the banian and the rootlets of ivy; growing in the air, and unconnected with the soil; as, *aerial* plants. See BANIAN and MANGROVE. [< L. *aërius,* < *aër;* see AIR1, *n.*] **a-e'ri-ant.** Syn.: see AIRY; CELESTIAL.— **aerial blue** (*Ceram.*), majolica having a grayish ground ornamented with designs in blue.— **a. car. 1.** The basket or cage depending from a balloon, for carrying passengers, etc. **2.** A wheeled car traveling on wires or on rails, sometimes having a part of its weight relieved by a balloon.— **a. ladder,** an extension ladder commonly mounted, as on a truck, and operated by levers: used by firemen in saving life or property.— **a. navigation,** same as AERONAUTICS.— **a. root** (*Bot.*), see under ROOT, *n.*— **a. sickness,** nausea caused by rapid ascensions or flights, as in air-planes.— **a. telegraphy,** same as WIRELESS TELEGRAPHY.— **a. tints** (*Paint.*), tints, colors, or modifications of colors used to mark distance or atmosphere. —**a-e'ri-al-ness†.**— **a-e'ri-al-ly,** *adv.* [wire†.

a-e'ri-al, *n.* Same as ANTENNA, 3. [< AER- + -IAL.] **aerial**

The *aerial* has a certain capacity with respect to the earth which is best expressed in micro-microfarads. J. A. FLEMING *Principles of Electric Wave Telegraphy* p. 552. [L. & co. '03.]

A-e'ri-an, 1 ē-ī'rı-ən; 2 ā-ē'ri-an, *n.* *Ch. Hist.* A member of a reforming sect of Asia Minor (4th century), named from Aerius, who maintained the parity of the ministry, rejected fasts, prayers for the dead, etc.

a"er-og'ra-phy, 1 ē'er-og'ra-fi; 2 ā'er-ōg'ra-fy, *n.* A description of or treatise on the atmosphere and its phenomena.—**a"er-og'ra-pher**, *n.*—**a"er-o-graph'ic**, *a.*—**a"er-o-graph'i-cal**, *a.*—**a"er-o-graph'i-cal-ly**, *adv.*

a'er-o-gun", 1 ē'er-o-gun'; 2 ā'er-o-gūn', *n.* An anti-aircraft gun. See GUN.

a"er-o-hy"dro-dy-nam'ic, *a.* Transmitting power by the upward motion of air forced into water; as, the *aerohydrodynamic* wheel. See WHEEL.—**a"er-o-hy-drop'a-thy**, *n.* Treatment of disease by hydropathy and the pneumatic method combined.—**a"er-o-hy'dro-plane**, 1 ē'er-o-hai'dro-plēn; 2 ā'er-o-hȳ'dro-plān, *n.* A hydroplane fitted with surfaces to aid it in gliding and rising from the water.—**a"er-o-hy'drous**, *a.* **1.** Enclosing a liquid in the pores or cavities, as some minerals. **2.** Characterized by the presence of both air and water.—**a"er-o-hyp-som'e-ter**, *n.* An air-barometer used for determining slight changes in altitude by determining the expansion at different pressures of a short air-column, of known or constant temperature.

i"er-ol'des, 1 ē'er-ol'diz; 2 ā'er-ōl'des, *n. Mineral.* A pale-blue, vitreous or resinous, somewhat brittle variety of beryl, containing silica, alumina, and glucina. [< AERO-; and see *-OID.*]

i-er'o-ist, *n.* One versed in air-craft.—**a"er-o-kil'no-scope**, *n.* Same as AEROCLINOSCOPE.—**a"er-o-kon'i-scope**, *n.* Same as AEROCONISCOPE.

a'er-o-lite, 1 ē'er-o-lait; 2 ā'er-o-lit (XIII), *n. Astron.* A mass falling on the earth from celestial space. See METEORITE.

During its flight through the sky such a body is called a meteor, and the pieces which fall from it are called *meteorites*, or *aerolites* (air-stones), or uranolites (heaven-stones), or simply meteoric stones. *Young Gen. Astron.* § 755, p. 430. [o. & co. 1889.] [< AERO- + -LITE.] **a'er-o-lith'ic.**—**a"er-o-lit'ic**, *a.*

a"er-o-li-thol'o-gy, 1 ē'er-o-li-thel'o-ji; 2 ā'er-o-li-thōl'o-gy, *n.* The branch of *astronomy* that treats of *aerolites.*

a"er-ol'o-gy, 1 ē'er-ol'o-ji; 2 ā'er-ōl'o-gy, *n.* The branch of physics that treats of the laws and phenomena of the atmosphere. Specif.: The branch of *meteorology* dealing with investigations of the free atmosphere, especially by means of kites and balloons: term introduced by W. Köppen in 1906, and adopted by the International Commission for Scientific Aeronautics. [< AERO- + *-LOGY.*]—**a"er-o-log'ic**, *a.*—**a"er-o-log'i-cal**, *a.*—**a"er-ol'o-gist**, *n.*

a'er-o-man"cy, *n.* The art of divination or augury by atmospheric phenomena; hence, a forecasting of the weather or of atmospheric changes.—**a'er-o-manc"er**, *n.*—**a"er-o-man'tic**, *a.*—**a"er-o-ma'ni-ac**, *n.* One who shows an overfondness for aeronautics.—**a"er-o-me-chan'ics**, *n.* **1.** The science that treats of equilibrium and motion of air and gases, including *aerostatics* and *aerodynamics.* **2.** Pneumatics.—**a"er-o-me-chan'ic**, *a.* & *n.*

a"er-om'e-ter, 1 ē'er-om'i-ter; 2 ā'er-om'e-ter, *n.* **1.** An apparatus for weighing and for estimating the tension of air or other gases. **2.** An instrument which measures and automatically records the speed of an aeroplane. **3.** A flying-machine: balloon. **4.** A windmill fitted with sails or vanes of metal.—**a"er-om'e-try**, *n.* The science of weighing and measuring air and other gases.—**a"er-o-met'ric**, *a.*

a'er-o-mo"tor, 1 ē'er-o-mō'tor; 2 ā'er-o-mō'tor, *n.* A light-weight motor, as for an aeroplane. [< AERO- + MOTOR.]

a"er'o"nat', 1 e'er'e'nā'; 2 ā'er'o'nā', *n.* [F.] [Rare.] A motor-driven balloon; a dirigible balloon: an air-ship.

a'er-o-naut, 1 ē'er-o-nēt; 2 ā'er-o-nat (XIII), *n.* **1.** One who navigates the air in a balloon or air-ship; a balloonist. ORVILLE WRIGHT. **2.** An aviator. [< F. *aéronaute*, < Gr. *aēr* (see AIR¹, *n.*) + *nautēs*, sailor.]

a"er-o-nau'tic, 1 ē'er-o-nē'tik; 2 ā'er-o-na'tic, *a.* Of or pertaining to an aeronaut, aeronautics, or aeronautism; flying. **a"er-o-nau'ti-cal.**

a"er-o-nau'tics, 1 ē'er-o-nē'tiks; 2 ā'er-o-na'tics, *n.* The branch of aerostatics which treats of floating in or navigating the air as in an air-ship or aeroplane. **2.** The art or practise of sailing or floating in the air; ballooning. ORVILLE WRIGHT. Compare AVIATION.

AERONAUTIC TERMS.

The following is a list of terms important in aeronautics. Those not self-explanatory are defined in vocabulary place.

aerocurve	drome	pylon
aerodrome	fin	quartoplane
aerofoil	flapping flight	radial spoke
aeromotor	flying angle, f.- machine	rib
aeronaut	frame	sighting-tips
aeronef	fuselage	sea-floater
aeroplane	glider	semibord
aerostat	gliding	semiradial engines
aerostatics	gliding angle, g.- machine	single-surfaced
aerostation		skid
aileron	hangar	slip
air-speed	head-resistance	soaring flight
angle of entry, a. of incidence, a. of trail	helicopter	sounding-balloon
	lift	spar
apteroid	mast	spread
aspect, a.-ratio	monoplane	starting-mill, s.-truck
aspiration	multicellular	stepped monoplane
aviation	multiplane	tail
aviator	nacelle	tangential
biplane	ornithopter	tie
box kite	orthogonal	tilt and dip
camber	orthopter	triplane
cross-tail	pilot-balloon	trochoidal
dirigible	polyplane	turnbuckle
drift	port	wind-wagon

a'er-o-naut-ism, 1 ē'er-o-nēt-izm; 2 ā'er-o-nat-izm, *n.* The practise of aeronautics; ballooning.

a'er-o-nef, 1 ē'er-o-nef; 2 ā'er-o-nēf, *n.* A machine for navigating the air, as an aeroplane, helicopter, etc. See quotation. [< AERO- + F. *nef*, < L. *navis*, ship.]

The term *aeronef* has been recommended by the fourth International Congress to designate all aerial craft driven by motors as distinct from the inert ordinary spherical balloon. . . . *Aeronef* is no new word. It was used in Jules Verne's 'The Clipper of the Clouds,' and . . . years before Jules Verne. C. TURNER *Aeronautics in Journal of Royal Society of Arts* Dec. 24, '09, p. 156, col. 1.

A-er'o-pe, 1 ē-er'o-pi; 2 ā-er'o-pē, *n. Myth.* The mother of Agamemnon. **A-e-ro'pe**: [Gr.].

a"er-o-pha'gi-a, *n.* Deglutition of air, seen in hysteria.

a'er-o-phane, 1 ē'er-o-fēn; 2 ā'er-o-fān, *n.* A thin fabric like lace. [< AERO- + Gr. *phainomai*, appear.]

a-er-oph'i-lous, 1 ē'er-of'i-lus; 2 ā'er-ōf'i-lus, *a.* Air-loving: said of organisms, like bacteria, to the development of which air is necessary.

a"er-o-pho'bi-a, 1 ē'er-o-fō'bi-a; 2 ā'er-o-fō'bi-a, *n.* Morbid dread of a current of air, sometimes manifested in hydrophobia, also in hysteria and other nervous diseases. [< AERO- + -PHOBIA.] **a'er-o-pho"by.**—**-bic**, *a.*

a'er-o-phone, 1 ē'er-o-fōn; 2 ā'er-o- ōn, *n.* **1.** An instrument for amplifying sound-waves, as those of the voice, without lessening distinctness, consisting of a diaphragm vibrated by the voice and controlling the escapement of compressed air from a receiver, which in its turn actuates a larger diaphragm. **2.** An instrument to assist the deaf in hearing, consisting of three horns, of which two are held to the ears and one to the speaker's mouth. **3.** A wireless telephone. [< AERO- + Gr. *phonē*, sound.]—**a"er-o-phon'ics**, *n.* The science of sound-waves.—**a"er-oph'o-ny**, *n.*

a'er-o-phore, *n.* **1.** A portable device for permitting respiration under water, in smoke-charged air, etc.: essentially, a vessel containing potassium hydroxid or other substance for absorbing the waste products of respiration, serving at once as a receptacle and revivifier of vitiated air. **2.** A mechanical device for *diffusing moisture in the air*, as of spinning-factories, to counteract the effect of the electricity generated by the machinery.—**a"er-oph'o-rous**, *a.* Same as AEROPHOROUS.—**a"er-o-phys'ics**, *n.* The science or study of physics in its relation to the atmosphere.—**a"er-o-phys'i-cal**, *a.*—**a'er-o-phyte**, *n.* A plant growing entirely in the air and not connected with the soil, as many orchids: an air-plant.

a'er-o-plane, 1 ē'er-o-plēn; 2 ā'er-o-plān, *n. Aero.* **1.** A flying-machine sustained by the reactions resulting when one or more surfaces are moved through the air edgewise at a small angle of incidence. ORVILLE WRIGHT. See BIPLANE; HYDROAEROPLANE; HYDROPLANE; MONOPLANE; MULTIPLANE; QUADRIPLANE; TRIPLANE. Compare AVIATION. **2.** One of the supporting surfaces, substantially flat, by means of which a flying-machine is sustained in the air.

We have used the term *aeroplane* in this specification . . . to indicate the supporting surface or supporting surfaces by means of which the machine is sustained in the air, and by this term we wish it to be understood as including any suitable supporting *surface which normally is substantially flat. Specification and Claims of the Wright Patent in* LOUGHEED *Vehicles of the Air* p. 455. [E. & B. '09.]

3. A small plane for experiment in aerostatics. [< AERO- + Gr. *planēs*, wanderer; confused in later use with PLANE², *n.*]—**a'er-o-plane**, *tr.* To fly in the air by means of an aeroplane.—**a'er-o-plan"ist**, *n.*

a"er-o-pleus'tic, *a.* Pertaining to aerial navigation.—**a"er-o-po-rot'o-my**, *n. Surg.* The operation of letting air into obstructed air-passages, as by tracheotomy.—**a'er-o-pyle**, *n.* An orifice in the legumes of some plants.—**a"er-or-thom'e-ter**, *n.* A combined barometer and air-thermometer.—**a'er-o-scep"sy**, *n. Zool.* Perception of atmospheric changes by certain insects, slugs, etc.: aeroscopy. **a'er-o-scep"sist.**—**a'er-o-scope**, *n.* **1.** An instrument by which microscopic objects may be gathered from the atmosphere. **2.** An oscillating, pillar-like steel structure of varying height, used as an observation-point.—**a"er-o-scop'ic**, *a.*—**a"er-os'co-py**, *n.* **1.** Observation of atmospheric conditions; perception of the state of the weather. **2.** Perception of atmospheric changes by certain animals, as by insects: aerosopy. **3†.** Weather-prognostication: aeromancy.

æ'rose, *a.* Classic form of EROSE.

a"er-o-sid'er-ite, *n.* A meteorite of which iron is the chief constituent.—**a"er-o-sid'er-o-lite**, *n.* A meteorite that is both metallic and stony.—**a'er-o-site**, *n. Mineral.* Same as PYRARGYRITE.—**a'er-o-sphere**, *n.* The atmosphere considered as a spherical shell of gases surrounding the earth.—**A"er-o-spi-ran'ti-a**, *n. pl. Crust.* A division of isopods living on land and breathing air directly, as the sow-bugs.

a'er-o-squad", 1 ē'er-o-skwed'; 2 ā'er-o-skwōd', *n.* An escadrille.

a'er-o-stat, 1 ē'er-o-stat; 2 ā'er-o-stāt, *n.* **1.** An apparatus traversing, floating in, or sustained by the air: the original name of the balloon. **2.** [Rare.] An aeronaut. [< F. *aérostat*, < Gr. *aēr* (see AIR¹, *n.*) + *statos*, standing, < *histēmi*, make stand.]

a"er-o-stat'ic, 1 ē'er-o-stat'ik, -i-kal; 2 ā'er-o-**a"er-o-stat'i-cal.** stāt'ic, -i-cal, *a.* **1.** Pertaining to aerostatics; pneumatic; airy.

It is common enough to see a little thin Hen that would not burden an infant's brain, puffed out with gaseous words, until it looms up and floats away in *aerostatic* pachidermes. W. B. SPEARING *Parables Unbridled, Last Sheep* p. 55. [ST. & CO.]

2. Pertaining to aeronautics: aeronautic. [< AERO- + Gr. *statikos*; see STATIC.]—**aerostatic balance**, a barometer-like instrument for determining the weight of the air.

a"er-o-stat'ics, 1 ē'er-o-stat'iks; 2 ā'er-o-stāt'ics, *n.* **1.** *Physics.* The branch of pneumatics that treats of the equilibrium, pressure, and mechanical properties of air and gases not in motion. **2.** Aerostation.

a"er-o-sta'tion, 1 ē'er-o-stā'shen; 2 ā'er-o-stā'shon, *n.* **1.** Aerial navigation with the use of a sustaining fluid lighter than air: differentiated from *aviation.*

Robin, whose high state of civilization
Precludes all idea of *aerostation.*
BARHAM *Ingoldsby Legends, Witches' Frolic* st. 44.

2†. Aerostatics. [< AERO- + STATION.]

a'er-o-steam"engine, an engine operated by air and steam. See ENGINE.—**a"er-o-tax'is**, *n. Biol.* The stimulus produced by oxygen upon bacteria.—**a"er-o-ther'a-peu'tics**, *n.* A system of treating disease by varying the atmospheric pressure upon the patient, sometimes also by changing the composition of the air.—**a"er-o-ther'a-py**, *n.*—**a"er-o-ther'mal**, *a.* Applying heated air: pertaining to atmospheric heat.—**a"er-o-to-nom'e-ter**, *n.* An apparatus by which *the tension of gases in the blood can be measured.*—**a"er-o-trop'ic**, *a. Bot.* Seeking air.—**a"er-ot'ro-pism**, *n.* The turning of roots from the direction of their natural growth, by the action of gases.—**a'er-o-view"**, *n.* That which is seen or viewed from the observation-seat of an aeroplane: also, a chart of that so seen.—**a'er-o-yacht"**, *n.* A large flying-boat or hydroaeroplane.

æ'er-ter-i-ver'sion, etc. See AERTERIVERSION, etc.

æ-ru'gi-nous, *a.* Classic form of ERUGINOUS.

æ-ru'go, 1 i-rū'go; 2 ē-rū'go, *n.* **1.** Copper-rust; verdigris; especially, green copper-rust adhering to old bronzes; the patina, or ærugo nobilis. **2.** [Rare.] The rust of any metal. [L., < *æs* (ær-), ore, copper.]

a'er-y, 1 ē'er-i; 2 ā'er-y, *a.* **1.** Airy; spiritual.

Aery tongues that syllable men's names
On sands. MILTON *Comus* l. 208.

2. High in the air; lofty; as, an *aery* mountain-peak. [A favorite word with Milton: in recent usage confined to poetry.] [< L. *aërius*, < *aēr*; see AIR¹, *n.*]

a'er-y, *v.* See AERIE.—**a'er-yi**, *vt.* To build an aerie.

a"er-yp-som'e-ter, *n.* Same as AEROHYPSOMETER.

æs, 1 is; 2 ēs, *n.* [L.] *Rom. Antiq.* Money, as being originally made of copper or bronze.—**æs gra've**, large bronze Roman coins of about the 5th century B. C.—**æs ru'de**, the first Roman money, consisting of masses of copper, uncoined, but of regulated weights from 2 ounces to 2 pounds.

Æ-sal'i-dæ, 1 i-sal'i-di; 2 ē-sāl'i-dē, *n. pl. Entom.* A family of lamellicorn beetles. **Æ'sa-lus**, *n.* (t. g.)—**æ'sa-lid**, *a.* & *n.*—**æ'sa-loid**, *a.*

æ'sa-lon, 1 i'se-lon; 2 ē'sa-lōn, *n.* The European merlin. See MERLIN. [< Gr. *aisalōn*, kind of hawk.]

æse, 1 ask; 2 āse, *n.* [AS.] An armed galley of the old Northmen.

Then King Alfred commanded long ships to be built to oppose the *æses.* KNIGHT *England* vol. i, ch. 8, p. 35. [L. K. & CO. 1880.]

Æs'chi-nes, 1 es'ki-niz; 2 ēs'ci-nēs, *n.* An Athenian orator (389–314 B. C.); rival of Demosthenes. **Als-chi'nes**: [Gr.].

Æsch'ni-dæ, 1 esk'ni-di; 2 ēsc'ni-dē, *n. pl. Entom.* A family of dragon-flies having unequal wings with the triangles alike. **Æsch'na**, *n.* (t. g.) [Prob. < Gr. *aischros*, ugly.]—**æsch'nid**, *a.* & *n.*—**æsch'noid**, *a.*

æs"chro-la'li-a, 1 *es'kro-lē'li-a*; 2 *ēs'cro-lā'li-a*, *n. Obscenity or filthiness of speech as a symptom of insanity.* [< Gr. *aischros*, shameful, + *lalia*, speech.]

Æs"chy-le'an, 1 es'ki-li'an; 2 ēs'cy-lē'an, *a.* **1.** Produced by or belonging to the Greek dramatist Æschylus; as, the *Æschylean* drama. **2.** Of or like the writings or style of Æschylus; as, the *Æschylean* tone.

Æs'chy-lus, 1 es'ki-lus; 2 ēs'cy-lūs, *n.* A Greek tragic poet and dramatist (525–456 B. C.); author of seventy plays, of which only seven are extant; originator of dramatic dialog and was considered by the Greeks to be the father of tragedy; fought at Marathon and Salamis: *Prometheus Vinctus*, etc. **Als'chy-los**: [Gr.].

Æs"chy-nan'thus, 1 es'ki-nan'thus; 2 ēs'cy-nān'thūs, *n. Bot.* A genus of highly ornamental tropical plants of the gesnera family (*Gesneraceæ*), with pendent stems, opposite fleshy leaves, and scarlet or orange-scarlet gamopetalous flowers: much cultivated in hothouses. [< Gr. *aischynē*, shame (< *aischynomai*, be ashamed), + *anthos*, flower.]

æs'chy-nite, *n.* Classic form of ESCHYNITE.

Æs"chy-nom'e-ne, 1 es'ki-nem'i-ni; 2 ēs'cy-nōm'e-nē, *n. Bot.* A genus of herbs or shrubs of the bean family (*Fabaceæ*), mainly South-American. *Æ. hispida*, the sensitive joint-vetch, is found in the southeastern United States. [L., sensitive plant, < Gr. *aischynomenē*, modest, f. pp. of *aischynō*, disfigure.]—**æs"chy-nom'e-nous**, *a. Bot.* Sensitive, as the leaves of some species of *Æschynomene.*

æs-cig'e-nin, 1 i-sij'i-nin; 2 ē-cij'e-nin, *n. Chem.* An organic crystalline compound ($C_{12}H_{22}O_6$) derived from horse-chestnut seeds. [< L. *æsculus*, Italian oak, + *-geno*, bear.]

æs-cin'ic, *a.* Same as ESCINIC.

æ"sci-or'ce-in, *n. Chem.* See ESCIORCEIN.

Æs"cu-la'ce-æ, 1 es'kiu-lē'si-ī; 2 ĕs"cū-lā'ce-ē, *n. pl. Bot.* Same as HIPPOCASTANACEÆ.— **æs"cu-la'ceous**, *a.*

Æs"cu-la'pi-an, *a.* Classic form of ESCULAPIAN.

Æs"cu-la'pi-us, 1 es'kiu-lē'pi-us; 2 ĕs"cū-lā'pi-ūs, *n. Myth.* The son of Apollo and god of medicine: mentioned in Homer as a physician. See ASCLEPIUS. **As-kle'pi-ost** [Gr.].

æs"cu-let'ic, æs"cu-le'tin, æs'cu-lic, æs'cu-lin, æs"cu-lo-tan'nic. Classic forms of ESCULETIC, etc.

Æs'cu-lus, 1 es'kiu-lus; 2 ĕs'cū-lŭs, *n. Bot.* A genus of American trees of the family *Æsculaceæ*, the horse-chestnuts and buckeyes, having opposite digitately 5–9-foliolate leaves, large terminal thyrsoidal clusters of white, red, or pale-yellow flowers, and large subglobose seeds in a coriaceous spiny capsule. [L., winter-oak.]

Æ'sir, 1 ī'gər or ē'sər; 2 ē'sər *or* ā'sər, *n. pl.* [As, *sing.*] [Ice.] The gods of the Northmen; the gods of Asgard, as distinguished from the *Vans*.

There were twelve chief gods or *Æsir* [dwelling in Asgard], besides Odin (the 'all-father'), viz.: Thor, Baldur, Niord, Frey, Ty or Tyr, Bragi, Heimdal, Hod, Vidar, Ull, Forseti, and Loki or Lopt. *Inter. Cyc.* vol. i, p. 126.

æs'ne-cy, *n.* Same as ESNECY.

Æ'son, 1 ī'sən; 2 ē'son, *n. Myth.* The father of Jason.

Æ'sop, 1 ī'səp; 2 ē'sop, *n.* A Greek fabulist (6197–564 B. C.); said to have been born in Phrygia and to have been a slave until freed by Iadmon.— **Æsop of Arabia**, sobriquet of Lokman.— **Æ. of England**, sobriquet of John Gay.— **Æ. of France**, sobriquet of Jean de la Fontaine.— **Æ. of Germany**, sobriquet of Gotthold Ephraim Lessing. **Æsopt.**

Æ-so'pi-an, Æ-sop'ic, *a.* Classic forms of ESOPIAN, etc.

Æ-so'pus, 1 ī-sō'pus; 2 ē-sō'pŭs, *n.* **1. Æsop. 2. Clodius**, a Roman actor of the 1st century. [*Judith* iv, 4.

Æ-so'ra, 1 ī-sō'rə; 2 ē-sō'rə, *n. Bib.* (Apocrypha, R. V.).

æs'tha-cyte, 1 es'thə-sait; 2 ĕs'tha-cȳt, *n.* Spong. One of the spindle-shaped cells or sense-organs. [< Gr. *aisthanomai*, feel, + *kytos*, cell.]

æs-the"ma-tol'o-gy, *n.* Classic form of ESTHEMATOLOGY.

æs-the'si-a, æs-the'sis, etc. Classic forms of ESTHESIA, etc.

æs-the'sin, 1 es-thī'sin; 2 ĕs-thē'sin, *n.* A nitrogenous compound ($C_{28}H_{38}O_3N$) derived from phrenosin by hydrolysis. [< Gr. *aisthesis*, feeling.]

æs-the'tal, 1 es-thī'tel; 2 ĕs-thē'tal, *a.* Sensorial.

æs'thete, *n.* Classic form of ESTHETE.

æs-thet'ic, æs-thet'i-cism, æs-thet'i-cist, æs-thet'ics, etc. Classic forms of ESTHETIC, etc.

æs"the-tol'o-gy, æs-thet'o-phore, etc. Scientific forms of ESTHETOLOGY, etc.

æs-tif'er-ous, *a.* Same as ESTIFEROUS. [ESTIVAL, etc.

æs-ti'val, æs'ti-vate, æs"ti-va'tion. Classic forms of

æs'tivet, *a.* Of or pertaining to summer; hot.

æs'tu-a-ry, *n.* Classic form of ESTUARY.

æs'tu-oust, *a.* Agitated as if boiling. **æs'tu-antt.**— **æs'tu-atet**, *vt.* To boil or surge.— **æs"tu-a'tiont**, *n.*— **æs'turet**, *n.* Commotion; boiling.

æs'tus, 1 es'təs; 2 ĕs'tŭs, *n.* [L.] Billowy motion; rise and fall; fervor of passion.

æ-sym'ni-um, 1 ī-sim'ni-um; 2 ē-sym'ni-ŭm, *n. Arch.* The building erected by Æsymnus the Megarean by suggestion of the Delphic oracle.

A'e-ta, 1 ā'ē-tə; 2 ä'ē-tä, *n.* See NEGRITO.

Æ-te'l-dæ, 1 ī-tī'l-dī; 2 ē-tē'l-dē, *n. pl. Helminth.* A family of chilostomatous polyzoans with tubular zoœcia. —**Æ-te'a**, *n.* (t. g.)— **æ'te-id, n.**— **æ'te-oid**, *a.*

æ-tha'l-um, 1 ī-thē'li-um; 2 ē-thā'l-ŭm, *n.* [-LI-A, *pl.*] **1.** [Æ-] A former genus of slime-molds forming cake-like masses on spent tan in greenhouses, whence so called. **2.** A sporiferous body in the slime-molds, formed by many combined plasmodia; flowers of tan. [< Gr. *aithaʹos*, smoke.]

Æth'el-bald, -red, -wolf. See ETHELBALD, etc.

Æth'el-stan, *n.* Same as ATHELSTAN.

a-e'the-o-gam, 1 ē-ī'thi-o-gam; 2 ā-ē'the-o-ğăm, *n. Bot.* In De Candolle's classification, a cryptogam with sexual organs, as a fern or a moss; opposed to *amphigam*. [< Gr. *aēthēs*, uncommon, + *gamos*, marriage.] —**a-e"the-o-gam'ic, a-e"the-og'a-mous**, *a.*

æ'ther, *n.* Classic form of ETHER.

Æ-the'ri-a, Æ"the-ri'i-dæ. Common spellings by late scientists of Lamarck's original ETHERIA, etc.

æ-the'ri-id, æ-the'ri-oid. Same as ETHERIID ETHERIOID. See ETHERIIDÆ.

æ-the'ri-on, *n.* Same as ETHERION.

Æ'thi-op, Æ"thi-o'pi-an. Same as ETHIOP, etc.

æ'thi-ops†, *n.* One of various black mineral pharmaceutical preparations. **e'thi-opst.**— **æthiops martial**, black iron oxid.— **æ. mineral**, sulfur triturated with mercury.

æth'moid, *a.* & *n.* Same as ETHMOID. [NOCHROI.

Æ-thoch'ro-i, 1 ī-thok'ro-ai; 2 ē-thŏc'ro-ī, *n.* See MELA-

æ'tho-gen, 1 ī'tho-jen; 2 ē'tho-ğĕn, *n. Chem.* Boron nitrid: named from its greenish-white phosphorescence under heat. [< Gr. *aithos*, fire, + -GEN.]

æ"tho-kir'rin, 1 ī'tho-kir'in; 2 ē'tho-kĭr'in, *n. Chem.* Dye from the yellow coloring-principle of the flowers of common toadflax. [< Gr. *aithos*, fire, + *kirrhos*, yellow.]

Æ'thra, 1 ī'thrə; 2 ē'thra, *n. Myth.* The mother of Theseus.

HOWELLS *Modern Instance* ch. 21, p. 256. [B. M. & CO. 1889.]

af-fin'i-ty, 1 a-fin'ı-tı; 2 ă-fin'i-ty, *n.* [-TIES, 1 -tiz; 2 -tiṡ, *pl.*] 1. Any connection through natural attraction or causal relation Especially: (1) Any natural drawing, inclination, liking, or friendliness; as, a strange *affinity* attracts opposite natures.

Perceptive wisdom that has not been vivified by life has in itself no *affinity* for life.
HOLLAND *Gold-Foil* ch. 1, p. 12. [s. 1869.]

(2) Any close relation or agreement; likeness in nature, character, taste, etc. (3) A Platonic or spiritual attraction held to exist between certain persons, especially between those of opposite sexes; also, the person exerting such attraction. (4) *Chem.* The property or force by which differing elements or groups of elements, when brought into contact, unite to form a new compound; chemical attraction; chemism. (5)† Companionship; intimacy. (6)† Vicinity; nearness. 2. Any connection through common origin. (1) Loosely, relationship or kinship by consanguinity, especially between races; collectively, relatives; kindred. (2) *Biol.* Structural likeness in organisms, indicating connection with or descent from a common stock; also, the relation based upon this likeness. (3) *Philol.* Structural likeness in languages, indicating a common origin.

'The Gothic and Celtic had the same origin with the Sanskrit. The old Persian may be added to the same family.' But how was that *affinity* to be explained?
MÜLLER *Science of Lang.* first series, lect. iv, p. 160. [s. 1875.]

3. Connection through certain relations formed, as by church or state. Especially: (1) Relationship through marriage (as opposed to blood-relationship), as of a husband to his wife's relatives and vice versa; collectively, kindred by marriage; as, Solomon made *affinity* with Hiram, king of Tyre. (2) *R. C. Ch.* The relationship between a man and his wife's relatives and between a woman and her husband's relatives. 4. *Geom.* A relation between two figures such that one can be made congruous with the other by extending its parts in one direction in a constant proportion. 5. *Psychol.* That quality or relationship of ideas which renders them capable of being associated, as similarity, contiguity, etc. 6. [Colloq., U. S.] A soul-mate; mistress. [< F. *affinité*, < L. *affinita(t-)s*, < *affinis*; see AFFINAL.]

Syn.: consanguinity. kin, kindred, relationship. *Consanguinity* is *relationship* by blood; *affinity* is *relationship* by marriage: either may be termed *kin* or *kindred*. In biology and philology. *affinity* may denote race-relationship or structural likeness. See ANALOGY; KIN.—**genetic affinity** (*Biol.*), affinity or relationship owing to similar origin. **genetic relationship‡.**—**predisposed a.** (*Chem.*), the cause, formerly assumed, of a change occasioned by a substance possessing an attraction or affinity for a product which may be found as a sequence of the change.—**af-fin'i-ta-tiv(e-ly²**, *adv.* By means of affinity.—**af-fin'i-tiv(e³**, *a.* Connected, related, or characterized by affinity; affined.

af-firm', 1 a-fūrm'; 2 ă-firm', *v.* **I.** *t.* 1. To declare or state positively; assert; make (a statement) and maintain (it) to be true; maintain; declare to be fact; aver; as, to *affirm* one's innocence; to *affirm* a falsehood.

It is impossible for the mind to *affirm* anything of that of which it knows nothing. HODGE *System. Theol.* vol. i. ch. 4, p. 354. [s. 1872.]

How can it be *affirmed* of any that they need no repentance?
TRENCH *Parables of Our Lord, Lost Sheep* p. 376. [A. 1880.]

2. *Gram. & Logic.* To make (a statement) in the affirmative; declare affirmatively, as opposed to declare negatively. 3. To confirm, establish, or ratify, as a law or judgment; make firm. 4. *Law.* (1) To reassert and ratify, as a judgment or decree of an inferior tribunal: said of a superior court. (2) To ratify and confirm, as one's previous act.

II. *i.* 1. To state the affirmative side. 2. To make a formal declaration or affirmation. 3. *Law.* To make solemn declaration under judicial charge and sanction. [< F. *affirmer*, < L. *affirmo*, < *ad*, to, + *firmus*, firm.]

Syn.: assert, asseverate, aver, declare, depose, indorse, maintain, predicate, propound, protest, state, swear, tell, testify. *Affirm* has less of egotism than *assert* (as seen in the word *self-assertion*), coming nearer to *aver*. It has more solemnity than *declare*, and more composure and dignity than *asseverate*, which is to *assert* excitedly. In legal usage, *affirm* has a general agreement with *depose* and *testify*; it differs from *swear* in not invoking the name of God. See ALLEGE; ASSERT; ASSURE; AVER.—Ant.: contradict, deny, dispute, gainsay, negative, oppose.—**af-firm'a-bl(e²**, *a.* Capable of being affirmed.—**-a-bly**, *adv.*—**af-firm'ance**, *n.* 1. Affirmation. 2. *Law.* Ratification; confirmation.—**af-firm'ant. I.** *a.* Affirming. **II.** *n.* An affirmer; in law, one who testifies under judicial affirmation instead of formal oath.—**af-firm'er**, *n.*—**af-firm'ing-ly**, *adv.*

af"fir-ma'tion, 1 af'ər-mē'shən; 2 ăf'er-mā'shon, *n.* 1. The act of asserting or declaring anything to be true; especially, affirmative assertion as opposed to negative; assertion.

All our *affirmations* are only in concrete. LOCKE *Essays, Human Understanding* vol. ii, ch. 8, p. 11. [H. 1818.]

2. That which is affirmed; an averment. 3. *Logic.* An affirmative judgment or proposition; a predication. 4. *Law.* A solemn declaration made, by one conscientiously opposed to taking a judicial oath, before a magistrate or other officer competent to administer an oath, that he will testify truthfully, under the pains and penalties of perjury for testifying falsely. 5. The confirmation of anything established; ratification; as, the *affirmation* of laws. [OF., < L. *affirmatio(n-)*, < *affirmo*; see AFFIRM, *v.*]

af-firm'a-tive, } 1 a-fūrm'ə-tiv; 2 ă-firm'a-tiv, *a.* 1.
af-firm'a-tiv², } Marked by affirmation; asserting that a fact is so; answering "yes" to a question at issue; as, an *affirmative* vote.

Our philosophy is *affirmative*, and readily accepts the testimony of negative facts. EMERSON *Essays* 1st ser., p. 122. [T. & F. 1865.]

2. That gives assent or affirmation; ratifying; confirmative. 3. *Logic.* Expressing the agreement of the terms of a proposition; not containing a negative particle; not negative; as, an *affirmative* proposition. 4. *Math.* Positive; affected with the plus sign; as, an *affirmative* quantity. [< F. *affirmatif*, < L. *affirmativus*, < *affirmo*; see AFFIRM, *v.*] **af-firm'a-to-ry†.**—**af-firm'a-tiv(e-ly²**, *adv.*

af-firm'a-tive, *n.* 1. That which affirms or asserts; a statement in which anything is affirmed; an expression of affirmation or assent; as, a decided *affirmative*.

In grammar two negatives make an *affirmative*.
ALDRICH *Prudence Palfrey* ch. 16, p. 257. [H. M. & CO. 1890.]

2. That side in a debate which affirms the proposition debated. 3. *Law.* That side on which rests the burden of proof. 4. *Logic.* An affirmative mood, proposition, or word. 5. *Naut.* A signal-flag to indicate an affirmative answer to a previous signal. 6†. An affirmation.

af-firmd', *pp.* Affirmed. S. S.

af-firm'ing, 1 a-fūrm'ıŋ; 2 ă-firm'ing, *n.* Affirmation.

af-fix', 1 a-fiks'; 2 ă-fiks', *v.* **I.** *t.* To fix or attach; fasten; join; append; as, to *affix* one's signature; he *affixed* his seal to the deed; to *affix* a syllable to a word. **II.** *i.* [Rare.] To be attached; attach; adhere; cling. [< LL. *affixo*, freq. of L. *affigo*, < *ad*, to, + *figo*, fasten.]

Syn.: see ADD; ATTACH.—Prep.: *to*.—**af-fix'er**, *n.*—**af-fix'ment**, *n.* Same as ATTACHMENT.

af'fix, 1 af'iks; 2 ăf'ĭks, *n.* 1. That which is attached, appended, or added. (1) *Gram.* A syllable, letter, or letters added as prefix or suffix to a word, stem, or verbal root, to form a new word: a frequent process in word-formation, as in *af-fix, bold-ness, rami-fy, child-hood, ante-diluvian, un-natural*, etc. (2) *Art.* Any small, separate, decorative feature wrought upon fictile ware, bronzes, etc. 2. *Math.* Either of two symbols representing respectively a point and the complex number whose elements are the coordinates of that point. When $x = A + B\sqrt{-1}$, x is the *affix* of the point A, B, and vice versa.—**af'fix-al**, *a.* [Rare.] Having the characteristics of an affix.—**af-fix'ture**, *n.* [Rare.] The act of fastening to, or state of being fastened to; also, that which is affixed. **af"fix-a'tion†; af-fix'ion‡.**

af-flat', *pp.* Affixed. S. S.

af-flate'†, *vt.* To blow or breathe on; inspire.

af-flat'ed, 1 ə-flēt'ed; 2 a-flāt'ĕd, *pa.* Breathed upon; inspired. [< L. *afflatus*, pp. of *affio*; see AFFLATUS.]—**af-fla'tion**, *n.* A breathing on, toward, or into; inspiration.

af-fla'tus, 1 a-flē'tus; 2 ă-flā'tŭs, *n.* 1. An exaltation of soul under divine influence; inspiration.

Over his church the *afflatus* passed.
WHITTIER *The Preacher* st. 7.

2. An elevating and controlling or overmastering natural impulse; as, poetic *afflatus*.

A great deep soul, with the *afflatus* and mysterious tide of vision and impulse rushing on him he knows not whence.
CARLYLE *Heroes and Hero-Worship* lect. i, p. 22. [C. & H. 1859.]

3. *Med.* (1) A baneful blast of air. (2) Belching. (3) A type of erysipelas, so named from its suddenness. 4. [Rare.] A breathing or hissing. [L., < *affio*, blow on, < *ad*, to, + *flo*, blow.]

af"fleu"ré', 1 a'flū"rē'; 2 ă'flū"re', *a.* [F.] *Decor. Art.* Made even or flush with the surface; not projecting: noting a medallion, mosaic, or other inlaid ornament.

af-flict', 1 a-flikt'; 2 ă-flĭct', *vt.* 1. To distress physically or mentally; oppress with suffering; trouble grievously; distress; as, to *afflict* a land with plagues.

It is with ruins, as it is with monuments; in the midst of a great city, in the dirt of our streets, they *afflict* and grieve the heart. LAMARTINE *Travels, etc.* tr. by R. Huish *July 19, 1832* p. 46. [WRI.]

2†. To cast down; humble. [< L. *afflicto*, freq. of *affligo*, < *ad*, to, + *figo*, strike down.]—**af-flict'†. I.** *a.* Afflicted. **II.** *n.* Conflict.—**af-flict'er**, *n.* One who afflicts.—**af-flict'ing-ly**, *adv.* In a distressing manner; afflictively.

af-flict'ed, 1 a-flikt'ed; 2 ă-flĭct'ĕd, *pa.* Distressed in body or mind; filled with or suffering affliction.

Hear, Father, hear thy faint *afflicted* flock
Cry to thee. BRYANT *Hymn of the Waldenses* st. 1.

The furnace of *affliction* produces refinement in States.
J. T. PECK *Great Republic* period ii, ch. 5, p. 271. [S. & W. 1868.]

2. That which causes great suffering or distress; grief; calamity.

Where in the shadow of a great *affliction*, The soul sits dumb!
WHITTIER *To my Friend, On the Death of his Sister* st. 6.

3. The act of sorely distressing; especially, self-inflicted religious discipline; mortification. 4. *Astrol.* A planet unfortunately situated in the horoscope. [< F. *affliction*, < L. *afflictio(n-)*, < *affligo*; see AFFLICT, *v.*] **af-flict'ed-ness‡.**—**af-flic'tion-less**, *a.*

Syn.: chastening, trial, tribulation. These words have all an especially religious bearing, suggesting some disciplinary purpose of God, with beneficent design. *Affliction* may be keen and bitter, but brief; *tribulation* is long and wearing. We speak of an *affliction*, but rarely of a *tribulation*, since *tribulation* is viewed as a continuous process, which may endure for years or for a lifetime; but we speak of our daily *trials*. See ADVERSITY.—Ant.: alleviation, assuagement, comfort, consolation, relief.

af-flic'tive, } 1 a-flik'tiv; 2 ă-flĭc'tiv, *a.* Causing or in-
af-flic'tive, } volving pain or distress; troublesome; grievous. [< LL. *afflictivus*, < L. *affligo*; see AFFLICT, *v.*]
—**af-flic'tiv(e-ly²**, *adv.*

af-flue'†, *v.* To flow toward; assemble; flock.

af'flu-ence, 1 af'lū-ens; 2 ăf'lu-ençe, *n.* 1. A profuse or abundant supply, especially of riches; wealth; as, to live in *affluence*.

O precious hours! O golden prime
And *affluence* of love and time!
LONGFELLOW *Old Clock on the Stairs* st. 6.

2. A flowing toward; concourse; as, the *affluence* of blood to the heart. **af'flu-en-cy†; af'flu-ent-ness‡.**

Syn.: abundance, opulence, plenty, riches, wealth. We may speak of *affluence* of thought or language, but the word in common use signifies *abundance* of material goods, accompanied with generous expenditure. We could not speak of a miser as living in *affluence*, tho we might speak of his hoarded *wealth* or his useless *riches*.—Ant.: indigence, penury, poverty, scarcity want.

af'flu-ent, 1 af'lu-ent; 2 ăf'lụ-ĕnt. **I.** *a.* **1.** Having or furnishing an abundance; abounding, especially in wealth; rich; as, an *affluent* merchant.

He on whom . . . *affluent* Fortune emptied all her horn.
TENNYSON *Death of Wellington* st. 8.

2. Having a free course; flowing readily; fluent; as, *affluent* speech; *affluent* streams. 3†. Flowing toward any point. **II.** *n.* A tributary stream. [F., < L. *affluent(-)s*, ppr. of *affluo*, < *ad*, to, + *fluo*, flow.]—**-ly,** *adv.*

af'flux, 1 af'lŭks; 2 ăf'lŭks, *n.* **1.** The act of flowing, or that which flows, toward a point; especially, in medicine, a flow of bodily fluids or humors to a part. **2.** Any coming together or collection, as of clouds.

The *afflux* of purchasers has much more than doubled.
Pall Mall Gazette Aug. 10, 1872. [M.]

2†. To compel; force; ravish. **3†.** To exert (oneself). [< OF. *afforcer;* see AFFORCEMENT.]

af-force'ment, 1 ə-fōrs'mənt or -mənt; 2 ă-fôrç'mənt, *n.* **1.** The act of afforcing. **2.** A fortress. [OF., < *afforcer*, var. of *efforcer*, < LL. *exfortio*, < L. *ex*, out, + *fortis*, strong.] **af-for'ci-a-ment†.**

af-ford', 1 ə-fôrd'; 2 ă-fôrd', *vt.* **1.** To have sufficient means for; be able to meet the expense of without detriment to one's estate; sustain; bear; stand: used generally with *can, could, might*, etc.; as, he can *afford* the expense.

It would be more rational to talk about not *affording* seed corn than to talk about not *affording* our children as much of their time as is necessary for their education.
EVERETT *Orations, Education* in vol. ii. p. 228. (L. B. & CO. 1850.]

2. Hence, to incur without serious detriment; endure with advantage or triumph; as, he could *afford* to die.

The evil cannot brook delay, The good can well *afford* to wait.
WHITTIER *Lines to Friends Under Arrest* st. 5.

3. To produce, yield, or furnish, as fruit, profit, result, or the like; as, the earth *affords* an abundance. **4.** To further or accomplish, as an enterprise. [< AS. *geforthian*, < *ge-* (becoming *af-*, as if < L. *ad*) intens. + *forthian*, further, promote, < *forth;* see FORTH.]

Syn.: see ENDURE; SUPPLY.—**af-ford'a-bl(eᴾ,** *a.*—**af-ford'ment†,** *n.* A grant; bestowal.

af-for'est, 1 ə-fər'est; 2 ă-fŏr'ĕst, *vt.* **1.** To permit or cause (a forest) to grow upon treeless land. **2.** *Eng. Hist.* To convert into a forest; declare subject to forest laws. The hair of the *affrighted* pedagogue rose upon his head with terror. IRVING *Sketch-Book, Sleepy Hollow* p. 449. [G. P. P. & CO. 1861.]

af-front', } 1 ə-frunt'; 2 ă-frŏnt', *vt.* **1.** To insult openly

af-frunt'ᵣ, } or to the face; treat with insolence or indignity; slight intentionally; offend by word or act.

His majesty would never have been so grossly *affronted* abroad if he had not first been *affronted* at home.
MACAULAY *England* vol. ii, ch. 25, p. 1161. [W. T. A. 1881.]

2. To put to the blush; make ashamed or confused; as, to *affront* the family feeling. **3.** [Archaic.] To meet face to face; confront; accost; also, to oppose or assault.

Let us *affront* and reprimand the smooth mediocrity . . . of the times. EMERSON *Essays* first series, p. 61. [H. M. & CO. 1887.]

4. To front in position; face; look toward. [< F. *affronter*, < LL. *affronto*, < L. *ad*, to, + *fron(t-)s*, front.]

Syn.: aggravate, annoy, displease, exasperate, insult, irritate, offend, provoke, tease, vex, wound. One may be *annoyed* by the well-meaning awkwardness of a servant, *irritated* by a tight shoe or a thoughtless remark, *vexed* at some careless neglect or needless misfortune, *wounded* by the ingratitude of child or friend. To *tease* is to give some slight and perhaps playful annoyance. *Aggravate* in the sense of *offend* is colloquial. To *provoke*, literally to call out or challenge, is to begin a contest; one *provokes* another to violence. To *affront* is to offer some defiant offense or indignity, as it were, to one's face; it is somewhat less than to *insult*. See PIQUE.—Ant.: conciliate, content, gratify, honor, please.

—**af-front'ed-ly,** *adv.* [Rare.] With effrontery; insultingly.—**af-front'ed-ness,** *n.* The state of being affronted; also, impudence.—**af-front-ee',** *n.* One who receives an affront.—**af-front'er,** *n.* **1.** One who affronts. **2†.** An impudent pretender.—**af-front'ing-ly,** *adv.* So as to affront; insultingly.—**af-front'ing-ness,** *n.* The quality that gives affront; an insulting manner or spirit.

Table of African Tribes.

The following table presents the principal ethnological groups of African tribes and their localities, as made known to science through the investigations of explorers. The names of stocks are printed in full-face type, as **Bantu**; the names of important tribes are printed in small capitals, as Bechuana, and treated more fully in vocabulary place; and those of their branches, as Barolong, are printed in Roman type and indented.

It is impossible to give a complete list of the tribes inhabiting Africa, owing to the fact that the country is not fully explored. Even where the names of the tribes are known their ethnic relations are still a matter of uncertainty in many localities.

[1] Recently a connection has been traced between the Bushmen and the Pigmies.

[2] Of the primitive pygmy negroid stock the Hottentots, once considered the parent family, are now regarded as an offshoot of mixed Bantu-Bushman blood . . . . Evidence has been produced of the presence of a belated Hottentot or Hottentot-Bushman group . . . between Kilimanjaro and Victoria Nyanza. *Encyc. Brit.* 11th ed., vol. iv, p. 871.

LOWELL *Among my Books* first series, p. 160. [O. & CO. 1870.]

a-gainst', 1 ə-genst'; 2 a-gĕnst', *prep.* **1.** In opposition to. (1) In action: Into contact or collision with; in movement toward; as, the ship dashed *against* the rocks.

The rising tide bears *against* the rushing torrent up stream.
LONGFELLOW *Hyperion* bk. i, ch. 8, p. 60. [J. B. A. 1883.]

(2) In character, spirit, disposition, or purpose: Not in conformity to; opposite or contrary to; in hostility to; as, to act *against* conscience; this is *against* custom.

Nature is always *against* a liar.
ARTHUR HELPS *Friends in Council* vol. i, ch. 1, p. 21. [J. M.]

(3) In position: (*a*) In contact with; pressing upon; as, to lean *against* a wall. (*b*) Opposite to; in contrast with; as, *against* the background of the sky.

And Jesus sat over *against* the treasury. *Mark* xii, 41.

2. In resistance to; in protection from; adversely concerning; as, to warn *against* a plot. **3.** In preparation for; in readiness for: followed sometimes by a substantive clause; as, food laid up *against* a day of want; get ready *against* visitors come. Sometimes improperly regarded as a conjunctive use. **4.** In exchange for; as a set-off, or partial set-off, to; as, to take live stock *against* wheat. **5.** To the debit of; as a charge upon; as, items entered *against* a customer; to draw *against* a credit balance. **6.** (1) Near the time of. (2) Coming toward (to meet). (3) In the sight of; in view of. [ME. *against*, < *again* (< AS. *ongegn*; see AGAIN) + *-s* (adv., orig. gen. ending) + intens. *-t*.] — **against the grain**, **a. the hair**, counter to the natural bent or feelings.

If a child has any particular bent, it was given to it, and it's going *against the grain* . . . to try to bend it some other way. HOWELLS *Hazard of New Fortunes* vol. ii, ch. 13, p. 286. [H. 1890.]

— **a. time.** **1.** With the intention of coming within a certain time: with the purpose of beating an established record; as, the horse runs *against time*. **2.** For the purpose of consuming or gaining time; as, the senator was talking *against time*.— **to run a. 1.** To meet accidentally. **2.** To be an opposing candidate, as for office.

FIGUIER *World before the Deluge* trans., p. 340. [A.]

The *agglomeration* which bore the name of Squire Hawkins.
EGGLESTON *Hoosier School-Master* ch. 4, p. 43. [S. 1873.]

ag-glom'er-a-tĭve, } 1 -ə-tıv; 2 -a-tĭv, *a.* Tending to ag-
ag-glom'er-a-tĭvs, } glomerate.

ag-glu'tĭ-na-ble, } 1 a-glū'tı-nə-bl; 2 ă-glų'tĭ-na-bl, *a.*
ag-glu'tĭ-na-bl", } Capable of being joined by adhesion.

— **agglutinable substance** (*Bacteriol.*), that part of a bacterial organism, or a red blood-corpuscle, with which the agglutinin unites when agglutination occurs.— **ag-glu'tĭ-na-bĭl'ĭ-ty,** *n.*

ag-glu'tĭ-nant, 1 a-glū'tı-nənt; 2 ă-glų'tĭ-nant. **I.** *a.* Tending to cause adhesion; uniting. **II.** *n.* **1.** Any sticky substance that causes adhesion. **2.** A remedy deemed capable of uniting divided parts by adhesion. **3.** *Bacteriol.* Agglutinin. [< L. *agglutinan(t-)s,* ppr. of *agglutino;* see AGGLUTINATE, *a.*]

ag-glu'tĭ-nate, 1 a-glū'tı-nēt; 2 ă-glų'tĭ-nāt, *v.* [-NAT'ED; -NAT'ING.] **I.** *t.* **1.** To unite, or cause to stick together, as with glue; join by adhesion; combine without change of form; as, *agglutinated* sand forms sandstone.

The newspaper had *agglutinated* the titles of two of its predecessors. HOWELLS *Indian Summer* ch. 1, p. 4. [T. & F. 1886.]

No *agglutinating* language has ever become monosyllabic.
FELTON *Greece* vol. i, course i, lect. ii, p. 30. [T. & F. 1867.]

2. To convert into glue or a viscous substance. **3.** *Bacteriol.* To produce a clustering or fusion of, as of red blood-corpuscles or bacteria. **II.** *i.* To become glue or gluey.— **agglutinating substance** (*Bacteriol.*), agglutinin.

ag-glu'tĭ-nate, *a.* **1.** Joined as with glue or a viscous substance: literally and figuratively. **2.** *Philol.* (1) Somewhat agglutinative. (2) Agglutinative. [< L. *agglutino,* pp. *agglutinatus,* < *ad,* to, + *gluten;* see GLUE.]

ag-glu"tĭ-na'tion, 1 a-glū"tı-nē'shən; 2 ă-glų"tĭ-nā'shon, *n.* **1.** A sticking together; the state of being united; adhesion of distinct parts; also, the mass which is thus united. **2.** *Gram.* That mode of compounding, in etymology, in which neither the form nor signification of the radical words is changed; a loose combination. **3.** as in *steamboat, locksmith.* Compare INFLECTION. **3.** *Philol.* That process of combination in which the word-elements are so united as to retain their separate identity as modificatory syllables, and usually something of their significative power as independent words.

The most characteristic feature of the Turanian languages is what has been called *Agglutination,* or 'gluing together.'
MÜLLER *Science of Lang.* 1st ser., lect. viii, p. 291. [S. 1875.]

4. *Bacteriol.* The massing together of bacteria or the red corpuscles of the blood when subjected to agglutinins. See AGGLUTININ. **5.** *Psychol.* (1) An intimate association of ideas, the process being conceived of under the misleading analogy of the passive adherence to one another of physical particles. (2) The simplest form of apperceptive combination: used by Wundt. BALDWIN *Dict.* **6.** *Med.* The process by which separate parts are united, as in the healing of wounds.— **agglutination test,** a microscopic test employed in serum diagnosis for the identification of bacteria. It is usually effected by mixing bacteria of the suspected variety with diluted blood-serum from an infected animal and observing whether the former become agglutinated, and, in the case of ciliated cells, lose their motility. The test depends upon the principle that specific agglutinins are developed in the blood-serum of affected animals which cause the specific bacteria involved to coalesce into clumps. **Widal reaction‡.— ag-glu"tĭ-na'tion-ist,** *n. Philol.* One who holds the theory that languages have been formed by agglutination.

ag-glu'tĭ-na-tĭve, } 1 a-glū'tı-nə-tıv; 2 ă-glų'tĭ-na-tĭv, *a.*
ag-glu'tĭ-na-tĭvs, } **1.** Tending to produce adhesion; pertaining to agglutination; having power to unite. **2.** *Philol.* Resulting from or characterized by agglutination: distinguished from *inflectional.*

The simply *agglutinative,* or nomadic stage of grammar.
MAX MÜLLER *Chips* vol. ii, ch. 16, p. 18. [S. 1873.]

— **agglutinative languages,** languages characterized by the formative process of agglutination.— **a. reaction** (*Bacteriol.*), same as AGGLUTINATION, 4.

ag-glu'tĭ-na-tor, 1 a-glū'tı-nē"tər; 2 ă-glų'tĭ-nā"tŏr, *n.* One who or that which agglutinates; specif., agglutinin, as opposed to an agglutinable substance. See AGGLUTINABLE.

ag-glu'tĭ-nin, 1 a-glū'tı-nin; 2 ă-glų'tĭ-nĭn, *n. Bacteriol.* A chemical product of the process of immunization, arising in blood-serum and causing the red corpuscles, or any bacteria with which it is brought into contact, to coalesce into floccules. It may arise (1) from the ciliated part of motile cells (**flagellara.**), or (2) from the body of the cells (**somatic a.**), and both kinds may thus be produced and may coexist in a given serum.

ag-glu'tĭ-no-gen, 1 a-glū'tı-no-jen; 2 ă-glų'tĭ-no-ĝĕn, *n. Physiol. Chem.* A constituent of bacteria which when used for immunization causes the development of agglutinins.— **ag-glu"tĭ-no-gen'ĭc,** *a.* Relating to agglutinins

or their production.—**ag-glu″ti-nog′e-nous**, *a.* **1.** Generating agglutinins. **2.** Causing agglutination.

ag-glu′ti-noid, 1 a-glū′tı-neid; 2 ă-glu′ti-nŏid, *n.* An agglutinin deprived of the zymophore group through degeneration or destruction, tho still possessed of the haptophore or combining group.

ag-glu′ti-no-phore, 1 a-glū′ti-no-fōr; 2 ă-glu′ti-no-fōr, *n.* A complex of molecules in an agglutinin, which is presumably the cause of their power of agglutination.—**ag-glu″ti-no-phor′ic**, *a.* [—**ag-grace′**†, *n.* Grace.

ag-grace′†, *rt.* **1.** To add grace to. **2.** To favor. **a-grace′**†.

ag″gra-da′tion, 1 ag′rə-dē′shən; 2 ăg′ra-dā′shon, *n. Geol.* **1.** The natural filling up of the bed of a watercourse at any point of weakening of the current, by deposition of detritus. **2.** Specif., the building up by streams, in arid regions, of fan-like graded plains, by the shifting of streams and the loss of the water in the dry soil: contrasted with *degradation*, which always precedes it.

The waste plains of arid lands, on the other hand, are regions of *aggradation*. W. D. JOHNSON *21st Annual Rep. U. S. Geol. Survey* pt. iv, p. 620. [GOV. PTG. OFF. '01.]

[< L. *ad-* + GRADATION.]—**aggradation plain** (*Geol.*), a topographic plain built up by aggradation in arid districts. It begins by the building up of the hollowed bed of a stream, at the foot of a declivity, forming a plain with a nearly straight longitudinal profile, which may become a very broad plain of deposition.

The last addition to an *aggradation plain* should exhibit the coarsest material. W. D. JOHNSON *21st Annual Rep. U. S. Geol. Survey* pt. iv, p. 636. [GOV. PTG. OFF. '01.]

—**ag″gra-da′tion-al**, *a.* **1.** Of, relating to, or caused by aggradation. **2.** Producing aggradation.

ag-grade′, 1 a-grēd′; 2 ă-grād′, *rt.* [-GRAD′ED; -GRAD′ING.] *Phys. Geog.* To add to: opposed to *degrade*; as, the bed of a river is *aggraded* when silt is deposited on it. [< AG- + GRADE.]

ag′gran-dize, 1 ag′rən-daiz; 2 ăg′ran-dīz, *v.* [-DIZED; -DIZ′ING.] **I.** *t.* **1.** To make great or greater; increase or intensify; exalt in honor, wealth, influence, or power.

The first act of Herod, after Augustus had *aggrandized* him. . . ; was to build a temple. GEIKIE *Life of Christ* vol. i, p. 51. [A. 1880.]

2. To cause to appear greater; give grandeur to; widen the scope of; as, Christianity has *aggrandized* the epic.

II. *i.* [Rare.] To become greater. [< F. *agrandir*, < L. *ad*, to, + *grandis*, great.] **ag′gran-dise**‡.—**ag′gran-diz″a-bl(eᴿ)**, *a.* **ag′gran-dis″a-bl(eᴿ)**‡.—**ag′gran-diz″er**, *n.*

ag″gran-dize′ment, 1 ag′rən-daiz′ment *or* -mənt; 2 ăg″ran-dīz′ment (XIII), *n.* **1.** The act of aggrandizing, or the state of being aggrandized; exaltation or increase in honor or power; as, "personal *aggrandizement*." MCCOSH *Emotions* bk. iii, p. 23. [s. 1870.] **2.** Increase in size; enlargement. [< F. *agrandissement*, < *agrandir*; see AGGRANDIZE.] **ag″gran-dise′ment**‡; **ag-gran″di-za′tion**‡.

ag-grate′†, *rt.* **1.** To please. **2.** To thank.

ag′gra-vate, 1 ag′rə-vēt; 2 ăg′ra-vāt, *rt.* [-VAT′ED; -VAT′ING.] **1.** To add weight or intensity to; make heavier, worse, or more burdensome; also, to make more heinous; increase the guilt of; as, sickness *aggravates* the ills of poverty.

The fulness of their knowledge *aggravated* the perversity of their ignorance. FARRAR *Early Days of Christ.* p. 127. [F. & W.]

2. [Colloq.] To provoke greatly; exasperate; annoy; as, he *aggravates* me beyond measure: an erroneous use perhaps from confusion with *aggrieve*. **3.** To increase inflammation in; irritate; as, to *aggravate* a wound. **4.** [Rare.] To exaggerate; as, to *aggravate* details. **5**†. To burden, as with a weight or with accusation. [< L. *aggravatus*, pp. of *aggravo*, < *ad*, to, + *gravis*, heavy.]

SYN.: enhance, heighten, increase, intensify, magnify, make worse. To *aggravate* is etymologically to increase in weight, hence in gravity, severity, or intensity. A disease or other evil may be *aggravated*, but not a person. *Enhance* and *magnify* are oftenest used in the lofty and good sense; as, to *enhance* the glory of God; "I *magnify* mine office." *Rom.* xi, 13. *Aggravate* is used always in the bad sense, to *make worse* what is already bad; as, to *aggravate* a fever or an enmity. See AFFRONT; INCREASE.—ANT.: alleviate, assuage, attenuate, diminish, lessen, palliate, reduce, soften. —**ag′gra-va″tor**, *n.*

ag′gra-vate†, *a.* Burdened or weighed down; made more serious, as a crime.

ag′gra-vat″ing, 1 ag′rə-vēt′ıŋ; 2 ăg′ra-vāt′ing, *pa.* **1.** [Colloq.] Provoking or fitted to provoke; exasperating; irritating. **2.** Making more intense, burdensome, heinous, etc.—**ag′gra-vat″ing-ly**, *adv.*

ag″gra-va′tion, 1 ag′rə-vē′shən; 2 ăg′ra-vā′shon, *n.* **1.** The act of aggravating, or the state of being aggravated; a making, or the fact of being made, heavier or more heinous, as a crime, offense, misfortune, etc. **2.** Originally, an enhancing circumstance; in law, some extrinsic circumstance considered as increasing the atrocity of a crime.

Weigh'd
By itself, with *aggravations* not surcharg'd,
Or else with just allowance counterpois'd.
MILTON *Samson Agonistes* l. 769.

3. [Colloq.] (1) The act of provoking; exasperation; annoyance; teasing. (2) Irritation; inflammation. **4.** [Rare.] Exaggeration. **5**†. *R. C. Canon Law.* The censure following a third admonition; the curse denounced against an obstinate offender. **6**†. A charge; accusation.

ag′gra-va″tive, } 1 ag′rə-vē′tıv; 2 ăg′ra-vā′tiv. **I.** *a.* Of, **ag′gra-va″tiv**‡, } pertaining to, or tending toward aggravation. **II.** *n.* Anything causing aggravation.

ag′gre-gant, 1 ag′rı-gənt; 2 ăg′re-ġant, *n.* One of the constituents or particulars that make up an aggregate, or sum total.

ag′gre-gate, 1 ag′rı-gēt; 2 ăg′re-ġāt, *v.* [-GAT′ED; -GAT′ING.] **I.** *t.* **1.** To bring together, as into one place, mass, sum, or body; collect; mass; as, population and wealth are *aggregated* in cities. **2.** To make as a sum or whole; amount to, as in number, weight, or the like; as, the ships *aggregate* 5,000 tons. **3.** [Rare.] To add as a constituent part or member; unite to (rarely *with*) a body or association; as, Paul was *aggregated* to the twelve in the apostolic body.

II. *i.* To form a mass or collection.—**ag″gre-ga′tor**, *n.*

ag′gre-gate, *a.* Collected into a sum, mass, or total; gathered into a whole; also, formed by a collection of individuals; collective. (1) *Bot.* Agglomerate; collected together: said of (*a*) a flower like the teasel, consisting of a mass of small flowers gathered in a head, or (*b*) of a fruit like the raspberry, made up of distinct carpels of a single flower massed together. (2) *Anat.* Formed into clusters; as, *aggregate* glands. (3) *Geol.* Composed of distinct minerals separable by mechanical means, as granite. (4) *Zool.* Compound: said of animals in which several individuals are united into a common organized mass or cœcium, as in tunicates. (5) *Logic.* Held by more than one person; as, **aggregate meaning**, a form of common or catholic opinion or thought. See COMMUNITY. [< L. *aggrego*, pp. *aggregatus*, < *ad*, to, + *grex* (*greg-*), flock.]—**corporation aggregate**, a body politic consisting of many individuals united in one association and kept up by succession of members, as a city corporation.—**ag′gre-gate-ly**, *adv.*—**ag′gre-gate-ness**, *n.*

ag′gre-gate, *n.* **1.** The entire number, sum, mass, or quantity of something; amount; complete whole; as, the *aggregate* of all virtues; wealth in the *aggregate*.

A nation is but the *aggregate* of . . . individuals. FROUDE *Short Studies, Progress* in second series, p. 258. [s. 1872.]

The public happiness is to be the *aggregate* of the happiness of individuals. WEBSTER *Works* vol. i, p. 190. [L. B. & CO. 1864.]

2. *Mil.* The combined force of enlisted men and officers in a command. **3.** *Building.* Material for making concrete. **4.** An assembly or mass of individuals or items; a collection; an aggregation; specif., a rock formed of a collection of minerals. **5.** *Math.* The totality of all points or numbers satisfying a given condition; as, the *aggregate* of functions. An aggregate in which all points are limiting points, that is, within even an infinitesimal distance of each of which are found an infinite number of points of the aggregate, is termed a **dense aggregate**. If all the limiting points are points of the aggregate it is called a **perfect aggregate**. **Aggregates of the same power** are those which are susceptible of being brought into one-to-one correspondence. An **enumerable aggregate** is one which has the same power as the aggregate of natural numbers.

SYN.: agglomeration, aggregation, amount, collection, entirety, mass, sum, total, totality, whole. An *aggregate* of financial items is an *amount*, *sum*, or *total*. An *aggregate* of material objects is a *collection*, *mass*, or *whole*; an *agglomeration* is a heterogeneous *mass*. *Collection* points rather to the differences, *mass* to the unity. We say a *collection* of *minerals*, a *mass of rock*. The result of multiplication is a product, the result of addition a *sum*, *total*, or *aggregate*.—**social aggregate**, a group of beings carrying on a social existence by living or working together.

ag″gre-ga′tion, 1 ag′rı-gē′shən; 2 ăg′re-ġā′shon, *n.* **1.** The act of aggregating, or the state of being aggregated; collection or assemblage into one whole or mass; aggregate condition.

Our stellar universe . . . shows varieties of structure and of *aggregation* corresponding with . . . those which we recognize in the solar system. PROCTOR *Expanse of Heaven* p. 274. [A. 1874.]

There is among our population a tendency towards *aggregation*, which concentrates the strain upon our social and political fabric. STRONG *Our Country* ch. 4, p. 44. [S. & T. CO. 1885.]

2. *Logic.* The combination of species into a genus, or of terms into a general term whose truth is assured by that of any one or all of its parts. **3.** That which is combined into a whole; a collection or mass, as of like particles; an aggregate.—**aggregation theory**, a theory that matter progresses from an imperceptible to a perceptible state by means of aggregation.—**biologic a.**, the theory that a complex organism, such as one of the *Metazoa*, is the result of the aggregation of independent organisms represented by the structural units (as metameres) now morphologically separable. **organic a.**‡.—**genetic a.** (*Sociol.*), a group of kinsmen who have spent their lives in one locality: also, a population persisting by births, rather than by the inclusion of aliens.—**law of a.**, the tendency everywhere apparent of all material things, whether great or small, to group themselves.—**primary a.** (*Physics*), the process resulting in the present condition of inorganic matter; grouping of atoms into molecules and masses.—**secondary a.** (*Biol.*), the process resulting in the present condition of organisms; the grouping of biomolecules into living cells and organisms.—**tertiary a.** (*Sociol.*), the process resulting in the social grouping of individuals, as the gathering into populations.

ag″gre-ga′tive, } 1 ag′rı-gē′tıv; 2 ăg″re-ġā′tiv, *a.* **1.** Of, **ag″gre-ga′tiv**‡, } pertaining to, or tending to aggregation; collective. **2.** [Rare.] Associative; social; gregarious.

ag-grege′†, *v.* To aggravate: exaggerate. **ag-gredge′**†.

ag-gress′, 1 ə-gres′; 2 ă-ġrĕs′, *v.* **I.** *i.* To make the first attack; commit an *aggression*; also, to *encroach*; intrude. **II.** *t.* [Rare.] To encroach upon the rights of: attack; assault. [< F. *aggresser*, < LL. *aggresso*, freq. of L. *aggredior*, approach, < *ad*, to, + *gradior*, walk.]

ag-gres′sion, 1 a-greśh′ən; 2 ă-ġrĕsh′on, *n.* An unprovoked attack; unwarranted inroad or encroachment upon the rights of another, whether prompted by hostility or not; also, the committing of such attacks or encroachments.

Nations have seemed to court *aggression* and bondage. CHANNING *Works, Napoleon Bonaparte* p. 523. [A. U. A. 1883.]

[F., < L. *aggressio(n-)*, < *aggredior*; see AGGRESS, *v.*] **ag-gress′**†.

SYN.: assault, attack, encroachment, incursion, intrusion, invasion, onslaught, trespass. An *attack* may be by word; an *aggression* is always by deed. An *assault* may be upon the person, an *aggression* is upon rights, possessions, etc. An *invasion* of a nation's territories is an act of *aggression*; an *intrusion* upon a neighboring estate is a *trespass*. *Onslaught* signifies intensely violent *assault*, as by an army or a desperado, tho it is sometimes used of violent speech. —ANT.: defense, repulsion, resistance, retreat.—PREP.: *upon* (sometimes *on*).—**ag-gres′sion-ist**, *n.*

ag-gres′sive, } 1 ag-gres′ıv; 2 ă-ġrĕs′iv, *a.* **1.** Disposed to **ag-gres′siv**‡, } commit aggressions; also, disposed to work actively in behalf of one's interest; as, an *aggressive* man or nation. **2.** Characterized by aggression; as, *aggressive* conduct.—**-ly**, *adv.*—**-ness**, *n.*

Enthusiasm is only powerful and active so long as it is *aggressive*. LOWELL *Among my Books* p. 232. [O. & CO. 1873.]

ag-gres′sor, 1 a-gres′ar *or* -ər; 2 ă-ġrĕs′or, *n.* One who commits an aggression; especially, the contestant who begins a quarrel. [L., < *aggredior*; see AGGRESS, *v.*]

ag-grest′, *pp.* Aggressed. S. S.

ag′gri-bead″, 1 ag′rı-bīd″; 2 ăg′ri-bēd″, *n.* [Afr.] A colored glass bead, like the adder-stone of the Britons, exhumed in Africa: thought to be of Egyptian origin. **ag′gry-bead″**‡.

ag-griev′ance, 1 a-griv′əns; 2 ă-ġrēv′anċ, *n.* **1.** [Archaic.] The act of aggrieving; oppression. See GRIEVANCE. **2**†. Aggravation. **ag-grieve′ment**‡.

ag-grieve′, } 1 a-griv′; 2 ă-ġrēv′, *v.* [-GRIEVED′; -GRIEV′-**ag-griev′**, } ING.] **I.** *t.* To give grief or sorrow to; bear heavily upon; give cause for just complaint; afflict; oppress: as, to *aggrieve* the unfortunate: generally in the passive.

There was scarcely a family in the realm that did not feel itself *aggrieved* by the oppression and extortion which this abuse naturally caused. MACAULAY *England* vol. i, ch. 1, p. 47. [H. 1872.]

II†. *i.* To feel grief; lament. [< OF. *agrever*, < L. *aggravo*; see AGGRAVATE, *v.*]

ag-grieved′, } 1 a-grivd′; 2 ă-ġrēvd′, *pa.* **1.** Subjected **ag-griev′d**, } to ill treatment; made to feel injury or injustice. **2.** *Law.* Prejudiced in rights of person or property by the judgment or decision of a court; as, a right of appeal given to the party *aggrieved* by a judgment.—**ag-grieved′ness**, *n.*

ag-group′, 1 a-grūp′; 2 ă-ġrup′, *rt.* To form or arrange in a group; group. [< F. *agrouper*, < *à* (< L. *ad*), to, + *grouper*; see GROUP, *v.*]—**ag-group′ment**, *n.*

ag′gur, 1 ag′ər; 2 ăġ′ur, *n.* The agallochum. [< Hind. *agur.*]

a′gha!, 1 ā′gə; 2 ā′ġă, *n.* [Turk.] Same as AGA.

a-gha′‡, 1 ə-gū′; 2 ă-ġā′, *n.* [Pers.] Literally, lord or master: used as a term of address, as the English *mister*.

A-ghan′, 1 ə-gun′; 2 ă-ġun′, *n.* [Hind.] A month of the Hindu calendar. See CALENDAR.

a-gha′nee, 1 ə-gā′nī; 2 a-ġā′nē, *n.* [Hind.] The second and principal rice-crop of Hindustan. **u-ghu′nee**‡.

a-ghast′, } 1 ə-gast′; 2 a-ġăst′, *a.* Struck with terror **a-gast′**‡, } and amazement; dumb and gaping with horror: predicative or appositive.

All stood and stared *aghast*—shocked, and yet fascinated—at so strange a spectacle. HAGGARD *She* ch. 19, p. 165. [O. & CO.]

Too long, at clash of arms amid her bowers
. . . the earth has stood *aghast*. BRYANT *After a Tempest* st. 6.

[ME. *agast*, pp. of *agasten*, terrify, < AS. A-, away, + *gæstan*, terrify.]—**a-ghast′ness**, *n.*

Agh′la-bites, 1 ag′lə-bəits; 2 ăġ′la-bits, *n. pl.* An Arab dynasty whose members flourished in northern Africa from the 8th to the 9th century and were followed by the Fatimites. **Ag′la-bides**‡; **Ag′la-bites**‡.

A-gho′ra, 1 ə-gō′rə; 2 ă-ġō′ra, *n.* One of a Sivaite Hindu sect, given to the practise of obscene rites: now almost extinct. [Hind., unclean.] **A-gho′ri**‡.

A′ghrim, 1 ē′grim; 2 a′ġrim, *n.* A parish in Galway county, Ireland, where William III. of England defeated James II. in 1691.

A′gi-a, 1 ē′gi-ə; 2 ă′ġi-a, *n. Bib.* (Apocrypha). *1 Esd.* v, 34.

ag″i-a-ste′ri-um, 1 aj′ı-ə-stī′rı-um; 2 ăġ″i-a-stē′ri-ŭm, *n. Arch.* A sanctuary, especially that part of a basilica in which the altar was set up. STURGIS *Dict. Arch.* [< Gr. *hagiastērion*, < *hagios*, holy.]

A′gib, 1 ē′gib; 2 ă′ġib, *n.* In *The Arabian Nights*, a calender, in the story of *The Three Calenders*, who lost his right eye as a punishment for curiosity.

ag′i-blet, *a.* Practicable; feasible.

ag′le-la-wood″, 1 ag′ı-lə-wud″; 2 ăġ′i-la-wōod″, *n.* Eaglewood. [< Sp. *aguila*, eagle, + WOOD.]

ag′ile, } 1 aj′ıl; 2 ăġ′il, *a.* Able to move or act quickly, **ag′il**‡, } physically or mentally; active; nimble; brisk: when used of the mind often implying trickiness; as, an *agile* animal; an *agile* reasoner. [F., < L. *agilis*, < *ago*, do.] SYN.: see ACTIVE; NIMBLE.—**-ly**, *adv.*—**-ness**, *n.*

a-gil′i-ty, 1 ə-jil′ı-tı; 2 a-ġil′i-ty, *n.* **1.** The quality of being agile; quickness and readiness in movement; nimbleness; activity: said of body or mind.

The Indians could thread their labyrinths with the *agility* of a deer. IRVING *Sketch-Book, Philip of Pokanoket* p. 201. [H. & CO.]

2†. Operative force. [CER *P. T.*

a-gilt′†, *rt.* & *ri.* To wrong; sin against. **a-gilte′**†. CHAU-

A″gin″court′, 1 ə″ǰaŋ′kūr′; 2 ă″zhăñ′cur′, *n.* A village in Pas-de-Calais department, France, where Henry V. of England defeated the French, Oct. 25, 1415.

ag′ing, 1 ēj′ıŋ; 2 āġ′ing, *n.* **1.** The process of making or becoming old, or of causing to appear old. See AGE, *v.* **2.** The curing or maturing of logwood by exposure to the air, thus developing the coloring-matter hematein, as a result of the oxidation of hematoxylin. **3.** *Elec.* The property of iron shown by increased loss of hysteresis on long exposure to alternating magnetization, particularly at a higher temperature. **age′ing**‡. —**ag′ing-ma-chine″**, *n.* A machine used in printing calico for procuring a uniform dissolving and distribution of the mordant on the fiber, during the aging process.—**a.-room**, *n.* A hot and humid room in which cloth is aged as in calico-printing.

ag′i-o, 1 aj′ı-ō *or* ē′jı-ō; 2 ăġ′i-ō *or* ā′ġi-ō, *n.* [-OS, 1 -ōz; 2 -ōs, *pl.*] **1.** The premium payable for the exchange of one kind or quality of money or currency into another; exchange premium. **2.** An allowance for depreciation of coin by wear. **3.** [Rare.] The business of a broker or money-changer; brokerage. [< It. *aggio*, exchange, < *agio*, = EASE.]

ag″i-o-sy-man′dron, 1 aj′ı-o-si-man′drən; 2 ăġ′i-o-sy-măn′dron, *n.* A bar of wood or metal struck, as with a hammer: used by Christians in Mohammedan countries for a bell. [< Gr. *hagios*, holy, + *sēmantron*, sign, < *sēmainō*, give a signal.] **ag″i-o-sy-man′drum**‡.

ag-nos'tic, *n. Philos.* One who holds the theory of

If the *agnostic*, with reference to the fundamental beliefs and reasoned conclusions of this larger experience, avows not only the maxim 'I-do-not-now-know,' but also 'You-do-not-know,' and 'Nobody knows, or ever will know, or from the nature of things can know'; then he is no longer agnostic, but has become the most conceited and irrational of dogmatists. G. T. LADD *Knowledge, Life, and Reality* ch. 7, p. 147. [D. M. & CO. '09.]

Most of my colleagues [in the Metaphysical Society] were 'ists,' . . . and I, the man without a rag of a label, . . . took thought and invented what I conceived to be the appropriate title of 'Agnostic.' It came into my head as suggestively antithetic to the 'gnostic' of Church history, who professed to know so much about the very things of which I was ignorant. HUXLEY *Essays upon some Controverted Questions* ch. 9, p. 276. [A. 1892.]

The *agnostics* call God unknowable, but that He is unfathomable is all they prove and often all that they mean.
JOSEPH COOK *Biology* lect. i, p. 10. [o. & co. 1877.]

Syn.: see SKEPTIC.

ag-nos'ti-cism, 1 ag-nos'tı-sizm, ag-nos'tıks; 2 ăg-nŏs'ti-çĭsm, ăg-nŏs'tics, *n.* **1.** In general, the doctrine of nescience, or the theory which maintains that man can not have, or at least has not, any real or extra-mentally valid knowledge, but can know only "impressions."

I meet the ideal skepticism, or rather *agnosticism*, so far as it relates to the external world, by maintaining that, by the senses, . . . we perceive things appearing, not merely qualities, but qualities of self, of self in such or such a state.
MCCOSH *Psychology, Cognitive Powers* bk. i, p. 74. [s. 1886.]

2. Specif.: (1) *Philos.* The theory that first truths, substance, cause, especially the human soul and a First Cause, can neither be proved nor disproved, and must remain unknown or unknowable; nescience: opposed to *dogmatic skepticism*. Compare GNOSIOLOGY.

As held by some moderns (apparently by Hamilton and Mansel), this theory affirms that the mind has limitations that disqualify it for knowing real existence, etc., and confine it to phenomena; as held by others (as Hume and Spencer), it pronounces all actual or possible evidences of such knowledge unsatisfactory and insufficient. The ancient acataleptics taught that knowledge never amounts to certainty, but only to probability, mainly because things themselves are essentially incomprehensible; the modern agnostics — whose doctrine originated in Hume's theory of "impressions" and Kant's theory of knowledge — lay special stress on the weakness and limitations of man's faculties. Compare ACATALEPSY.

Agnosticism is in short a theory of the nature and limits of human intelligence. It is that particular theory which questions or denies the capacity of human intelligence to attain assured knowledge, whether with respect to all spheres of truth or, in its religious application, with respect to the particular sphere of religious truth. BENJ. B. WARFIELD in *New S.-H. Relig. Encyc.* vol. i, p. 88. [r. & w. co. '08.]

(2) *Theol.* The theory that God is unknown or unknowable. This theory has (*a*) a positive form, maintaining either that finite mind can not know the Infinite and Absolute Being, or that God, being absolute, can not come into relation to finite beings, and therefore can not reveal himself to man; and (*b*) a negative form, maintaining that man does not know God, and God has not revealed himself to man — this last opposed to *dogmatic theism*.

As more satisfactory than these able expositions and defenses, we see *Agnostics* working its proper effects and forming character. MCCOSH *Conflicts of the Age* p. 37. [s. 1851.]

(3) In loose usage, the view that all supernatural beings or existences, all spiritual verities, etc., are unknowable, or at least incomprehensible.

The genuine and sincere *agnosticism* is the meekness of those content with the unfoldings of a real life.
H. M. ALDEN *God in His World* intro., p. 14. [H. 1890.]

SYN.: ache, anguish, distress, pain, pang, paroxysm, suffering, throe, torment, torture. *Pain, suffering,* and *distress* are general terms, applied either to body or mind. The prick of a needle causes *pain,* but we should scarcely speak of it as *suffering. Distress* is too strong a word for little hurts, too feeble for the intensest *suffering,* but commonly applied to some continuous or prolonged trouble or need; as, the *distress* of a shipwrecked crew, or of a destitute family. *Ache* is lingering pain, more or less severe; *pang,* a *pain* short, sharp, intense, and perhaps repeated. We speak of the *pangs* of hunger or of remorse. *Throe* is a violent and thrilling *pain. Paroxysm* applies to an alternately recurring and receding *pain,* which comes as it were in waves; the *paroxysm* is the rising of the wave. *Torment* and *torture* are intense and terrible *sufferings. Agony* and *anguish* express the uttermost *pain* or *suffering* of body or mind. *Agony* of body is that with which the system struggles; *anguish* that by which it is crushed.— ANT.: comfort, delight, ease, enjoyment, peace, rapture, relief, solace.— **agony column** [Colloq., Eng.], a column of a newspaper in which personal notices are printed.— **to pile on the a.** [Colloq.], to do or say as much as possible for sensational effect.

Syn.: cultivation, culture, farming, floriculture, gardening, horticulture, husbandry, kitchen-gardening, market-gardening, tillage. *Agriculture* is the generic term, including at once the science, the art, and the process of supplying human wants by raising the products of the soil, and by the associated industries; *farming* is the practise of *agriculture* as a business; there may be theoretical *agriculture,* but not theoretical *farming;* we speak of the science of *agriculture,* the business of *farming;* scientific *agriculture* may be wholly in books; scientific *farming* is practised upon the land; we say an agricultural college, rather than a college of *farming.*

Agriculture.— An Allegory from the Campanile of Giotto, Florence.

Farming refers to the *cultivation* of considerable portions of land, and the raising of the coarser crops; *gardening* is the close *cultivation* of a small area for small fruits, flowers, vegetables, etc., and while it may be done upon a farm is yet a distinct industry. *Gardening* in general, *kitchen-gardening,* the *cultivation* of vegetables, etc., for the household, *market-gardening,* the raising of the same for sale, *floriculture,* the *culture* of flowers and *horticulture,* the *culture* of fruits, flowers, or vegetables, are all departments of *agriculture,* but not strictly nor ordinarily of *farming; farming* is itself one department of *agriculture. Husbandry* is a general word for any form of practical *agriculture,* but is now chiefly poetical. *Tillage* refers directly to the work bestowed upon the land, as plowing, manuring, etc.; *cultivation* refers especially to the processes that bring forward the crop: we speak of the *tillage* of the soil, the *cultivation* of corn; we speak also of land as in a state of *cultivation,* under *cultivation,* etc. *Culture* is now applied to the careful development of any product to a state of perfection, especially by care through successive generations; the choice varieties of the strawberry have been produced by wise and patient *culture;* a good crop in any year is the result of good *cultivation.*

2. To promote the success of; seek to push or help forward; assist; help on; as, to *aid* a business enterprise. **3.** *Law.* To correct or cure, as a defect in a pleading or process, by a subsequent step in an action that precludes the consideration of such defect.

II. *i.* To help; assist; as, I will *aid.* [< F. *aider,* < L. *adjuto,* freq. of *adjuvo,* < *ad,* to, + *juro,* help.]

Syn.: abet, assist, befriend, cooperate, encourage, foster, help, promote, succor, support, sustain, uphold. *Help* expresses greater dependence and deeper need than *aid.* In extremity we say "God *help* me!" rather than "God *aid* me!" In time of danger we cry "*help! help!*" rather than "*aid! aid!*" To *aid* is to second another's own exertions. We can speak of *helping* the helpless, but not of *aiding* them. *Help* includes *aid,* but *aid* may fall short of the meaning of *help.* In law to *aid* or *abet* makes one a principal. (Compare synonyms for ACCESSORY.) To *cooperate* is to *aid* as an equal; to *assist* implies a subordinate and secondary relation. One *assists* a fallen friend to rise; he *cooperates* with him in helping others. *Encourage* refers to mental aid, as *uphold* now usually does; *succor* and *support,* oftenest to material assistance. We *encourage* the timid or despondent, *succor* the endangered, *support* the weak, *uphold* those who else might be shaken or cast down. See ABET; PROMOTE; SERVE.— Ant.: counteract, discourage, oppose, resist, thwart, withstand.— Prep.: aid *in* an enterprise, aid *with* money, aid *to* success, aid *against* the enemy.

— **to aid and abet,** to give assistance in or to; as, to *aid and abet* a crime or a criminal.— **aid'a-bl(eP, *a.*— aid'er, *n.***

There is much that is called spiritual *ailment* that is nothing but stomachic *ailment.* H. W. BEECHER *Lectures to Young Men* lect. viii, p. 269. [T. & F. 1868.]

Syn.: see DISEASE; ILLNESS.

ai-lo'lo, 1 ăi-lō'lo; 2 ĭ-lō'lo, *n.* [Hawaii.] A religious ceremony at which a hog is offered in sacrifice and a part of it eaten, as by persons entering certain professions. [puffin.

all'sa-cock", 1 ēl'za-kek"; 2 āl'sə-cŏk", *n.* [Local, Scot.] The

All'sa Craig, 1 ēl'sə krēg; 2 āl'sa crāg. A basaltic islet in the Firth of Clyde, Scotland.

Al-lu'ri-dæ, etc. Same as ÆLURIDÆ, etc.

al"lu-ro-pho'bi-a, *n.* Same as ÆLUROPHOBIA.

all'weed", 1 ēl'wĭd"; 2 āl'wēd", *n.* Same as CLOVER-DODDER.

aim, 1 ēm; 2 ām, *v.* **I.** *t.* **1.** To direct, as a missile, blow, etc., with the purpose of hitting some specified object or part of an object; also, to direct (a weapon) with the eye, before its discharge; point or level; as, to *aim* a gun at a mark. **2.** To direct toward or against, as any word, act, or proceeding; as, to *aim* a remark at any one.

There's no weapon that slays
Its victim so surely (if well *aimed*) as praise.
OWEN MEREDITH *Lucile* pt. ii, can. 1, st. 20.

3†. To estimate; conjecture; devise.

II. *i.* **1.** To direct a missile or point a weapon at or toward anything. **2.** To have a purpose; make something one's object; endeavor earnestly; as, one should *aim* to succeed; ambition *aims* high: usually with *at* or an infinitive.

What Dr. Arnold mainly *aimed* at, was to promote the self-development of the young minds committed to his charge.
SMILES *Brief Biographies, Arnold* p. 74. [T. & F. 1861.]

3. [Colloq., U. S.] To intend; as, she *aims* to go to-morrow: common in the Tennessee mountain regions. **4†.** To make an estimate; form a guess. [< OF. *esmer,* < L. *æstimo,* estimate.] PREP.: *at.*— **aim'er,** *n.*

aim, *a.* [Prov. Eng.] **1.** Divisible by 2 without remainder; even; not odd: applied to numbers. **2.** Being in a straight line; short; direct; figuratively, related by blood; akin.

aim, *n.* **1.** The act of aiming, directing, or pointing a weapon, missile, remark, etc., at anything; as, the mist interfered with his *aim.* **2.** The line of direction of anything aimed; as, the *aim* was correct.

Success will be found in a quiet singleness of justly chosen *aim.*
RUSKIN *Modern Painters* vol. v, pt. viii, ch. 3, p. 190. [W. & S. 1860.]

3. The object or point aimed at or to be aimed at; a mark or target; as, to miss one's *aim.* **4.** That which is intended; design; purpose; as, a noble *aim.*

A common error is that it may be allowable for a man to live a life of idleness, having no work and no *aim.*
D. S. GREGORY *Christian Ethics* pt. ii, p. 222. [S. & B. 1875.]

5†. Conjecture.

Syn.: aspiration, design, determination, end, endeavor, goal, inclination, intent, intention, mark, object, purpose, tendency. The *aim* is the direction in which one shoots, or sometimes that which is aimed at. The *mark* is that at which one shoots; the *goal,* that toward which one runs. All alike indicate the direction of *endeavor.* The *end* is the point at which one would close his labors; the *object,* that which he would grasp as the reward of his labors. *Aspiration, design, endeavor, purpose,* referring to the mental acts by which the *aim* is attained, are often used as interchangeable with *aim. Aspiration* applies to what are viewed as noble *aims; endeavor, design, intention, purpose,* indifferently to the best or worst. *Aspiration* has less of decision than the other terms; one may aspire to an object, and yet lack the fixedness of *purpose* by which alone it can be attained. *Purpose* is stronger than *intention. Design* especially denotes the adaptation of means to an end; *endeavor* refers to the exertions by which it is to be attained. One whose *aims* are worthy, whose *aspirations* are high, whose *designs* are wise, and whose *purposes* are steadfast, may hope to reach the *goal* of his ambition, and will surely win some object worthy of a life's *endeavor.* See AMBITION; DESIGN; DIRECTION; DRIFT; PURPOSE.— Ant.: aimlessness, avoidance, carelessness, heedlessness, neglect, negligence, oversight, purposelessness, thoughtlessness.

—aim'ser"er†, *n.* One who cried "aim" to archers; hence, an encourager.— **aim'-frontlet,** *n.* A wooden sight fitted to the muzzle of a cannon: rarely used.— **to give aim,** in archery, to stand near the target to tell the archers where their arrows fall.— **aim'ful,** *a.* Full of purpose.— **aim'fully,** *adv.* [Rare.] With definite purpose.

Ai'mak, 1 ăi'mak; 2 ĭ'măk, *n.* **1.** A legislative branch of the Mongol people that controlled the government. **2.** A division consisting of four nomadic tribes in the country north of Herat and Kabul, Afghanistan: 250,000 in number.

ai-ma'ra, 1 ăi-mā'rə; 2 ĭ-mä'ra, *n.* The trahira.

Ai"mard', 1 ĕ"mär'; 2 ă"mär', **Gustave** (⁹/₁₁1818–⁶/₁₁ 1883). A French story-writer and traveler.

almd, *pp.* Aimed. S. S.

A. I. M. E., *abbr.* American Institute of Mining Engineers; Associate of the Institution of Mechanical Engineers; Associate of the Institution of Mining Engineers.

aim'less, 1 ēm'les; 2 ām'lĕs, *a.* Wanting in aim or purpose.— **aim'less-ly,** *adv.*— **aim'less-ness,** *n.*

Reading ought not to be *aimless,* even though its aim be to while away an hour. PORTER *Books and Reading* p. 31. [S. 1873.]

Aim'well, 1 ēm'wĕl; 2 ām'wĕl, *n.* A decayed gentleman, one of the two beaux in Farquhar's *The Beaux' Stratagem.*

aim'wor"thy, 1 ēm'wûr'thi; 2 ām'wûr'thy, *a.* Worthy to be made an end or aim; as, an *aimworthy* purpose.— **aim'wor"thi-ness,** *n.* Excellence of aim; also, the quality of being aimworthy.

These worthy fellows waited, . . . trusting in God for *aimworthiness.* BLACKMORE *Lorna Doone* ch. 54, p. 390. [H.]

ain, 1 ēn; 2 ān, *a.* [Scot.] Own.

a'in', 1 ă'yin; 2 ä'yin, *n.* The 16th Hebrew letter, having originally a sharp guttural and a vibrating palatal sound — both peculiar to the Semitic. See ALPHABET. [Heb. *'ayin,* < Ar. *'ain,* orig. eye.] **a'yin†.**

A'in', 1 ĕ'in; 2 ĭ'in, *n. Bib.* A city in Palestine. *Josh.* xv, 32. [Heb., an eye; a spring or fountain.]

Ain', 1 ăn; 2 ăn, *n.* **1.** A river in France; length, 118 m.; Jura mountains to the Rhône. **2.** A department in France; 2,239 sq. m.; 1,600 artificial lakes, used for fish-breeding and grain-cultivation; capital, Bourg-en-Bresse.

Al-nad', 1 ăl-năd'; 2 ĭ-năd', *n.* A district and town in Hadramaut, Arabia.

al'na-lite, 1 ăl'ne-lait; 2 ĭ'na-lit, *n. Mineral.* A variety of cassiterite containing tantalum pentoxid. [< Gr. *aïnos,* fire, + *lithos,* stone.]

ai"nĕ', 1 ĕ'nĕ'; 2 ĭ'ne', *a.* [F.] [AINÉE, *fem.*] Elder; advanced in years: sometimes combined with proper names; as, Dumas *aîné.*

al'nent, 1 ĕ'nent; 2 ĭ'nĕnt, *a.* [Rare.] *Her.* Running, as animals.

ain'hum, 1 ēn'hum; 2 ăn'hŭm, *n. Pathol.* A chronic disease that results in the dropping off of the little toes: said to be peculiar to the negro race.

Ain'mül-ler, 1 ain'mül-ər; 2 in'mül-er, **Maximilian Emanuel** (³/₁₁1807–¹²/₁₁1870). A German painter on glass.

Ainn'le, 1 an'li; 2 ăn'li, *n.* In Irish heroic legend, the second son of Usnach, brother to Naeise. See DEIRDRE, NAEISE, and SONS OF USNACH. **Ainn'li†.**

Al'no, 1 ai'no; 2 ĭ'no, *n.* One of a people found as uncivilized tribal communities in northern Japan and a few adjacent islands: often called the aborigines of the country; also, their language, unclassed, and but faintly resembling Japanese. They are of medium size, darker than the Japanese, the men wearing full beards. They worship the sun, moon, sea, etc., but believe also in an invisible spirit and in an evil principle.— **Al'no,** *a.*

The full beard is found among the *Ainos,* of whose hairy bodies so much has been said. The most trustworthy observers assure us that except in a few isolated cases the hairiness is not greater than in Europeans, but that it is always to be seen on the breast and legs — a fact that ranks as a curiosity.
GERLAND in *Iconographic Encyc.* vol. i, p. 262.

ain-sel'', 1 ēn-sel'; 2 ān-sĕl', *n.* [Scot.] Own self. **ain-sell't,**

Ains'lie, 1 ēnz'li; 2 ānz'li, **Hew** (⁴/₁₁1792–³/₁₁1878). A Scottish poet in America, author of *A Pilgrimage to the Land of Burns* (1820).

A'in-Soph", 1 ă'yin-sōf'; 2 ĭ'yin-sōf', *n.* [Heb.] *Occult.* A being infinite, boundless, absolutely self-identical, but without attributes. [< Heb. without end.]

The primary cause and governor of the world is the *Ain-Soph,* who is both immanent and transcendent.
Kabbala Denudata tr. by Mathers, intro., p. 38. [G. R. 1887.]

Ains'worth, 1 ēnz'wûrth; 2 ānz'wûrth, *n.* **1. Henry** (1571–1623?), an English scholar and controversialist. **2. Robert** (⁹/₁₀1660–⁴/₁1743), an English scholar; *Lat. Dict.* **3. William Harrison** (²/₁1805–¹/₁1882), an English novelist; *The Tower of London,* etc.

ain't, 1 ēnt; 2 ānt. [Colloq.] Am not; are not: always inelegant; also, an illiterate ungrammatical form for the contractions *isn't, hasn't,* and *haven't:* a vulgarism. **an't†.**

Ain-tab', 1 ain-tăb'; 2 in-täb', *n.* A city in Syria, Turkey; an American mission station.

Al'nu, 1 ăl'nū; 2 ĭ'nu, *n.* See AINO.

A.·. Inv.·., *abbr. Freemasonry. Anno Inventionis* (in the year of the discovery).

Ai-o'li-an, Ai-ol'ic. Same as EOLIAN, etc.

Ai'o-lis, Ai'o-los, *n.* [Gr.] Same as ÆOLIS.

Ai"o-lo-bran"chi-a'ta, 1 ĕ"o-lo-brau"ki-ē'tə; 2 ă"o-lo-brăn"ci-ē'ta, *n. pl. Conch.* A suborder of nudibranchiate gastropods with variable gills, including all except the *Anthobranchiata.* [< Gr. *aiolos,* quick-moving, + *branchia,* gills.]

ai-phy'ti-um, 1 ai-fai'ti-um; 2 ĭ-fy'ti-ŭm, *n. Ecol.* An ultimate formation; the last stage of a succession.

a"ĭ-pim', 1 ă"ĭ-pim'; 2 ä"i-pim', *n.* [Braz.] *Bot.* The sweet cassava: probably a Tupian name.

air, 1 âr; 2 âr, *v.* **I.** *t.* **1.** To expose to the air, especially to outdoor air; admit air into; purify or dry by exposing to the air; ventilate; as, to *air* a room. **2.** To expose to heat; as, to *air* clothing or liquors. **3.** To make public; show off; display; as, to *air* theories.

II. *i.* [Archaic.] To take the air, as in the street or park.

air²†, *vt.* To set to music; compose an air for.

air¹, *n.* **1.** (1) The mixture of gases that forms the apparent blue envelop of the earth. (2) The atmosphere.

Air consists chiefly of the gases oxygen and nitrogen very nearly in the proportions one to four. Recently it has been found to contain newly discovered gaseous elements nearly allied chemically to nitrogen, which have been named argon, neon, krypton, and xenon; also helium, long known spectroscopically as a constituent of the solar atmosphere and now believed to be a product of the disintegration of radium. These substances exist only as traces, with the exception of argon, which forms nearly 1 per cent. of the atmosphere by volume. There are also numerous impurities such as ammonia, sulfurous acid, etc. Carbonic dioxid, which is present in greater or less quantities, generally about .03 of 1 per cent., is usually regarded as a normal constituent.

2. The open space around and above the earth; as, a flaming sword hung in the *air;* to emerge into the *air.*

And all the *air* a solemn stillness holds. GRAY *Elegy* st. 2.

3. An atmospheric movement or current; wind; breeze: frequently in the plural; as, the gentle *airs* fanned his cheeks. **4.** Utterance abroad; publicity; as, the rumor has taken *air.* **5.** Any gas; especially, gas arising from combustion or the like, as from furnaces in iron-works. **6.** *Paint.* The representation of atmospheric perspective. **7.** *Liturg.* The nephele. **8.** Figuratively, something light and ethereal; wind; as, all *air* and no sense. **9†.** Breath; hence, information; intelligence. [F., < L. *aër,* < Gr. *aēr,* < *aēmi,* breathe.]

airet; ayret.— **air'-bag",** *n.* **1.** An inflated bag used to raise or buoy up a sinking or sunken vessel. **2.** In a pneumatic molding-machine, a device consisting of air-filled bags, which give the proper pressure to the sand; also, any device composed of air-filled bags for exerting a uniform pressure, as in printing-frames, bookbinders' case-making machines, etc. **3.** [Slang.] A shallow, loquacious person.— **air-ball,** *n.* A ball inflated with air, used for a toy.— **air-barometer,** *n.* A device for recording slight oscillations, as in the level of well-water by recording changes of air-pressure.— **air-base,** *n.* A place or region used as a basis of operation for aeroplanes.— **air-beat,** *n. Acoustics.* A single pulsation of air such as one felt mechanically from a vibrating object in which the waves are of extremely low frequency.— **air-bell,** *n.* **1.** *Zooph.* A roundish or pear-shaped organ acting probably as a gas-secreting gland for the swim-bladder in *Auronectæ;* an aurophore. **2.** An air-globule, as a bubble formed in glass-making or in developing photographs; air-bladder.— **air-billow,** *n.* A prolonged and moderate atmospheric wave; specif., an air-wave originating between two horizontal air-strata of varying velocity and direction.— **air-bladder,** *n.* **1.** A sac filled with air, the homolog of a lung, generally situated under the anterior part of the spinal column of fishes, aiding them to maintain an equilibrium in the water; the sound. **2.** Any vesicle filled with air, as in seaweed, glass, iron-castings, etc.— **air-blast,** *n.* An air-current (1) forced upon a fire to stimulate combustion, etc.; (2) directed on a dynamo-commutator to prevent sparking, or (3) impinged upon surfaces for polishing and abrading.— **air-boat,** *n.* A hydroaeroplane.— **air-bone,** *n.* A bone filled with air, as in birds.— **air-bottle,** *n.* A portable metallic container for compressed air, used as for inflating automobile tires.— **air-bound,** *a.* Prevented by the presence of air from acting: said of suction-pipes and sewage-pipes.— **air-box,** *n.* **1.** The conduit through which air for heating rooms is supplied to a furnace. See illus. under FURNACE. **2.** An air-compartment of a life-boat. **3.** A flue to convey fresh air into a mine.— **air-brake,** *n.* See BRAKE.— **air-brush,** *n.* An implement for spraying liquid color by compressed air.— **air-bucket,** *n.* A water-wheel bucket so arranged that the air may escape without interference with the entering water.— **air-bug,** *n.* Any true bug living in the open air and not in water; a land-bug.— **air-built,** *a.* Baseless; chimerical.— **air-casing,** *n.* A casing with an air-space between it and the object enclosed, to prevent too great transmission or radiation of heat.— **air-castle,** *n.* A visionary project or scheme; a day-dream.— **air-cataract,** *n.* An apparatus for lessening the impact of a moving object suddenly stopped, in which the air acts as a cushion, and lessens the force of impact.— **air-cavity,** *n.* Any cavity containing air, as the air-sacs in birds.— **air-cell,** *n.* **1.** *Zool.* A cavity for the reception of air. Specifically: (1) One of the minute compartments lining the alveolar passages and air-sacs of the lungs; an alveolus. (2) An air-sac of a bird. (3) A dilatation of the air-vessels or tracheæ of an insect. **2.** *Bot.* A cell or cavity filled with air, in various parts of the tissues of plants.— **air-chamber,** *n.* A chamber or enclosed space containing air; as, (1) to preserve buoyancy, as in a life-boat; (2) to serve as a cushion, as in a force-pump (see illus. under FORCE-PUMP); (3) to receive air from a water-pipe; (4) an air-cell; (5) a compartment between the septa of various chambered *Cephalopoda,* as the nautilus; a camera; loculus.— **air-chambered,** *a.*— **air-channel,** *n.* **1.** A channel through which air passes. **2.** *pl.* Channels in the masonry of walls and fire-bridges and beneath the hearths of reverberatory furnaces, intended to preheat the air admitted and to prevent injury to the foundations from the great heat of the furnace.— **air-cock,** *n.* A faucet used to control the passage of air.— **air-compartment,** *n.* An air-tight part, as of a shaft, for ventilating a mine.— **air-cone,** *n.* In a marine engine, a cone to receive air and steam from the hot-well.— **air-cooled,** *a.*— **air-cooling,** *a.* Reducing the heat of the cylinder of a gasoline-engine, as in motor vehicles, by diffusing it over an enlarged surface through additional radiators and exposing it to a current of air.— **air-craft",** *n.* **1.** The science of aerial navigation. **2.** Aeroplanes and balloons collectively.— **air-crossing,** *n.* A place in a mine where one air-course runs over or under another one, or over or under the level or gang-road.— **air-cushion,** *n.* **1.** A bag inflated with air, specif., one used (1) as a pillow, or (2) in a water-pipe to lessen the water-hammer. **2.** An air-spring.— **air-cylinder,** *n.* **1.** A nearly air-tight cylinder having a piston playing in it: used to check the recoil of a gun. **2.** A cylinder beneath a railway-car, in which is compressed air which operates brakes.— **air-dew,** *n.* Manna.— **air-door,** *n.* A door for controlling air-currents in a mine.— **air-drain,** *n.* **1.** A channel around a foundation to promote dryness by allowing free circulation of air. **2.** A passage for the escape of gases from a mold while the molten metal is being poured in.— **air-drawn,** *a.* Drawn in the air; imaginary.— **air-dried,** *a.* Evaporated; dried in the air, as fruit.— **air-driven,** *a.* Driven by air, especially by compressed air.— **air-dry,** *a.* So thoroughly dry that no moisture is expelled upon exposure to the air.— **air-drying,** *n.* Drying in air by exposure, as woods, fruits, etc.— **air-duct,** *n.* **1.** A tube or passage conveying air. **2.** Specif., the duct connecting the air-bladder with the intestines, as in physostomous fishes.— **air-embolism,** *n. Pathol.* Embolism by bubbles of air in the veins.— **air-endway,** *n.* [Eng.] A passage made in a coal-seam for ventilation.— **air-float,** *n.* Same as AIR-BLADDER. **2.**— **air-floated,** *a.* Separated by an air-current: said of light substances, such as fine graphite.— **air-flue,** *n.* A small flue in a chimney through which to draw the foul air from a room.— **air-formed,** *a.* Made of or like the air.— **air-fountain,** *n.* A fountain which ejects water by means of compressed air.— **air-funnel,** *n.* **1.** A ventilating-flue formed by leaving out a timber from a vessel's frame or upper works above the water-line. **2.** *Zool.* The inferior part of the pneumatocyst of a free-swimming siphonophore in which the gas is secreted.— **air-gap,** *n.* **1.** The air-space between the armature and field in a dynamo or motor. **2.** Same as GAP, 2.— **air-gas,** *n.* Air mixed with hydrocarbon vapor: used for heating and as an illuminant.— **air-gossamer,** *n.* An air-thread.— **air-heading,** *n.* A smaller passage in a mine driven parallel with the gangway, and used for ventilating.— **air-jack,** *n.* A lifting-jack operated by compressed air and consisting of a vertical cylinder and a piston, the rod of which serves as a lifting-arm.— **air-jacket,** *vt.* To furnish with an air-jacket.— **air-jacket,** *n.* A garment, usually of rubber, inflated and used as a life-preserver.— **air-jig,** *n. Mining.* An apparatus which by means of currents of air separates minerals according to their specific gravity.— **air-leak,** *n. Elec.* The loss of charge sustained by an insulated substance because of the discharging action of the surrounding atmosphere.— **air-lift,** *n.* A pump in which the lifting power consists of air driven down an inner pipe to force water up an outer one.— **air-line,** *n.* **1.** The shortest distance between two points on the earth's surface. **2.** A direct railroad route.— **air-liquefier,** *n.* A device for changing air into liquid air, as by means of compression and cooling.— **air-lock,** *n.* **1.** An air-tight antechamber of a submarine caisson: for graduating the air-pressure. **2.** A stoppage of the flow of water in a pump caused by the presence of air.— **air-logged,** *a.* Impeded by the air, as a piston-head in a cylinder.— **air-loop,** *n.* A narrow window.— **air-machine,** *n.* A ventilating-machine for renewing the air, as in a mine.— **air-monger,** *n.* A visionary.— **air-passage,** *n. Bot.* An extended air-space between cells, as in stems of some water-plants.— **air-pillow,** *n.* See AIR-CUSHION.— **air-plane,** *n.* An aeroplane.— **air-plant,** *n.* A plant unconnected with the ground, growing on a tree or other object, but not parasitic and deriving its nourishment from the atmosphere: especially, an epiphytic orchid.— **air-plate,** *n.* A bored plate permitting only a given quantity of air to pass through; a perforated baffle-plate.— **air-plug,** *n. Naut.* A plug that can be removed from a water-tight manhole-plate or scuttle-cover into which it is screwed.— **air-pocket,** *n.* Same as POCKET, *n.*, 8.— **air-poise,** *n.* An instrument for weighing air.— **air-pore,** *n.* Same as STOMA.— **air-potato,** *n.* An East-Indian yam (*Dioscorea bulbifera*), a tall herbaceous climber cultivated as an oddity, bearing very large, angular axilla bulbs, edible like potatoes.— **air-pressure,** *n.* Atmospheric pressure.— **air-proof,** *a.* Impenetrable by air.— **air-propeller,** *n.* **1.** Any ventilating device that diffuses air, as a rotary fan. **2.** A device for supplying air, as to an iceboat, to aid in its propulsion.— **air-receiver,** *n.* A contrivance for equalizing the air-pressure in a furnace.— **air-receptacle** or **air-space,** *n.* A place for air; an air-sac in a bird.— **air-regenerator,** *n.* The regenerator which heats atmospheric air passing through it to a reheating or steel-melting furnace, coke-ovens, etc.— **air-register,** *n.* Same as REGISTER, 4.— **air-saller,** *n. Aero.* A glider.— **air-separator,** *n.* Any apparatus, as a dust-separator, utilizing air-power, as for the separation of minerals.— **air-setting,** *a.* Hardening by exposure to the air, as cement.— **air-sickness,** *n.* Same as

AERIAL SICKNESS.—**air'sinus**, *n.* One of the hollow spaces in the bones of the skull that communicate with the nasal passages.—**air'slaked**, *a.* Slaked by exposure to the air, as lime. See SLAKE. **air'slacked‡.—air'sollar**, *n.* See SOLLAR.—**air'speed**, *n. Aero.* Speed through the air, as of a flying-machine: distinguished from its speed before leaving the ground. See LAND-SPEED. LOUGHEED *Vehicles of the Air* p. 466. [R. & B. CO.' 10.]—**air'stirring**, *a.* Vibrating the air; thrilling, as music.—**air'stone**, *n.* A meteor. —**air'streams**, *n. pl.* Currents of air artificially produced and charged with smoke: used in determining the movements of air in encountering various obstacles.

His [Marcy's] method is to form a series of parallel *air-streams* within a large chamber, then to charge them with smoke. . . . When an obstacle is placed in their path the movement of the air is clearly distinguished. *Scientific American* Feb. 1, '02, p. 75.

—**air'tap**, *n.* A pet-cock for a series of hot-water pipes.—**air'thread**, *n.* A floating thread of spider's silk.—**air'threatening**, *a.* High-reaching; as, "*air-threatening* tops of cedars tall."—**air'tint**, *n. Paint.* An atmospheric modification of a tint.

The marvellous falls off and shades away into soft *air-tints*.
J. A. SYMONDS *Greek Poets* vol. i, ch. 4, p. 149. [H. 1880.]

—**air'trap**, *n.* **1.** Same as STENCH-TRAP. **2.** A small funnel to intercept air-bubbles, as in a barometer-tube.—**air'trunk**, *n.* A ventilating conduit, as in a public hall or theater.—**air'tumbler**, *n* A tumbler-pigeon.—**air'twist**, *n.* An air-bubble, as in the stem of a glass receptacle, that becomes a hollow spiral by twisting.—**air'twisted**, *a.*—**air'valve**, *n.* See VALVE.—**air'vesicle**, *n. Bot.* A bladder-like air-chamber serving as a float for many water-plants, as in certain sea-weeds.—**air'volcano**, *n. Phys. Geog.* A non-volcanic opening from which gas, mud, and stones are ejected.—**air'washer**, *n.* A device for clearing air of foreign substances by circulating it through water.—**air'washings**, *n. pl.* The atmospheric impurities remaining in a liquid through which air has been passed for purification.—**air'way"**, *n.* Any passageway for air; particularly, the ventilating passage of a mine.—**air'wood**, *n.* [Rare.] Wood dried in the air, *i. e.*, not kiln-dried.—**dephlogisticated air**, OXYGEN.—**fixed air**, carbon-dioxid gas.—**hot air** [Slang, U. S.], empty braggadocio; boastfulness.—**in the air. 1.** Insecure; unsupported; also, abroad; prevalent; as, the battery is *in the air;* changes are *in the air.* **2.** Without body or foundation in fact; undetermined; as, the project is as yet all *in the air.*—**to be or go up in the air** [Colloq., U. S.], to become excited; as, he *went up in the air* when told the cost.—**to beat the air**, to make vain or blind efforts.—**to take air**, to become public; as, the scandal is sure *to take air.*—**to take the air. 1.** *Falconry.* To try to rise above the falcon: said of a bird trying to escape. **2.** To go into the air. **3.** To make a trip in an airplane.

Air is used as the first element in self-explaining compound nouns naming: (1) Things containing air; as,

air-drum	air-holder	air-reservoir

(2) Things conveying air or permitting it to pass; as,

air-brick	air-grating	air-scuttle
air-bridge	air-hole	air-shaft
air-course	air-level	air-stack
air-exhaust	air-pipe	air-strainer
air-faucet	air-pit	air-strake
air-gate	air-port	air-tube

(3) Things operated by air, or using it as a motive fluid; as,

air-balloon	air-hoist	air-telegraph
air-drill	air-locomotive	air-thermometer
air-engine	air-pistol	air-whistle
air-hammer	air-spring	

(4) Things designed to distribute or move air, to regulate its flow, or to act on it; as,

air-carbureter	air-condenser	air-injector
air-compressor	air-governor	air-regulator

(5) Things used for measuring the humidity, purity, quantity, velocity, etc., of air; as,

air-gage	air-manometer	air-meter	air-tester

(6) Things in which air forms the principal or sole component or agent; as,

air-bath	air-cure	air-current

SAXE *Proud Miss McBride, Moral.*

[F., < It. *aire, aria,* < L. *aër,* atmosphere; see AIR[1], *n.*]

Syn.: appearance, bearing, behavior, carriage, demeanor, expression, fashion, look, manner, mien, port, sort, style, way. *Air* is that combination of qualities which makes the entire impression we receive in a person's presence; as, we say he has the *air* of a scholar, or the *air* of a villain. *Appearance* refers more to the dress and other externals. We might say of a travel-soiled pedestrian, he has the *appearance* of a tramp, but the *air* of a gentleman. *Expression* and *look* especially refer to the face. *Expression* is oftenest applied to that which is habitual; as, he has a pleasant *expression* of countenance; *look* may be momentary; as, he gave his comrade a significant *look*. We may, however, speak of the *look* or *looks* as indicating all that we look at; as, he had the *look* of an adventurer; I did not like his *looks*. *Bearing* is rather a lofty word; as, he has a noble *bearing; port* is practically identical in meaning with *bearing,* but is more exclusively a literary word. *Carriage,* too, is generally used in a good sense; as, the lady has a good *carriage. Mien* is closely synonymous with *air,* but less often used in a bad sense. We say a rakish *air,* rather than a rakish *mien. Mien* may be used to express some prevailing feeling as, "an indignant *mien*." *Demeanor* goes beyond *appearance,* including conduct, behavior; as, a modest *demeanor. Manner* and *style* are, in large part at least, acquired. See BEHAVIOR; MANNER; PRETENSE.—**to give oneself airs,** to assume affected manners of superiority.

They were finally (13th century) exterminated by the crusades and the Inquisition. **Al'bi-geois'‡.** — **Al"bi-gen'sian**, *a.* & *n.*

al'bin, 1 al'bin; 2 ăl'bin, *n. Mineral.* A white opaque partly decomposed apophyllite. **al'bine‡.**

Al-bi'nen, 1 al-bi'nen; 2 ăl-bĭ'nĕn, *n.* A village on a mountain, 4,000 ft. high, in the Valais canton, Switzerland, accessible only by ladders nearly perpendicular. **Ar-bi'gnon‡.**

al'bi-nism, *n.* The state or condition of being an albino; leucopathy or leucism. See ERYTHRISM; MELANISM. **al-bi'no-ism‡.**

Albinism, found in all parts of the world, is most prevalent in the Indian and negro races, and may be complete or partial. It is caused by the absence of the minute particles of coloring-matter which usually are present in the lowest and finally deposited layers of the epidermis, and whence the skin derives its color. The eyes are peculiarly affected. The iris is a pale-rose color, while the pupil is bright red, due to the absence of the *pigmentum nigrum*, the coloring-matter of the eye membrane, which serves to protect the retina; consequently, the vision of the albino is very defective in a strong light.

al"bi-nis'tic, *a.* Of or pertaining to albinism; affected with leucism or leucopathy. **al"bi-not'ic‡.**

Al-bin'i-us, 1 al-bin'i-us; 2 ăl-bĭn'ĭ-ŭs, *n.* A Roman tribune of the 5th century.

al-bi'no, 1 al-bai'no; 2 ăl-bī'no (XIII), *n.* [-NOS, 1 -noz; 2 -nōs, *pl.*] **1.** A person, animal, or plant exhibiting an abnormal congenital deficiency of coloring-matter; especially, a person with milky-white skin and hair and reddish eyes. **2.** An embossed impression taken without color from a die, as the uncolored proof of a stamp. **3.** [Mex.] An octoroon. [Pg., < *albo*, *alvo*, < L. *albus*, white.] — **al'bi-nal**, *a.* Marked by albinism. — **al"bi-nes'cent**, *a.* Tending toward albinism. — **al-bi'ness**, *n.* A female albino. — **al-bin'ic**, *a.* Characterized by albinism.

al"bi-nu'ri-a, 1 al'bi-niū'ri-ə; 2 ăl'bi-nū'rĭ-a, *n. Pathol.* Same as CHYLURIA. See ALBUMINURIA.

Al-bi'nus, *n.* **1.** 1 al-bi'nus; 2 ăl-bī'nus. **Bernard Siegfried** (2/11 1697–8/5 1770), German anatomist and surgeon.

2. 1 al-bai'nus; 2 ăl-bī'nŭs. **Decimus Clodius** (–197), a Roman general, once governor in Gaul. **3.** Any one of many Romans of the principal family of the Postumia gens.

Al'bi-on[1], 1 al'bi-ən; 2 ăl'bi-on, *n.* [Rare or Poet.] Great Britain: an ancient name once suggested by the white cliffs of the southern coast. [L., perhaps < Gael. *alp*, height.] — **Albion ware** (*Ceram.*), a ware with colored slip-decorations imitating a bygone English style.

al'bronze, 1 al'brənz; 2 ăl'brŏnz, *n.* A durable alloy of copper and aluminum. [Contraction of ALUMINUM BRONZE.]

al'bu-ca, 1 al-biū'kə; 2 ăl-bū'ca, *n. Bot.* A large genus of South-African bulbous herbs of the lily family (*Liliaceæ*), allied to *Ornithogalum*, cultivated for their yellowish flowers. [< L. *albucus*, a plant of the lily kind.]

Al"bu-e'ra, 1 ūl"bu-ē'ra; 2 ăl"bų-ę'rä, *n.* **1.** A town in Badajoz province, Spain, where the British, Spanish, and Portuguese defeated the French, May 16, 1811. **2.** A town in Leyte, P. I.

Al"bu-fe'ra, 1 ūl"bu-fē'ra; 2 ăl"bų-fę'rä, *n.* A seaport in [Portugal.

Al"bu-fe'ra, 1 ūl"bu-fē'rə; 2 ăl"bų-fę'ra, *n.* A lake in Valencia, Spain; area, 100 sq. m.

al"bu-gin'e-a, 1 al"biu-jin'i-ə; 2 ăl"bū-ġĭn'e-a, *n. Anat.* A white fibrous tissue enveloping certain organs, as the eye, the testicle, the ovary, and the spleen. [< L. *albugo* (*albugin-*); see ALBUGO.] — **al"bu-gin'e-ous**, *a.* Of, pertaining to, or resembling the white of the eye: applied to the firm white fibrous tissue forming the tendons, ligaments of the joints, and aponeuroses. **al"bu-gin'e-an‡**; **al-bu'gi-nous‡.** — **al"bu-gin'e-ous-ness**, *n.* — **al"bu-gi-ni'tis**, *n. Pathol.* Inflammation of the albugineous tissue, as in gout and rheumatism.

Al"bu-gin'i-a'ce-æ, 1 al'biu-jin'i-ē'si-i; 2 ăl'bū-ġĭn'ĭ-ā'ce-ē, *n. pl. Bot.* A family of phycomycetous fungi belonging to the group *Peronosporales*. It includes *Albugo*.

al-bu'go, 1 al-biū'go; 2 ăl-bū'ġo, *n.* **1.** [-GI-NES, 1 -ji-niz; 2 -ġi-nēs, *pl.*] *Pathol.* A disease of the eye characterized by a white opacity of the cornea; leucoma. **2.** [A-] *Bot.* Same as CYSTOPUS. [L., < *albus*, white.]

al-bu'ka-lin, 1 al-biū'kə-lin; 2 ăl-bū'ka-lin, *n.* A complex substance found in the blood of persons affected by leucocythemia.

Al-bu'li-dæ, 1 al-biū'li-dī; 2 ăl-bū'lĭ-dē, *n. pl. Ich.* A family of malacopterygians, the ladyfishes, having a conical head, with molar teeth on the parasphenoid and pterygoid bones. **Al'bu-la**, *n.* (t. g.) [< L. *albulus*, whitish, < *albus*, white.] — **al'bu-lid**, *n.* — **al'bu-loid**, *a.* & *n.*

al"bu-lig'no-sin, 1 al'biu-lig'no-sin; 2 ăl'bū-lĭg'no-sin, *n.* A substance derived from wood treated with sodium sulfite in solution with the addition of albumen: claimed to possess sizing and mordanting properties. **al"bu-lig'no-sine‡.**

al'bum, 1 al'bum; 2 ăl'bŭm, *n.* **1.** A book for holding photographs or the like. **2.** A blank book for registering names, or preserving autographs, stamps, etc.; hence, a printed compilation of selections. **3.** A register. **4.** *Rom. Antiq.* A tablet for the record of public transactions, names, etc. **al'bet‡.** **5†.** Anything white. (1) *Law.* Rent paid in white money or silver; blanch-farm. (2) *Pathol.* Leucorrhea. [L., white tablet, < *albus*, white.]

al-bu'men, 1 al-biū'men; 2 ăl-bū'mĕn, *n.* **1.** The white of an egg.

White of egg is no longer recognized in the pharmacopœias of the world, with the exception of the German, which prescribes a dried form of *albumen*, to be used in the preparation of iron albuminate and similar compounds.
The National Standard Dispensatory p. 121.

2. The nutritive material that fills the space in a seed between the embryo and the seed-coats; endosperm or perisperm. **3.** *Chem.* Albumin. [L., whiteness, < *albus*, white.] — **al-bu'men-gland"**, *n.* In some mollusks, as land-snails, a large, tongue-shaped body, dilated during the act of mating, secreting a thick and viscous fluid which probably envelops the ova. — **al-bu'men-ize** or **-ise**, *tt.* Same as ALBUMINIZE. — **al-bu'men-oid**, *n.* Same as ALBUMINOID.

al'bum Græ'cum, 1 al'bum gri'kum; 2 ăl'bŭm grē'cŭm. [L.] The excrement of dogs and some other animals, whitened by exposure to weather; used in tanning and formerly in medicine.

al-bu'min, 1 al-biū'min; 2 ăl-bū'min, *n. Chem.* The transparent, viscous, nitrogenous substance ($C_{72}H_{112}N_{18}SO_{22}$) found in the blood, in all serous fluids, and in many animal and vegetable juices and solids. It contains nearly 2 per cent. of sulfur, and is amorphous like all proteins: it is soluble in water and coagulable by heat, alcohol, and the stronger acids. Albumin is used for clarifying purposes, as in wine-making, sugar-refining, and cookery, and also in the printing of calico, in photography, etc. Compare ALBUMEN. [< L. *albumen* (*albumin-*); see ALBUMEN.] — **albumin process**, a photographic process in which the plate is coated with sensitized albumin. — **alkali a.**, a modification of albumin formed by the action of an alkali. — **Bence Jones a.**, a true albumin which in urine suggests the presence of multiple myeloma: formerly, **Bence Jones albumose.** — **circulating a.**, albumin which occurs only in the fluids of the body. — **iodized a.** (*Phot.*), albumin in which an iodid is present. — **toxic a.**, same as TOXALBUMIN. — **al-bu'mi-nate**, *n. Chem.* A compound in which albumin acts as a weak acid radical. — **Weyl's albuminate**, a modified globulin, following its long exposure to water. — **al-bu"mi-na-tu'ri-a**, *n. Pathol.* An excess of albuminates in urine. — **al"bu-min'ic**, *a.* Relating to or obtained from albumin. — **al-bu"mi-nif'er-ous**, *a.* Yielding or containing albumin. — **al-bu'mi-ni-form**, *a.* Resembling albumin. — **al-bu"mi-nim'e-ter**, *n. Chem.* An apparatus for determining the amount of albumin in a liquid; as, Esbach's *albuminimeter* (a graduated tube used in measuring the precipitate resulting from admixture with a reagent). **al-bu"mi-nom'e-ter‡.** — **al-bu'mi-nin**, *n. Chem.* The substance of the cells that compose the tissue enclosing the whites of birds' eggs. **al-bu'mi-nine‡.** — **al-bu"mi-nip'a-rous**, *a.* Yielding or secreting albumin. — **al-bu'min-ize** or **-ise**, *tt.* **1.** To change into albumin. **2.** To coat or saturate with albumin. **al-bu'men-ize‡.** — **al-bu'min-iz"er** or **-is"er**, *n.*

al-bu'mi-no-. Derived from ALBUMEN or ALBUMIN: a combining form; as, *albumino*-fibrous tissues.

al-bu'mi-noid, 1 al-biū'mi-noid; 2 ăl-bū'mi-nŏid, *a.* Of the nature of or like albumen or albumin. [< ALBUMINO- + -OID.] **al-bu'me-noid‡.** — **albuminoid disease**, a form of degeneration of certain organs into a peculiar wax-like substance, formerly supposed to be allied to starch; waxy degeneration. — **al-bu"mi-nol'dal**, *a.*

al-bu'mi-noid, *n.* **1.** *Chem.* One of a diversified subclass of the simple proteins derived mainly from the supporting and connective animal tissues. See SCLEROPROTEIN and PROTEIN. **2.** *Brewing.* The nitrogenous constituents of barley malt and hops, partly extracted and contained in beer; sometimes a cause of cloudiness in the liquid. **al-bu'me-noid‡.**

al-bu"mi-nom'e-try, *n.* Measurement of the proportion of albumin, as in urine. — **al-bu'mi-none**, *n. Chem.* A substance obtained from an albuminoid; peptone. — **al-bu'mi-nose.** **I.** *a.* Albuminous. **II.** *n.* [Rare.] An albumose. — **al-bu"mi-no'sis**, *n. Pathol.* A morbid condition in which there is an excess of albumin in the blood or in the tissues.

al-bu'mi-nous, 1 al-biū'mi-nus; 2 ăl-bū'mi-nŭs, *a.* Of, pertaining to, like, characterized by, or consisting of albumen or albumin. — **al-bu'mi-nous-ness**, *n.*

al-bu"mi-nu'ri-a, 1 al-biū"mi-niū'ri-ə; 2 ăl-bū"mi-nū'rĭ-a, *n.* The presence of albumin in the urine. [< ALBUMINO- + Gr. *ouron*, urine.] — **cyclic albuminuria**, the appearance of a small amount of albumin in the urine at a definite time each day. — **al-bu"mi-nu'ric**, *a.*

al-bu'moid, 1 al-biū'moid; 2 ăl-bū'mŏid, *n. Chem.* **1.** Same as ALBUMINOID. **2.** An insoluble substance, difficult of digestion, yielding tyrosin, found in the cartilage of mature animals. Compare TYROSIN. [< ALBUMIN + -OID.]

al-bu'mo-scope, 1 al-biū'mo-skōp; 2 ăl-bū'mo-scōp, *n.* An apparatus for ascertaining the presence and quantity of albumin in the urine. [< ALBUMIN + -SCOPE.]

al-bu'mose, 1 al-biū'mōs *or* al'bu-mōs; 2 ăl-bū'mōs *or* ăl'bū-mōs, *n.* A substance formed from albuminoids during digestion; also, any of the proteoses. During the process of digestion, *primary albumoses* are first formed, and these in turn become *deuteroalbumoses* or *secondary albumoses*, which quickly result in peptones and simpler bodies.

al"bu-mo-su'ri-a, 1 al'biū-mo-siū'ri-ə; 2 ăl'bū-mo-sū'rĭ-a, *n. Pathol.* A condition of the urine in which it contains albumose. Compare ALBUMOSE. [< ALBUMOSE + Gr. *ouron*, urine.]

Al"bu-quer'que, 1 ūl"bu-ker'kē; 2 ăl"bų-kĕr'kę, *n.* **1. Afonso d'** (1453–12/11 1515), a Portuguese commander and navigator. **2. Mateo de** (–1646), a Portuguese general. **3.** A group of islands in the Caribbean sea. **4.** 1 al'bu-kūr'ki; 2 ăl'bų-kĕr'kę. A city, county-seat of Bernalillo county, N. Mex.; the seat of the University of New Mexico (non-sectarian), founded in 1892. **5.** A manufacturing town in Estremadura province, Spain. **6.** A town in Bohol, P. I.

Al'burg, 1 ōl'bûrg; 2 ąl'bûrġ, *n.* A village in Grand Isle county, Vt.

al'burn, 1 al'bûrn; 2 ăl'bûrn. **It. a. Auburn. II.** *n.* **1.** Alburnum. **2.** *Zool.* The bleak. [< ALBURNUM.]

al-bur'nal-tas, 1 al-bûr'nal-tas; 2 ăl-bûr'năl-tăs, *n.* A disease of trees in which the transformation of sapwood into heart-wood is arrested, and, accordingly, rings of the former are found mingled with those of the latter. [< ALBURNUM.]

al-bur'num, 1 al-bûr'num; 2 ăl-bûr'nŭm, *n. Bot.* The sap-wood of a tree. See illus. under EXOGEN. [L., < *albus,* white.] **al'burn‡.— al-bur'nous,** *a.*

Al'bur-y, 1 ôl'ber-ı; 2 ąl'bĕr-y, *n.* A town in New South Wales, famous for wine.

Al"by', *n.* See ALBI. [ALBION.

Al'byn, 1 al'bin; 2 ăl'bŷn, *n.* [Scot.] Scotland. See **al-by'sit‡,** *adv.* Scarcely.

Al'ca, 1 al'kə; 2 ăl'ca, *n.* A genus of auks, including the razor-billed auk. [< Icc. *álka,* auk.]

al"ca-ba'la, 1 ôl"ka-bô'lə; 2 ăl"cä-bä'lä, *n.* [Sp.] A tax levied in Spain, and in the Spanish colonies, on all sales of real estate and merchandise; also, a tax on goods sold by chance. The alcabala on real estate was levied as often as the land was sold; that on merchandise was levied on goods sold at public sales, as in the markets. **al"ca-va'la‡.**

The famous *Alcavala* of Spain . . . was at first a tax of ten per cent., . . . and is at present only six per cent., upon the sale of every sort of property.

Al-ces'tis, 1 al-ses'tis; 2 ăl-çĕs'tĭs, *n. Myth.* A daughter of Pelias who voluntarily died to save the life of Admetus, her husband, and was brought back from Hades by Hercules, or, according to another version of the story, by Proserpine. The legend is the subject of a tragedy by Euripides, and is mentioned in the prolog to Chaucer's *Legende of Goode Women,* and in a sonnet by Milton.

al-chem'ic, 1 al-kem'ik; 2 ăl-cĕm'ic, *a.* Of, pertaining to, or produced by means of alchemy.

And jealousy Hath in it an *alchemic* force.
TENNYSON *Queen Mary* act iii, sc. 6.

al-chem'i-cal‡; al-chym'ic‡.— al-chem'i-cal-ly, *adv.*

Al"che-mil'la, 1 al'kı-mil'ə; 2 ăl"ce-mil'a, *n.* A genus of plants of the rose family (*Rosaceæ*), having compound or lobed leaves and small green or yellow flowers: including the lady's-mantle.

al'che-mist, 1 al'kı-mist; 2 ăl'ce-mĭst, *n.* One who was skilled in or who practised alchemy.

There was an old belief that . . . cunning *alchemists*
Could recreate the rose. LONGFELLOW *Palingenesis* st. 4.

al'che-mist-er‡; al'chy-mist‡.— al"che-mis'tic, *a.* Of or pertaining to alchemy or alchemists; practising alchemy. **al"che-mis'ti-cal‡; al"chy-mis'tic‡. — al"che-mis'ti-cal-ly,** *adv.*— **al-chem's-try,** *n.* Alchemy. **al-chym's-try†.**

al'che-mize, 1 al'kı-maiz; 2 ăl'ce-mĭz, *tt.* [Rare.] To transmute as by alchemic art. **al'che-mise‡.**

Darkly brown thy body is. Till the sunshine striking this,
Alchemize its dullness.
E. B. BROWNING *To Flush, My Dog* st. 3.

al'che-my, 1 al'kı-mı; 2 ăl'ce-my, *n.* **1.** The immature chemistry of the middle ages, characterized by the pursuit of the transmutation of base metals into gold, and the search for the alkahest and the panacea.

Some lexicographers derive this word from the Greek *Chemeta,* Egypt (in ancient Egyptian, *Khem-t*). According to Plutarch, Egypt was thus called on account of the black color of its soil. But as *alchemy* signifies the transmutation of metals and the quest of the *Elixir Vitæ,* which arts were not practised in ancient Egypt, this word is more probably derived from the same Egyptian source as *chemistry.*
AMELIA B. EDWARDS *Letter to Standard Dict.* Oct. 23, 1891.

Alchemy . . . was generally confined to the mystery all sought to penetrate, the transmutation of metals into gold.
HALLAM *Lit. Europe* vol. i, pt. i, ch. 2, p. 116. [L. B. & CO. 1854.]

2. Any cunning, mysterious, or preternatural process of changing the structure or appearance of things.

There is in genius that *alchemy* which converts all metals into gold. CARLYLE *Essays, Schiller* in vol. ii, p. 257. [H. M. & CO.]

And e'en the spotless robe of white,
Worn overlong, grows dim and dun
Through the strange *alchemy* of light.
HOLLAND *Mistress of the Manse* pt. ii, can. 7, st. 8.

3†. An imitation gold, or something made of it, as a trumpet. [ME. *alkamye,* < OF. *alkemie,* F. *alchimie,* < LL. *alchimia,* < Ar. *al-kīmiā,* < *al,* the, + *kīmiā,* < Gr. *chēmeia,* for *chymeia,* infusion, < *cheō,* pour.]

The variants below include only such as have been used since A. D. 1400. Analogous variations occur in the derivatives, as in *alchemic, alchemist,* etc. **al-can'a-my†; al'che-mie‡; al'chi-my†; al'chu-my†; al'co-my†.**

al"chi-tran', 1 al'kı-tran'; 2 äl'ci-trăn', *n. Chem.* **1.** The resin-like exudation of fir-trees; by extension, among the early apothecaries, oil of juniper or cedar. **2.** Liquid pitch. **3.** Arsenic that has been prepared by ablution. [< OF. *alquitran,* < Ar. *al,* the, + *qitran,* pitch.] **al"ki-tran'‡.**

al'cho-cho'den, 1 al'ko-kō'den; 2 äl'co-cō'dĕn, *n.* [Ar.] *Astrol.* The planet supposed to indicate by its position at a person's birth the length of his life.

Al-chor'ne-a, 1 al-kôr'nı-ə; 2 äl-cōr'ne-a, *n. Bot.* A genus of trees and shrubs of the spurge family (*Euphorbiaceæ*), found in the Antilles, Brazil, and tropical Africa. One species, *Alchornea latifolia,* is said by some authorities to be the source of alcornoque, a bark which others regard as obtained from a different tree. [< ALCORNOQUE.]

Al-cia'ti, 1 al-chû'tı; 2 äl-chä'tĭ, **Andrea** (5/11492–1/12 1550). An Italian jurist and author.

Al"ci-bi'a-des, 1 al'sı-bı'ə-dīz; 2 äl'çi-bī'a-dēs, *n.* An Athenian general and intriguer; born about 450 B. C.; died 404; ward of Pericles and pupil of Socrates.

Al'ci-dæ, 1 al'sı-dī; 2 äl'çi-dē, *n. pl.* A family of pygopodous birds with 3-toed feet: the auks, puffins, and murres. [< Icc. *álka,* auk.] — **al'cid,** *n.*— **al'ci-dine,** *a.*

Al-cid'a-mas, 1 al-sid'ə-mas; 2 äl-cid'a-măs, *n.* A Greek rhetorician of the 5th century B. C. **Al-ki-da'mas‡** [Gr.].

Al'ci-das, 1 al'sı-das; 2 äl'çi-dăs, *n.* A Spartan naval commander of the 5th century B. C.

Al-ci'des, 1 al-sai'dīz; 2 äl-çī'dēs, *n. Myth.* Hercules, the grandson of Alcæus.

Al-cim'e-don, 1 al-sim'ı-den; 2 äl-çim'e-dŏn, *n. Myth.* An Arcadian or Greek hero. **Al-ki-me'dōn‡** [Gr.].

Al'ci-mus, 1 al'sı-mus; 2 äl'çi-mŭs, *n.* A Jewish high priest of the 2d century B. C.; leader of the Hellenists.

al'cin, al'cine, *n.* Same as ALKAMIN.

Al'ci-na, 1 al-chî'nə; 2 äl-chī'nä, *n.* [It.] In Bolardo's *Orlando Innamorato,* a sorceress, the personification of carnal pleasure: in Ariosto's *Orlando Furioso,* a type of Circe, who transforms her lovers to beasts, stones, trees, etc.

al'cine', 1 al'sin *or* al'sain; 2 äl'çin *or* äl'çin, *a. Ornith.* Of or pertaining to the *Alcidæ.*

al'cine', *a.* Of or relating to the European elk and moose.

Al-cin'o-us, 1 al-sin'o-us; 2 äl-çin'o-ŭs, *n.* **1.** *Myth.* In Homer's *Odyssey,* the king of the Phæacians of Scheria (Corfu); famed for his beautiful gardens. **2.** A Greek Platonic philosopher of the 1st century. **Al-ki'no-os‡** [Gr.].

Al"ci-op'i-dæ, 1 al'sı-op'ı-dī; 2 äl'çi-ŏp'ı-dē, *n. pl. Helminth.* A family of rapacious sea-worms with a distinct cephalic lobe, two prominent eyes, and tentacular cirri behind the head. **Al-ci'o-pe,** *n.* (t. g.) **Al"ci-o-pe'an,** *a.*— **al"ci-o'pe-an, al'ci-o-pid,** *a.* & *n.*— **al'ci-o-poid,** *a.*

Al'ci-phron, 1 al'sı-fren; 2 äl'çi-frŏn, *n.* **1.** A Greek epistolographer and sophist who lived probably in the 2d century. **2.** In Moore's *Epicurean,* the hero, a eudemonistic philosopher. **3.** In Berkeley's *The Minute Philosopher,* a free-thinking interlocutor in the dialog against atheism. **4.** A poem by Moore.

Al-cip'pi-dæ, 1 al-sip'ı-dī; 2 äl-çip'ı-dē, *n. pl. Crust.* A family of abdominalian cirripeds with palpiform anterior appendages and cirriform ones corresponding to the fourth, fifth, and sixth pairs of lepadids. **Al-cip'pe,** *n.* (t. g.) [< Gr. *Alkippē,* daughter of Ares.]

— **al-cip'pid,** *a.* & *n.*— **al-cip'poid,** *a.*

Al-cî'ra, 1 al-thî'rə; 2 äl-thī'rä, *n.* A town in Valencia province, Spain, on an island in the Jucar river.

Al"ci-ron'i-dæ, 1 al'sı-ron'ı-dī; 2 äl'çi-rŏn'ı-dē, *n. pl. Crust.* A family of cymothoidean isopods with the palpus of the maxillipeds free and the mandibles narrowed distally.

Al"ci-ro'na, *n.* (t. g.) — **al-ci-ro'nid,** *n.*— **al-ci-ro'noid,** *a.*

Alc-mæ'on, 1 alk-mî'on; 2 ălc-mē'ŏn, *n.* **1.** *Myth.* Son of Amphiaraus; leader of the Epigoni against Thebes. In obedience to an oracle he slew his mother, and for this act was driven insane by the Furies; he fled to an island in the Bay of Corinth, where he was cured, but returning to seek the jewels for which his mother, Eriphyle, had betrayed Amphiaraus, he was slain by the sons of Phegeus. **2.** A Greek philosopher of the 6th century B. C. **3.** Alcman.

Alc'man, 1 alk'mən; 2 ălc'man, *n.* A Spartan lyric and amatory poet of the 7th century B. C.; fragments of his poems are extant. **Alc-mæ'on‡; Alk'man‡.**

Alc-ma'ni-an, 1 alk-mē'nı-ən, 2 ălc-mā'nı-an, *a.* Of or pertaining to Alcman or to his meter or verse.

Alc-me'na, 1 alk-mî'nə, -nî; 2 ălc-mē'na, -nē, *n. Myth.* **Alc-me'ne,** } The mother of Hercules by Zeus; wife of Amphitryon. **Alk-me'ne‡.**

al'co, 1 al'ko; 2 äl'co. *n.* [S. Am.] A hairless wild dog of Mexico and Peru, domesticated by the aborigines.

al'co-ate, 1 al'ko-ēt; 2 äl'co ăt, *n.* Same as ALCOHOLATE.

Al'cock, 1 ôl'kok; 2 äl cŏk, *n.* **1. John** (1430–10/1500), an English bishop and statesman. **Al'cocke"‡. 2. John** (1/11 1715–2/-1806), an English musician. **3. Sir John William** (11/21892–12/18 1919), British military aviator; with Lieut. A. W. Brown, he made the first non-stop flight across Atlantic, June 14–15, 1919. **4. Sir Rutherford** (1809–11/21897), an English author.

Al"co-fri'bas Na"si-er', 1 al'ko-fri'bə na"sı-ē'; 2 äl"co-frī'bä nä"sı-g'. The pen-name (an anagram) of François Rabelais.

al'co-gel, 1 al'ko-jel; 2 äl'co-ğĕl, *n.* A gelatinous compound of alcohol and colloidal silicic acid. [< ALCOHOL + GELATIN.]

al'co-gene, 1 al'ko-jîn; 2 äl'co-ğēn, *n.* The cooler in a [distiller. [< ALCOHOL + -GENE.]

al'co-hol, 1 al'ko-hol; 2 äl'co-hŏl, *n.* **1.** A volatile, inflammable, colorless liquid ($C_2H_5.HO$) of a penetrating odor and burning taste, derived principally from sugars and sugar-giving substances, as by fermentation and subsequent distillation: the intoxicating principle of wines and other fermented beverages; ethyl alcohol. In commerce, ethyl alcohol from maize or other grain is called **grain-alcohol;** from potatoes and beets, **root-alcohol;** and from grapes, **wine-alcohol** or **spirits of wine;** rectified, pure alcohol of 94 to 96 per cent. strength from any source is known to the trade as **neutral spirits, cologne spirits, velvet spirits,** etc.

Paracelsus of old wasted life in trying to discover its elixir, which after all turned out to be *alcohol;* and instead of being made immortal upon earth, he died drunk on the floor of a tavern.
LONGFELLOW *Hyperion* bk. iii, ch. 9, p. 199. [J. B. A. 1883.]

2. Any liquor containing the above-named liquid.

Alcohol is a poison. It is claimed by some that *alcohol* is a food. If so it is a poisoned food. *Alcohol* is one of the most common causes of insanity, epilepsy, paralysis, diseases of the liver and stomach, dropsy, and tuberculosis.
DR. FREDERICK PETERSON in *Collier's Weekly* Nov. 30, '07.

3. *Chem.* One of a group of the general formula $C_nH_{2n+1}OH$ derived from hydrocarbons of the general formula C_nH_{2n+2} by the substitution of hydroxyl for hydrogen.

Alcohols of the aliphatic series are classified according to the number of hydroxyl groups they contain, as **monatomic** or **monohydric; diatomic** or **dihydric** (glycols); **triatomic** or **trihydric** (glycerins or glycerols), etc., and **polyatomic** alcohols generally. Where the hydroxyl replaces a hydrogen in an exterior group a **primary alcohol,** as primary butyl alcohol ($CH_3CH_2.CH_2CH_2OH$), is formed; if in an interior group with two replaceable hydrogens a **secondary** or **pseudo-alcohol,** as secondary butyl alcohol ($CH_3.CH_2.CHOH.CH_3$), is obtained; and the replacement of a hydrogen by hydroxyl in an inner group with but one replaceable hydrogen gives rise to a **tertiary alcohol** or carbinol, as tertiary butyl alcohol, $(CH_3)_3.COH$.

Of the monatomic alcohols, having the formula $C_nH_{2n+1}OH$, many derive their names from the normal hydrocarbon or the exact source from which they are obtained. The principal members are: **methyl alcohol** or **methylic a.** (called also *wood-spirit, wood-naphtha, pyroxylic spirit,* and *carbinol*), derived from methane; **ethyl a., ethylic a.,** or **vinic a.** (called also *spirit of wine,* or *methyl carbinol*), derived from ethane; **propyl a.** or **propylic a.,** derived from propane; **butyl a.** or **butylic a.,** derived from butane; **amyl a.** or **amylic a.** (called also *grain-oil*), derived from pentane; **caprole a.,** derived from hexane; **œnanthic a.,** derived from heptane, and also the following higher members of the series: **caprylic a., nonylic a., rutic a., cetyl** or **cetylic a.,** and **melissic a.**

The diatomic alcohols have the common formula $C_nH_{2n}(OH)_2$, and are chiefly made from the normal hydrocarbons of the olefin series. The principal members of this group are: **ethylene alcohol** or **glycol, propylene a., butylene a., amylene a., hexylene a.,** and **caprylene a.,** derived respectively from ethylene, propylene, butylene, amylene, hexylene, and caprylene.

The triatomic alcohols have the common formula $C_nH_{2n-1}(OH)_3$. The most important members of the series are: **propenyl a.** (called also *glycerin* or *glycerol*), **butenyl a., pentenyl a.,** and **hexenyl a.**

The principal tetratomic alcohol is erythrite, and the principal hexatomic alcohol is mannite.

4†. An impalpably fine powder. [LL., < Ar. *al-koh'l,* < *al,* the, + *koh'l,* powdered antimony, < *kahala,* paint.]

al'chool†; al'co-hole†; al'cool†; al'ko-hol†.

— **absolute alcohol,** pure alcohol entirely free from water. Pure alcohol can not be obtained by ordinary distillation alone. The rectified spirit or alcohol of the pharmacopœias contains 9 per cent. by weight of water in the United States, 16 per cent. in Great Britain; proof-spirit or diluted alcohol, 54.5 per cent. by weight of water in the United States, 51 per cent. in Great Britain. See PROOF SPIRIT, in vocab. — **cinnamic a.,** same as STYRONE.—

denatured a., alcohol rendered unfit to drink, as by the addition of a foreign substance, but still useful for other purposes, as for producing light, heat, or motive power, as a solvent for resin, oils, or fats, and in the manufacture of ether, etc.— **pyroracemic a.**, same as ACETOL.— **styrylic a.**, same as STYRONE.— **sulfur a.**, same as MERCAPTAN.— **whey a.**, a liquor containing alcohol derived from milk by fermentation; kumiss.— **al"co-hol-ase'**, *n.* A vegetable ferment which during anaerobic respiration is believed to produce alcoholic fermentation.— **al'co-hol-ate**, *n.* An alcohol in which the hydroxyl hydrogen is replaced by a metal; as, sodium *alcoholate* (C_2H_5ONa). **al'co-ate‡**; **al'co-hate‡.**— **al"co-hol'a-ture**, *n.* An alcoholic tincture made from fresh plants.— **al"co-hol"o-phil'i-a**, *n. Pathol.* Uncontrollable craving for alcoholic liquors.

al"co-hol'ic, 1 al'ko-hel'ik; 2 ăl"co-hŏl'ic, *a.* **1.** Of, pertaining to, or having the qualities of alcohol; containing alcohol; produced by or using alcohol; as, *alcoholic* liquors; an *alcoholic* thermometer; *alcoholic* insanity. **2.** Preserved in alcohol; as, an *alcoholic* specimen. **al"co-hol'i-cal‡.**— **al"co-hol'i-cal-ly**, *adv.*

al"co-hol'ic, *n.* **1.** One who uses alcoholic liquors habitually to excess: of recent origin.

> The stomach, the intestines, the liver, . . . all exhibit pathological changes in chronic *alcoholics*.
> GEO. T. KEMP in *Quarterly Journal of Psychology* Jan., 1891.

2. *pl.* Alcoholic liquors; as, the use of *alcoholics*.

al"co-hol-ic'i-ty, 1 al'ko-hel-is'ı-tı; 2 ăl"co-hŏl-ıç'ı-ty, *n.* The quality of being alcoholic; alcoholic strength; as, the *alcoholicity* of a wine.

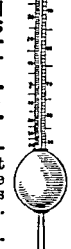
al'co-hol-ism, 1 al'ko-hel-izm; 2 ăl'co-hŏl-ĭsm, *n. Pathol.* A morbid condition resulting from the inordinate or persistent use of alcoholic beverages: a term used (in Latin form) by Magnus Huss of Stockholm in 1848.

> The daily regular use of alcohol, even in moderation, often leads to *alcoholism*.
> DR. FREDERICK PETERSON in *Collier's Weekly* Nov. 30, '07.

— **acute alcoholism**, the condition resulting from taking into the system an excessive quantity of alcoholic liquor at one time or within a brief period; drunkenness; intoxication. — **chronic a.**, a condition resulting from the continuous use of alcoholic drink in less quantities at a time but for a longer period, resulting in delirium tremens, gastric catarrh, fatty degeneration of the bodily organs, etc.— **al'co-hol-ist**, *n.*

al'co-hol-ize, } 1 al'ko-hel-aiz; 2 ăl'co-hŏl-ız, *rt.* [-IZED;
al'co-hol-ise, } -IZ'ING.] *Chem.* **1.** To change into alcohol; rectify till free from water or impurity. **2.** To mix or saturate with alcohol; subject to the influence or effects of alcohol; intoxicate. **3†.** To reduce to a fine powder.— **alcoholized paper** (*Phot.*), paper saturated with a liquid containing alcohol, zinc iodid, milk-sugar, and zinc bromid, followed by treatment with a mixture of silver acetonitrate and glacial acetic acid.— **al'co-hol-iz"a-bl(e)‡**, *a.* **al'co-hol-is"a-bl(e)‡.**— **al'co-hol"i-zate†**, *a.* Alcoholized. — **al"co-hol"i-za'tion**, *n.* **1.** The act or process of alcoholizing, or the state of being alcoholized. **2.** Alcoholism. **al"co-hol"i-sa'tion‡.**

al'co-hol-me"ter, 1 al'ko-hel-mī'tər; 2 ăl'co-hŏl-mē"ter, *n.* An instrument or apparatus, usually a hydrometer, for ascertaining the strength of alcohol or the percentage of absolute alcohol in liquors. [< ALCOHOL + Gr. *metron*, measure.] **al"co-hol-im'e-ter‡**; **al"co-hol-om'e-ter‡**; **al"co-hom'e-ter‡**; **al"co-om'e-ter‡.**— **al"co-hol"o-met'ric**, *a.* Of, pertaining to, or ascertained by the alcohol-meter or alcoholometry.— **al"co-hol-met'ri-cal‡**; **al"co-hol"o-met'ri-cal‡**; **al"co-ho-met'ric‡**; **al"co-o-met'ri-cal‡.**— **al"co-hol"i-met'ri-cal-ly**, **al"co-hol"o-met'ri-cal-ly**, **al"co-o-met'ri-cal-ly**, *adv.*



Alcohol-meter.

al'co-hol'o-gy, 1 al'ko-hel'o-jı; 2 ăl'co-hŏl'o-ġy, *n.* The branch of medical science that treats of the diseases caused by alcohol: a more inclusive term than *alcoholism*, which embraces only the specific diseases designated by that term. [< ALCOHOL + -LOGY.]

al"co-hol-om'e-try, 1 al'ko-hel-em'ı-trı; 2 ăl'co-hŏl-ŏm'e-try, *n.* The process of determining the strength of alcohol or the percentage of absolute alcohol in a spirituous mixture. **al"co-om'e-try‡.**

al'cold, 1 al'keld; 2 ăl'cŏld, *a.* Of or pertaining to the *Alcidæ*.

Al-col'de-æ, 1 al-kel'dı-ı; 2 ăl-cŏl'de-ē, *n. pl. Ornith.* A superfamily of sea-birds, including the auks and loons. [< ALCÆ + -OID.] — **al"col'de-an**, *a. & n.*

Al-co'na, 1 al-kō'nə; 2 ăl-cō'na, *n.* A county in N. E. Michigan; 700 sq. m.; county-seat, Harrisville.

al"co-o"thi-on'ic, 1 al'ko-ō"thı-en'ik; 2 ăl"co-ō"thi-ŏn'ic, *a.* Althionic. [< ALCOHOL + Gr. *theion*, sulfur.]

Al"co-ran', } 1 al'ko-rān'; 2 ăl"co-rān' (XIII), *n.* Same as
Al"ko-ran', } KORAN. [F., < Ar. *al-qorān*, < *al*, the, + *qaraa*, read.]— **Al"co-ran'ic**, *a.* **Al"co-ran'al‡**; **Al"co-ran'ish‡.**

Al'fred Jin'gle, 1 jiŋ'gl; 2 jĭŋ'gl. In Dickens's *Pickwick Papers,* a strolling actor and swindler.

Al'fred Lam'mle, 1 lam'l; 2 lăm'l. In Dickens's *Our Mutual Friend,* a trickster who marries Sophronia Akershem for money and finds that she is poor.

al fres'co, 1 al tres'ko; 2 äl frĕs'co. [It.] **1.** In the open air; as, luncheon *al fresco.* **2†.** On fresh plaster; fresco.

Al'fre-ton, 1 ēl'frı-tən; 2 äl'fre-ton, *n.* A market-town in Derbyshire, England.

Al'fric of Can'ter-bur-y, 1 ēl'frik; 2 al'fric, styled "The Grammarian." An Anglo-Saxon writer of the 10th century.

al'fri-da-ry, 1 al'frı-dē-rı; 2 äl'frı-dā-ry, *n. Astrol.* The period during which a planet rules one's destiny. [< Ar. *al,* the, + *farīda,* fixed part.] — **al''fri-dar'ic,** *a.*

Al-fur', 1 al-fūr'; 2 äl-fur', *n.* One of the Alfurese. **Al-foo'rat; Al-fu'rat; Ar-a-fu'rat.**

Al''fu-rese', 1 al'fu-rīs' *or* -rīz'; 2 äl'fu-rēs' *or* -rēs', *n. sing. & pl. Ethnol.* **1.** A member, or the members, of the negroid race inhabiting Celebes and other islands of the Malay Archipelago. **2.** Their language, allied to the Malayan and Papuan. [< D. *Alfoer,* < Ar. *al,* the, + Pg. *fora,* < L. *foris,* outside.] **Al-fu'rot.** — **Al''fu-rese',** *a.*

Alg., *abbr.* Algernon; Algiers. — **alg.** Algebra.

al'ga, 1 al'gə; 2 äl'ga, *n.* [-GÆ, 1 -jī; 2 -ĝē, *pl.*] [L.] A plant of any of various classes of the *Thallophyta* containing chlorophyl: a seaweed. **algt.**

al'gæ, 1 al'jī; 2 äl'ĝē, *n. pl.* [L.] *Bot.* **1.** Green, brown, or red aquatic cryptogamous plants, occurring in both sea and fresh water; including kelps, seaweeds, diatoms, etc. Some of the species cause water in reservoirs or in conduits to spoil and become ill-smelling. **2.** [A-] Formerly, a division of the *Thallophyta* having chlorophyl, as distinguished from *Fungi,* which are without chlorophyl. — **al'gæ-lay''er** or **-zone'',** *n.* Same as GONIDIAL LAYER. See under GONIDIAL, *a.* — **brown a.,** the *Phæophycex.* [ALGOLOGIST, etc.

al''gæ-ol'o-gist, al''gæ-ol'o-gy, *n.* Improper spellings of **al'gal.** **I.** *a.* Of or pertaining to algæ; due to algæ, as the contamination of water-supplies. **II.** *n.* An alga.

Al-ga'les, 1 al-gā'lız; 2 äl-ĝā'lēs, *n. pl. Bot.* In Lindley's system, an alliance of the lower cryptogams, equivalent to *Algæ.* [< L. *alga,* seaweed.]

al-garde'†, *n.* An old, once famous Spanish wine.

Al-gar'di, 1 al-gär'dı; 2 äl-ĝär'di, **Alessandro** (1602–6/10 1654). An Italian sculptor; *Leo forbidding Attila to enter Rome.*

al'ga-rot, 1 al'gə-rət; 2 äl'ga-rŏt, *n. Chem.* Antimony oxychlorid, a purgative and emetic white powder. [< F. *algaroth,* < *Algarotti,* physician of Verona.] **al'ga-roth†; powder of algaroth†.**

Al''ga-rot'ti, 1 äl'ga-rot'tı; 2 äl'ĝä-rŏt'ti, **Francesco** (12/11 1712–5/21 1764). An Italian author; made a count by Frederick the Great, 1740.

al''gar-ro'ba, 1 al'gə-rō'bə; 2 äl'ga-rō'ba, *n.* [Sp.] **1.** (1) The carob-tree (*Ceratonia siliqua*). (2) Its pods or beans, known as **St.-John's-bread. 2.** The honey-mesquite tree (*Prosopis glandulosa*), and also the South-American *Hymenæa courbaril,* the seeds of which are used in dyeing, etc. **3.** A South-American catechu-like substance yielding tannin and brown dye. **al''ga-ro'ba†; al''ga-ro'bi-a†.**

al''gar-ro-bil'la, 1 al'gə-ro-bil'ə; 2 äl'ga-ro-bil'a, *n.* [Sp.] The seeds and seed-pods of various South-American leguminous trees and shrubs, used in dyeing and tanning. **al''ga-ro-vil'la†.**

Al'gar-sife, 1 al'gər-sīf; 2 äl'ĝar-sīf, *n.* In Chaucer's *The Squire's Tale,* the elder son of Cambuscan.

Al''gar-vé', 1 al'gər-vē'; 2 äl'ĝär-vę', *n.* A province of Portugal; 1,937 sq. m.; capital, Faro.

al'gate, 1 ēl'gēt; 2 al'ĝāt, *adv.* **1.** [Dial. or Obs.] Everywhere. **2†.** Always; continually. **3†.** Altogether; in every way. **4†.** Nevertheless. **al'gatest.**

al''ga-zel', 1 al'gə-zel'; 2 äl'ĝa-zĕl', *n.* A gazel: an early form. [< Ar. *al,* the, + *ghazāl,* gazel.]

Al'ge-bar, 1 al'jı-bär; 2 äl'ĝe-bär, *n.* **1.** The constellation Orion. See CONSTELLATION. **2.** Rigel. [< Ar. *al,* the, + *gebar,* giant.]

al'ge-bra, 1 al'jı-brə; 2 äl'ĝe-bra, *n.* **1.** That branch of mathematical analysis which reasons about quantity by the use of letters and generalized symbols; generalized arithmetic.

In its more limited sense it treats only of the effects of five fundamental operations — addition, subtraction, multiplication, division, and the extraction of roots. Beyond this it is somewhat vaguely known as **higher algebra.** The principal branches of algebra may be broadly classified as follows: (1) **The theory of numbers,** treating of the general principles of numbers apart from any arbitrary system of notation and their application to such problems as that of the determination of primes. (2) **The theory of equations** and the study of certain functions having special relations to their solution, as *determinants* and *invariants.* (3) **The infinitesimal calculus,** embracing *differential* and *integral calculus,* the *calculus of variations, infinite series,* and *differential equations,* together with the functions specially related to their solution, as elliptic integrals. (4) **The theory of functions,** treating of the functions mentioned under the two branches just preceding, and all other functions, as subject to the same general laws and as examples of a great class of quantities. (5) **Multiple algebras,** based on two or more units differing in kind, arising originally from a consideration of so-called imaginaries, and including *quaternions* and other *vector analyses.* **2.** A treatise on this branch.

I never saw an *algebra* . . . until after I was appointed to West Point. U. S. GRANT *Pers. Mem.* vol. i, p. 24. [c. L. w. 1885.]

[< It. *algebra,* < Ar. *aljebr,* binding together, < *al,* the, + *jabara,* reunite.] — **Boolian** or **logical algebra,** a method of dealing with concepts of logic by means of algebraic symbols and operations. — **double a.,** that form of algebra in which the symbols indicate lines, their lengths, and their directions. — **graphic a.,** algebra in which curves are used to express the relations of quantities; simple analytical geometry. — **multiple** or **n-way a.,** that algebra in which heterogeneous units are combined and multiplied. — **pure a.,** algebra in which all the units are definitely related. — **rhetorical a.,** the discussion of problems by algebraic methods, but in ordinary language; algebra without notation. — **universal a.,** a method of reasoning by symbols, of which the general definitions may be applied to any process of addition and others to any process of multiplication; multiple units treated algebraically.

al''ge-bra'ic, 1 al'jı-brē'ık; 2 äl'ĝe-brā'ic, *a.* **1.** Of, pertaining to, or used in algebra. **2.** Involving only the five operations of algebra — addition, subtraction, multiplication, division, and the extraction of roots whose indices are integers: opposed to *transcendental.* **3.** Taking sign into account; recognizing minus as well as plus quantity; as, in the expression $6x - 5y$, the arithmetical sum of the coefficients is 11; the *algebraic* sum of $+6$ and -5 is $+1$. **al''ge-bra'i-cal†.** — **algebraic curve,** a curve whose equation contains no transcendental quantities. — **a. magnitude,** magnitude including negative as well as positive values. — **a. number,** a root of an algebraic equation with rational coefficients. — **a. signs,** the signs of addition, *plus* (+); subtraction, *minus* (−); multiplication (×); division (÷); parenthesis ( ), indicating that all enclosed is to be treated as one. Other symbols are: =, equal to; > and <, greater than, less than; √, square root, etc. — **al''ge-bra'i-cal-ly,** *adv.* By algebraic symbols; according to the methods of algebra.

al'ge-bra''ist, 1 al'jı-brē'ıst; 2 äl'ĝe-brā'ist, *n.* One who uses algebra; one versed in algebra. **al''ge-bri'cian†; al'ge-brist†.** — **al'ge-bra-ize** or **-ise,** *vt.* To do by algebraic methods; reduce to algebraic forms. — **al'ge-bra-ism†,** *n.*

Al''ge-ci'ras, 1 l'jı-sī'ras *or* (*Sp.*) äl''hē-thī'ras; 2 äl''ĝe-cī'ras *or* (*Sp.*) äl''hę-thī'räs, *n.* A historic seaport in Cadiz province, Spain, close to Gibraltar; taken by Moors, 711; retaken and destroyed by King Alfonso of Castile, 1344; naval fight between England and France, July 6, 1801; scene of the International Conference on Affairs in Morocco, 1906.

al-ge'do, 1 al-jī'do; 2 äl-ĝē'do, *n. Pathol.* A pain or swelling in the region of the urinary and genital organs, occurring on the sudden suppression of a gonorrheal discharge. [< Gr. *algēdōn,* pain, < *algeō,* suffer.]

al''ge-don'ic, 1 al'jı-don'ık; 2 äl''ĝe-dŏn'ic, *a. Psychol.* Characterized by or relating to pleasure and pain, or the agreeable and the disagreeable. [< Gr. *algos,* pain, + *hēdonē,* pleasure.] — **al''ge-don'ics,** *n. Psychol.* That branch of psychology which considers pain and pleasure, the agreeable and the disagreeable, in their various relations to human life, especially to art. Hence the expression *algedonic* esthetics.

al''ge-fa'cient, 1 al'jı-fē'shent; 2 äl'ĝe-fā'shĕnt, *a.* [Rare.] Making cool. [< L. *algeo,* be cold, + *facio,* make.]

Al''ge-me-si', 1 al'hē-mē-sī'; 2 äl'hę-mę-sī', *n.* A town in Valencia, Spain.

al'geous, *a.* Same as ALGOUS.

Al'ger, 1 al'jər; 2 äl'ger, *n.* **1. Cyrus** (11/11 1781–3/11 1856), an American inventor and metallurgist. **2. Russell Alexander** (2/11 1836–1/11 1907), an American soldier, statesman, and capitalist. **3.** A county in N. W. Michigan; 983 sq. m.; county-seat, Au Train. **4.** 1 ēl'jēr; 2 äl'zhēr. Same as ALGIERS.

Al-ge'ri-a, 1 al-jī'rı-ə; 2 äl-ĝē'ri-a, *n.* A French colony on the S. coast of the Mediterranean, east of Morocco; 343,500 sq. m.; capital, Algiers.

Al-ge'ri-an, 1 al-jī'rı-ən; 2 äl-ĝē'ri-an. **I.** *a.* Of or pertaining to Algeria or its inhabitants. **II.** *n.* A native or resident of Algeria. — **Algerian stripe,** a cream-colored textile fabric woven in alternate stripes of silk and cotton.

Al''ge-rine', 1 al'jı-rīn'; 2 äl'ĝe-rĭn', *n.* **1.** A native or inhabitant of Algiers or Algeria, especially a native Berber, Arab, or Moor. **2.** A pirate or corsair. **3.** [a-] A soft woolen fabric or shawl with bright stripes. — **Al''ge-rine',** *a.*

Al'ger-non, 1 al'jər-nən; 2 äl'ger-nŏn. *n.* A masculine personal name. **Al'gy** (dim.). [F., with whiskers.]

al-ge'si-a, 1 al-jī'sı-[*or* -zı-]ə; 2 äl-ĝē'si-[*or* -si-]a, *n. Pathol.* Excessive sensibility to pain. [< Gr. *algos,* pain.]

al-ge''si-chro-nom'e-ter, 1 al-jī'sı-kro-nem'ı-tər; 2 äl-ĝē''si-cro-nŏm'e-ter, *n. Med.* An apparatus for measuring the interval between the stimulus and the sensation of pain. [< Gr. *algēsis,* sense of pain, + CHRONOMETER.] **al''ge-chro-nom'e-ter†.**

al''ge-sim'e-ter, 1 al'jı-sim'ı-tər; 2 äl'ĝe-sim'e-ter, *n.* Same as ALGOMETER. — **al''ge-si-met'ric,** *a.* Same as ALGOMETRIC.

al''ges-the'sis, 1 al''jes-thī'sıs; 2 äl''ĝĕs-thē'sis, *n. Med.* Perception of pain. [< Gr. *algos,* pain, + *aisthēsis,* feeling.] **al''gæs-the'sis†.**

al-get'ic, 1 al-jet'ık; 2 äl-ĝĕt'ic, *a.* Of, pertaining to, or causing pain. [< Gr. *algeō,* suffer.]

Al-ghi'si, 1 al-gī'zı; 2 äl-ĝī'si, *n.* **1. Francesco** (1666–1733), an Italian musical composer. **2. Tommaso** (1669–1713), an Italian surgeon.

-al'gi-a, 1 -al'jı-ə; 2 -äl'ĝi-a, *suffix.* Used in pathology to signify pain, and in combination, indicating a complaint, as neur*algia.* [< Gr. *algos,* pain.] **-al'gy†.**

Al'gic. See ALGONKIAN, *a.* & *n.*

al'gi-cide, 1 al'j.-said; 2 äl'ĝi-cid, *n.* A substance used to destroy algæ. [< ALGA + L. *cædo,* kill.]

al'gid, 1 al'jid; 2 äl'ĝid, *a.* Cold; chilly; as, the *algid* stage of an ague. [< F. *algide,* < L. *algeo,* be cold.] — **algid cholera,** Asiatic cholera. — **a. fever,** an intermittent fever with severe chills, often fatal. — **al-gid'i-ty,** *n.* Chilliness; extreme coldness. — **al-gif'ic,** *a.*

Al-giers', 1 al-jīrz'; 2 äl-ĝērs', *n.* **1.** A department of Algeria. **2.** The capital and chief seaport of Algeria. **Al''ger'†** [F.].

al'gin, 1 al'jin; 2 äl'ĝin, *n. Chem.* A sticky, nitrogenous substance found in marine plants, especially in *Algæ,* and used as in the preparation of iodin. **al'gine†.** — **al-gin'ic,** *a.*

al''gi-nu-re'sis, 1 al'jı-nıu-rī'sıs; 2 äl'ĝi-nū-rē'sis, *n. Pathol.* Pain in passing urine. [< Gr. *algos,* pain, + *ouron,* urine.]

al'gist, 1 al'jist; 2 äl'ĝist, *n.* A student of or an authority upon algæ.

al-giv'o-rous, 1 al-jiv'o-rus; 2 äl-ĝiv'o-rŭs. *a.* Feeding on algæ, as certain lizards. [< ALGA + L. *voro,* devour.]

Al-go'a Bay, 1 al-gō'ə; 2 äl-ĝō'a. A bay on the S. E. coast of Africa, receiving the Sunday and Baasher rivers and forming the harbor of Port Elizabeth.

al''go-don', 1 ēl'go-dōn'; 2 äl'go-dŏn', *n.* [Sp.] The cotton-plant; cotton; also, any of the several related plants or their products.

al-god'o-nite, 1 al-ged'o-nait; 2 äl-ĝŏd'o-nit, *n. Mineral.* A steel-gray to silver-white copper arsenid (Cu$_3$As), found commonly massive and distinctly granular. [< *Algodones,* in Chile.] [ALGA + -OID.]

al'goid, 1 al'goid; 2 äl'ĝoid, *a.* Of or like algæ. [<

Al'gol, 1 al'gol; 2 äl'ĝol, *n. Astron.* The variable star Beta in Perseus: sometimes called the *Demon Star.*

For two days and ten hours the star remains of uniform lustre, being ranked about the second magnitude; then a decline of brightness sets in, and the star in a few hours parts with three fifths of its brightness. At the lowest point it remains for about twenty minutes, and then the brilliancy commences to increase so that in a few hours more *Algol* has resumed its original character.

SIR R. S. BALL in *Fortnightly Review* Jan., 1892, p. 15.

[< Ar. *al-ghūl,* destruction, < *al,* the, + *ghāla,* destroy.] — **Algol variable,** any star whose normal condition is bright, and which periodically loses a certain amount of its light by a secondary dark body coming between the observer and the star. — **Al-go'll-an,** *a.* **1.** Belonging or relating to Algol. **2.** Having a spectrum similar to that of Algol.

al-gol'o-gy, 1 al-gol'o-jı; 2 äl-ĝŏl'o-ĝy, *n. Bot.* That branch of botany which treats of algæ. [< L. *alga,* seaweed, + -OLOGY.] — **al''go-log'i-cal,** *a.* — **al-gol'o-gist,** *n.* An algist.

Al-go'ma, 1 al-gō'mə; 2 äl-ĝō'ma, *n* **1.** A district in northern Ontario, Canada; 43,150 sq. m.; capital, Sault Ste. Marie. **2.** A city in Kewaunee county, Wis.

al-gom'e-ter, 1 al-gem'ı-tər; 2 äl-ĝŏm'e-ter, *n. Pathol.* An instrument to measure the intensity of pain. *Fortnightly Rev.* Mar., 1892, p. 355. [< Gr. *algeō,* suffer, + *metron,* measure.]

al-gom'e-try, 1 al-gem'ı-trı; 2 äl-ĝŏm'e-try, *n.* Measurement of pain. — **al''go-met'ric, al''go-met'ri-cal,** *a.* — **al''go-met'ri-cal-ly,** *adv.*

Al-go'na, 1 al-gō'nə; 2 äl-ĝō'na, *n.* The county-seat of Kossuth county, Ia. [Clair county, Mich.

Al-go'nac, 1 al-gō'nak; 2 äl-ĝō'nac, *n.* A village in St.

Al-gon'ki-an, 1 al-gen'kı-ən; 2 äl-ĝŏn'ki-an, *a.* **1.** Of, pertaining to, or named after the Algonkian Indians. **Al'gic†. 2.** *Geol.* Of, pertaining to, or characterized by a series of strata between the Laurentian, Archean, and the Cambrian. They are also called **Agnotozoic, Eparchean,** and **Proterozoic,** and are recognized only in the United States. The Algonkian strata are at present considered by the U. S. Geological Survey to characterize and belong to a separate period of coordinate rank with the Archean and Cambrian periods. It has been proposed in the reports of the survey to constitute a separate Agnotozoic era for them. For statement of component strata, see chart under GEOLOGY. **Al-gon'qui-an†.**

Al-gon'ki-an, *n.* **1.** A linguistic stock of North-American Indians, formerly occupying the vast area from North Carolina to Hudson Bay and from the Atlantic to the Mississippi river, with outlying tribes in the Rocky Mountains. See under AMERICAN. **Al'gic†. 2.** *Geol.* The Algonkian period or strata. See ALGONKIAN, *a.* **Al-gon'qui-an†.**

Al-gon'kin, 1 al-geŋ'kın; 2 äl-ĝŏŋ'kin, *n.* One of the Algonkian family of North-American Indians.

Like a great island in the midst of the *Algonquins* lay the country of tribes speaking the generic tongue of the Iroquois.

F. PARKMAN *Jesuits in N. A.* intro., p. 20. [L. B. & CO. 1886.]

Al-gon'quin†.

Al-gon'quin, 1 al-gon'kin; 2 ăl-gŏn'kĭn, *n.* **1.** A village in McHenry county, Ill. **2.** *Geol.* An extensive North-American Pleistocene lake, which covered all the basins of the present Great Lakes north of Lake Erie and discharged eastward across what is now Ontario and through Lake Iroquois into the Hudson river.

al"go-pho'bi-a, 1 ăl"go-fō'bi-ə; 2 ăl"gŏ-fō'bĭ-ə, *n. Pathol.* Abnormal fear of pain. [< Gr. *algos*, pain, + -PHOBIA.]

al'gor, 1 al'gor; 2 ăl'gôr, *n.* [L.] Cold; chilliness; especially, an abnormal coldness, as in the early stages of a fever.

al'go-rism, 1 al'go-rizm; 2 ăl'gŏ-rĭsm, *n.* **1.** The Arabic or decimal system of numeration now in common use; also, computation by this system; hence, arithmetic. **2.** Any method, or any special application of a method, of numeration or computation, especially a method represented by symbols. [< F. *algorithme*, < LL. *algorithmus*, < Ar. *al-Khowārazmi* (the native of *Khwārazam*, or *Khiva*), surname of an Ar. mathematician.] **aw'grim†.— al'go-rism-stones",** *n. pl.* Counters.— **al"go-ris'mic,** *a.*— **al'go-rist,** *n.* One who uses or favors the use of Arabic numerals in computation; an arithmetician.— **al"go-ris'tic,** *a.* Of or pertaining to an algorist or algorism.

al-go'sis, 1 al-gō'sis; 2 ăl-gō'sĭs, *n. Pathol.* A morbid condition brought about by the presence of algæ or fungi in the body. [< ALGÆ.]

al'gous, 1 al'gus; 2 ăl'gŭs, *a.* Like, pertaining to, or abounding with algæ or seaweed. [< L. *algosus*, < *alga*, seaweed.]

al'gra-phy } 1 al'grə-fi; 2 ăl'gra-fy, *n.* A surface-print-
al'gra-fy[s], } ing method, similar to lithography, from aluminum plates instead of stone or zinc. New and improved methods of treating zinc for the same process have displaced aluminum as a substitute for stone in lithographic work, and in the rubber offset process. [< *al-* in ALUMINUM + -GRAPHY.] — **al-graph'ic,** *a.*

al"gua-zil', 1 al"gwə-zil'; 2 ăl"gwă-zĭl', *n.* [Sp.] In Spain and her colonies, an officer of justice; a constable.

The command was given to Diego de Arana, . . . *alguazil* to the armament. IRVING *Columbus* vol. i, bk. iv, p. 238. [c. P. F. P. 1861.]

al"gua-cil'‡.

al'gum, 1 al'gum; 2 ăl'gŭm, *n.* See ALMUG.

Al'gy, 1 al'ji; 2 ăl'gy, *n.* Diminutive of ALGERNON.

al"ha-ce'na, 1 ăl"ə-thē'nə; 2 ăl"ă-thē'nă, *n.* [Sp.] A recess; particularly, an ornamental niche used for a cupboard having Spanish or Moorish decorations.

Al-ha'di, 1 al-hā'di; 2 ăl-hă'dĭ, *n.* Same as HAMZA.

Al-ha'gi, 1 al-hē'jai; 2 ăl-hă'gi, *n. Bot.* A small genus of shrubby African and Asiatic plants of the bean family (*Fabaceæ*). *A. camelorum* or *Maurorum* produces its leaves in the hottest weather only and exudes an edible manna. [< Ar. *al-hāj*, camel's-thorn.] **A'gul‡.**

Court of Lions in the Alhambra.

Al-ha'kem, 1 al-hā'-kem; 2 ăl-hă'kĕm, *n.* **1.** A calif of Cordova (913–12/21 976); patron of literature and science. **2.** See AL-MOKANNA.

Al-ham'bra, 1 al-ham'brə: 2 ăl-hăm'bra, *n.* **1.** A medieval Moorish palace in Granada, Spain, regarded as the finest example of Moorish architecture, which has given its name to a type of decoration. **2.** A town in Los Angeles county, Cal. **3.** [a-] A coarse counterpane having colored threads woven through it. [Sp., < Ar. *al*, the, + *hamra*, red.]

Al"ham-bra'ic, 1 al'ham-brē'ik; 2 ăl"hăm-brā'ĭc, *a.* Of or pertaining to the Alhambra, or like it in style or decoration.— **Alhambraic architecture,** see MOORISH.

Al"ham-bresque', 1 al'ham-bresk'; 2 ăl'hăm-brĕsk', *a. Arch.* Like the Alhambra or its peculiar and delicate type of Moorish architecture; Alhambraic.

Al-ha'zen, 1 al-hā'zen; 2 ă-hă'zĕn, *n.* An Arabian mathematician and philosopher of the 10th century.

al-hen'na, 1 al-hen'ə; 2 ăl-hĕn'a, *n.* Same as HENNA.

al"-het', 1 āl"-het'; 2 ăl"-hĕt', *n.* The "longer confession of sin" of the Jews. It is arranged like an acrostic, and is chanted repeatedly on the Day of Atonement at the services by reader and congregation.

A'li, 1 ā'li; 2 ă'lĭ, *n.* (600?–661.) The adopted son of Mohammed and the fourth calif.

A"li-a'ga, 1 ə"li-ā'gə; 2 ă"lĭ-ă'gă, *n.* A town in Nueva Ecija province, Luzon, P. I.

Al'i-ah, 1 al'i-ə *or* ə-lai'ə; 2 al'i-a *or* a-lī'a, *n. Bib. 1 Chron.* i, 51. **Al'yah‡.**

A"lia"met', 1 ə"lyə"mē'; 2 ă"lyă"mĕ', **Jacques** (1726–1788). A French engraver.

Al'i-an, 1 al'i-ən *or* ə-lai'ən; 2 ăl'ĭ-an *or* a-lī'an, *n. Bib. 1 Chron.* i, 40. **Al'yan‡.**

a'li-as, 1 ē'li-əs; 2 ā'lĭ-as, *a. Law.* Another; second; as, an *alias* writ, *i. e.*, one issued when the first has failed.

a'li-as, *n.* **1.** Another name; an assumed name.

Wilson is never so good, as when he assumes the glorious *alias* of Christopher North. G. GILFILLAN *Mod. Lit.* p. 157. [A. 1850.]

There is no sin but seeks to cheat the world by an *alias*.
GEIKIE *Entering on Life, Character* p. 25. [J. D. A. 1887.]

2. *Law.* A second writ to the same effect as a former one, issued after the first has failed.

a'li-as, *adv.* **1.** Otherwise: for *alias dictus*, otherwise called; as, Richard Roe, *alias* James Jackson. **2.** *Law.* At another time; previously; heretofore: used in a writ issued a second time. [L., < *alius*, other.]

[OF., < L. *alienus*, < *alius*, other.]

Syn.: conflicting, contradictory, contrary, contrasted, distant, foreign, hostile, impertinent, inappropriate, irrelevant, opposed, remote, strange, unconnected, unlike. *Foreign* refers to difference of birth, *alien* to difference of allegiance. In their figurative use, that is *foreign* which is *remote, unlike, or unconnected;* that is *alien* which is *conflicting, hostile, or opposed. Impertinent* and *irrelevant* matters can not claim consideration in a certain connection; *inappropriate* matters could not properly be considered. See CONTRADICTORY. Compare ALIEN, *n.*; CONTRAST, *v.*— Ant.: akin, appropriate, apropos, essential, germane, pertinent, proper, relevant.— Prep.: alien *to* or *from* my thought: *to* preferable.

a'lien[1], *n.* **1.** One who owes allegiance to a foreign government; as, both citizens and *aliens* are under the protection of our laws. In France the children of aliens, tho born in the country, are considered aliens; in Great Britain and the United States such children, if they remain in the country, are generally looked upon as native-born citizens. **2.** A resident foreigner: one of another race. **3.** One who or that which is estranged or excluded from some body or privilege; as, an *alien* from the truth. **4.** [Rare.] One unknown or unfamiliar; a stranger; as, "*aliens* among the birds." LOWELL *Al Fresco* st. 1.

Syn.: foreigner, stranger. A naturalized citizen is not an *alien*, tho a *foreigner* by birth, and perhaps a *stranger* in the place where he resides. A person of foreign birth not naturalized is an *alien*, tho he may have been resident in the country a large part of a lifetime, and ceased to be a *stranger* to its people or institutions. He is an *alien* in one country if his allegiance is to another. The people of any country still residing in their own land are, strictly speaking, *foreigners* to the people of all other countries, rather than *aliens;* but *alien* and *foreigner* are often used synonymously. — Ant.: citizen, native-born inhabitant, naturalized person.— Prep.: aliens *to* (more rarely *from*) our nation and laws; aliens *in* our land, *among* our people.

[< AS. *onlic*, < *on-* (prep. ON) + *lic* (see LIKE); cp. Goth. *analeikō*, adv., in like manner; G. *ähnlich*, similar.]

Syn.: akin, analogous, equal, equivalent, homogeneous, identical, kindred, resembling, same, similar. *Alike* is a comprehensive word, signifying as applied to two or more objects that some or all qualities of one are the same as those of the other or others; by modifiers may be made to express more or less resemblance; as, these houses are somewhat (*i. e.*, partially) *alike;* or, these houses are exactly (*i. e.*, in all respects) *alike*. Cotton and wool are *alike* in this, that they can both be woven into cloth. Substances are *homogeneous* which are made up of elements of the *same* kind, or which are the *same* in structure. Two pieces of iron may be *homogeneous* in material, while not *alike* in size or shape. In geometry, two triangles are *equal* when they can be laid over each other, and fit, line for line and angle for angle; they are *equilateral* when they simply contain the same amount of space. An *identical* proposition is one that says the same thing precisely in subject and predicate. *Similar* refers to close resemblance, which yet leaves room for question or denial of complete likeness or identity. To say "this is the *identical* man," is to say not merely that he is *similar* to the one I have in mind, but that he is the very *same* person. Things are *analogous* when they are *similar* in idea, plan, use, or character, tho perhaps quite unlike in

appearance; as, the gills of fishes are said to be *analogous* to the lungs in terrestrial animals.— Ant.: different, dissimilar, distinct, heterogeneous, unlike.— Prep.: alike *in* kind; they are all alike *to* me.

[< Gr. *aleiphatos*, oil, fat.]— **aliphatic compounds**, a class of carbon compounds, such as methane, ethylene, acetylene, and their derivatives, characterized by the open-chain structure.

Al″i-pi′, 1 al′ı-pī′; 2 ăl′ı-pī′, *n.* Same as ALLEPPI. [term.

a-li′pin, 1 ə-lī′pin; 2 ä-lī′pin, *n.* [P. I.] A slave: Tagalog

al′i-pite, 1 al′ı-pait; 2 al′ı-pīt, *n. Mineral.* A massive apple-green hydrated magnesium-nickel silicate similar to genthite. [< Gr. *alipēs*, not greasy.]

al″ip-te′ri-on, *n.* Same as ELÆOTHESIUM.

a-lip′tic, 1 a-lip′tık; 2 ä-lip′tic. **I.** *a.* Relating to anointing. **II.** *n.* An unguent. [< Gr. *aleiptos*, anointed, < *aleiphō*, anoint.]

al′i-quant, 1 al′ı-kwənt; 2 ăl′ı-kwant, *a.* Contained in another number or quantity, but not without remainder; as, 4 is an *aliquant* part of 9. Compare ALIQUOT, *a.* [< F. *aliquante*, < L. *aliquantus*, somewhat, < *alius*, other, + *quantus*, how much.]

al′i-quot, 1 al′ı-kwət; 2 ăl′ı-kwŏt. **I.** *a.* Contained in something else an exact number of times: said of a part or division; as, 6 is an *aliquot* part of 12 and 18. **II.** *n.* An aliquot part. [< F. *aliquote*, < L. *aliquot*, < *alius*, some, + *quot*, how many.] — **aliquot tones** (*Acoustics*), overtones; harmonics.

A″li-Raj-pur′, 1 ɑ″lı-rɑj-pūr′; 2 ä″lı-räj-pur′, *n.* A state in Rajputana, India; 708 sq. m.; capital, Rajpur.

Al′i-ris, 1 al′ı-ris; 2 ăl′ı-rĭs, *n.* In Moore's *Lalla Rookh*, the hero, who, under the name of Feramorz, wins the heroine's love.

al″i-sep′tal, 1 al″ı-sep′təl; 2 ăl″ı-sĕp′tal. **I.** *a.* Of or pertaining to lateral expansions of the nasal septum, as in the skull of an embryonic bird. **II.** *n.* An aliseptal cartilage. [< L. *ala*, wing, + SEPTAL¹.]

al′ish, 1 ēl′ish; 2 ăl′ish, *a.* Somewhat like ale; as, an *alish* taste.

A-lis′ma, 1 ə-lis′mə; 2 a-lis′ma, *n. Bot.* **1.** A widely distributed genus of perennial herbs of the water-plantain family (*Alismaceæ*). The corm-like tubers of *A. plantago* are said to be eaten by the Kalmucks. **2.** [a-] Any plant of this genus. [< Gr. *alisma*, plantain.] — **a-lis′mal**, *a.*

Al″is-ma′ce-æ, 1 al″ıs-mē′sı-ī; 2 ăl″ıs-mā′çe-ē, *n. pl. Bot.* A family of aquatic or marsh-plants (order *Ntadales*) — the water-plantain family —having racemes or panicles of flowers with a double perianth of 3 persistent sepals and 3 deciduous petals, scape-like stems, and radical petiolate leaves. This family, containing about 13 genera and 70 species, is widely distributed throughout the temperate zone. Chief genera, *Alisma* and *Sagittaria*. [< ALISMA.] — **al″ısma′ceous**, *a.*

a-lis′mad, 1 ə-lis′mad; 2 a-lis′măd, *n.* A plant of the genus *Alisma*.

Al″is-ma′les, 1 al″ıs-mē′lız; 2 ăl″ıs-mā′lēz, *n. pl. Bot.* A former botanical alliance comprising marsh- or water-plants with usually unisexual flowers. It embraced the water-plantains and one or two others.

a-lis′moid, 1 ə-lis′moid; 2 a-lis′mŏid, *a. Bot.* Like an alismad, or water-plantain. [< ALISMA + -OID.]

Al′i-son, 1 al′ı-sən; 2 ăl′ı-son, *n.* **1. Archibald** (¹¹/₁₂1757–⁵/₁₁1839), a Scotch clergyman and author; *Nature and Principles of Taste*. **2. Sir Archibald** (¹²/₂₃1792–⁵/₂₂ 1867), a Scotch historian; son of Archibald; *History of Europe during the French Revolution*, etc. **3. William Pulteney** (1790–⁹/₂₂1859), a Scotch physician and physiologist. **4‡.** Alice.

al′i-son-ite, 1 al′ı-sən-ait; 2 ăl′ı-son-īt, *n. Mineral.* An indigo-blue cuproplumbite: a doubtful species. [< R. E. *Alison*.]

a-lisp′, 1 ə-lisp′; 2 a-lisp′, *adv.* & *a.* With a lisp; lisping.

al″i-sphe′noid, 1 al″ı-sfī′neid; 2 ăl″ı-sfē′nŏid, *a.* Of or pertaining to the greater wings of the sphenoid bone; as, the *alisphenoid* canal. See illus. under SPHENOID BONE. [< L. *ala* (see ALA) + SPHENOID.] **al″i-sphe-nol′dal‡.**

al″i-sphe′noid, *n.* A bone, separate in many animals and in the human fetus, forming in man the great wing and external pterygoid plate of the sphenoid bone.

a-list′, 1 ə-list′; 2 a-list′, *adv.* & *a. Naut.* In a canted or inclined position; listed over.

a-lit′ (Poet.), *imp.* & *pp.* of ALIGHT¹, *v.*

a-lite′t, *n.* A little: formerly written *a lite*.

al′i-trunk, 1 al′ı-trunk; 2 ăl′ı-trŭnk, *n. Entom.* The segment of the thoracic part of the body to which the wings are attached. [< L. *ala* + *truncus*; see ALA and TRUNK, *n.*]

al″i-tur′gi-cal, 1 al″ı-tûr′jı-kəl; 2 ăl″ı-tûr′ġi-cal, *a. Eccl.* Without a liturgy: said of days when the liturgy or eucharistic service is omitted. **al″i-tur′gic‡.**

a″li-un′de, 1 ē″lı-un′dē; 2 ä″lı-ŭn′dē. *adv.* [L.] *Law.* From a source extrinsic to the principal matter; *from* elsewhere; as, testimony to explain or contradict a written instrument from other sources than itself is evidence *aliunde*.

a-live′, 1 ə-laiv′; 2 a-līv′, *a.* **1.** In a living state, or a state in which the organs perform their functions; having life: said of organisms: opposed to *dead*; as, the tree is *alive* even in winter; is your father yet *alive*?

Ah, what shall I be at fifty Should Nature keep me *alive*,
If I find the world so bitter When I am but twenty-five?
TENNYSON *Maud* vi, st. 5.

2. In action, motion, or existence; in force or operation; in full vigor; as, to keep the fire *alive*; his love was still *alive*. **3.** In lively action; in an animated state; sprightly; as, *alive* with enthusiasm. **4.** In a condition of attentiveness, sensitiveness, or susceptibility; open to impressions; as, *alive* to human interests; *alive* to pain.

She was *alive* to anything that gave her an opportunity for active sympathy. ELIOT *Middlemarch* ch. 20, p. 192. (H. & co. 1888.)

5. Abounding in life or living things, or in evidences of life; as, the hive was *alive* with bees.

Every stone is *alive* with purpose.
BURROUGHS *Signs and Seasons* p. 281. (H. M. & co. 1886.)

6. Of any or all living; as, he is the most eloquent man *alive*. **7.** *Print.* Same as LIVE: erroneous use.

Alive is used colloquially and provincially as an intensive; as, man *alive*! sakes *alive*! [< AS. *on life*; *on*, in; *life*, dat. of *lif*; see LIFE.]

Syn.: active, alert, animate, animated, breathing, brisk, existent, existing, live, lively, living, quick, subsisting, vivacious. *Alive* applies to all degrees of life, from that which shows one to be barely *existing* or *existent* as a living thing, as when we say he is just *alive*, to that which implies the very utmost of vitality and power, as in the words "he is all *alive*," "thoroughly *alive*." So the word *quick*, which began by signifying "having life," is now mostly applied to energy of life as shown in swiftness of action. *Breathing* is capable of like contrast. We say of a dying man, he is still *breathing*; or we speak of a *breathing* statue, or "*breathing* and sounding, beauteous battle," TENNYSON *Princess* can. v, l. 155, where it means having, or seeming to have, full and vigorous breath, abundant life. See ACTIVE; ALERT; ENERGETIC; NIMBLE; etc.— Ant.: dead, defunct, dispirited, dull, inanimate, lifeless, spiritless.— Prep.: alive *in* every nerve; alive *to* every noble impulse; alive *with* fervor, hope, resolve; alive *through* all his being.

— **look alive**, make haste; be lively.

al″i-vin′cu-lar, 1 al′ı-vin′kiu-lər; 2 ăl″ı-vin′cū-lar, *a. Zool.* Possessing a short transverse ligament: said of various bivalves. [< L. *ala*, wing, + *vinculum*, band.]

A″li-wal′, 1 ɑ″lı-wäl′; 2 ä″lı-wäl′, *n.* A village in Punjab, India; scene of British defeat of the Sikhs, Jan. 28, 1846.

A″li-wal′ North. A health resort in the Cape of Good Hope, S. W. of the Province of the Orange Free State; sulfur springs; occupied by Free State troops Nov. 14, 1899.

a-liz′a-rin, } 1 ə-liz′ə-rin; 2 a-liz′a-rĭn, *n. Chem.* **1.**
a-liz′a-rine, } An orange-red crystalline coloring compound ($C_{14}H_8O_4$): used to dye cotton, wool, and silks various shades of red. **2.** A compound of anthrapurpurin, flavopurpurin, and alizarin used in dyeing. **alizarin yellow‡.** **3.** Any dye derived from anthracene. It was formerly obtained from madder, but is now derived from anthracene. [< F. *alizarine*, < *alizari*, madder.] **a-laz′a-rine‡.**— **alizarin dyes**, a group of dyes derived from anthracene, embracing **a. carmine, green, red**, and **yellow** in various hues. **a. colors‡.**— **commercial a.**, same as PINCOFFIN.— **a-liz′a-rate**, *n.* A salt of alizarin.— **al″iza′ri**, *n.* Madder: so called in the Levant.— **al″i-zar′ic** *a.* Of, pertaining to, or obtained from madder.— **alizaric acid**, phthalic acid.

al-ja′ma, 1 al-hā′ma; 2 äl-hä′mä, *n.* [Sp.] **1.** A medieval Jewish community or congregation in Spain. **2.** A Jewish or Moorish school, locality, or synagog.

al″ja-ma′do, 1 al″ha-mā′do; 2 äl″hä-mä′do, *n.* A member or an inhabitant of an aljama.

al″ja-mi′a, 1 al″ha-mī′a; 2 äl″hä-mī′ä, *n.* **1.** The language of the Spanish Jews and Moors. **2.** The Spanish language written in Arabic or Hebrew letters.

al-ja″mi-a′do, 1 al-hā″mı-ā′do; 2 äl-hä″mı-ä′do. [Sp.] **I.** *a.* Pertaining to aljamia. **II.** *n.* A person who uses aljamia; also, something written in aljamia.

al-ji′bar, 1 al-hī′bar; 2 äl-hī′bär, *n.* [Sp. Am.] A cistern or reservoir for rain-water. **al-ji′bet** [Sp.].

al-jo′ba, 1 al-jō′ba; 2 äl-jō′ba, *n.* Same as JUBHA.

alk¹, 1 alk; 2 älk, *n.* An oleoresin obtained in North Africa from the terebinth (*Pistacia terebinthus*), and known in its liquid form as **Chian turpentine.** [< Ar. *'alk.*] **alk′-gum″‡.**

alk², *n.* [Dial., Eng.] The black-billed or razor-billed auk.

al′ka-hest, 1 al′kə-hest; 2 ăl′ka-hĕst, *n. Alchemy.* An imaginary liquid, reputed to be a universal menstruum, capable of resolving all bodies into their constituent elements. [Prob. invented by Paracelsus.] **al′ca-hest‡.**— **al″ka-hes′tic, al″ka-hes′ti-cal**, *a.*

al″ka-ken′gi, *n.* Same as ALKEKENGI.

al″ka-lam′id, } 1 al″kə-lam′id; 2 ăl″ka-lăm′id, *n.* A
al″ka-lam′ide, } compound in which two or more of the hydrogen atoms of ammonia have been replaced by acid and base radicals. [< ALKALI + AMID.] **al-kal′i-mide‡.**

al″ka-les′cent, 1 al″kə-les′ent; 2 ăl″ka-lĕs′ĕnt. **I.** *a.* Tending to become or becoming alkaline; slightly alkaline. **II.** *n.* An alkalescent compound.— **al″ka-les′cency**, *n.* A tendency to become alkaline; slight alkalinity. **al″ka-les′cence‡.**

al′ka-li, 1 al′kə-lai *or* -lı; 2 ăl′ka-lī *or* -lı (XIII), *n.* [-LIS or -LIES, 1 -laiz *or* -lız; 2 -līş *or* -lış, *pl.*] **1.** *Chem.* A compound of hydrogen and oxygen with any one of the elements lithium, sodium, potassium, rubidium, and cæsium, or the radical ammonium, characterized by great solubility in water and capability of neutralizing acids: popularly extended to anything that will neutralize an acid, as lime, magnesia, etc.

Aqueous solutions of the alkalis act corrosively on animal and vegetable substances, and also alter the tint of many coloring-matters, as red litmus, which they turn blue.

2. A saline product of the lixiviation of the ashes of sea-plants that contain sodium and potassium in combination; soda-ash. **3.** Any form of alkaline substance used in the arts, as either the hydroxid or carbonate of sodium, potassium, or ammonium. **4.** The saltwort (*Salsola kali*). [< F. *alcali*, < Ar. *al-qaliy*, < *al*, the, + *qaliy*, ashes of saltwort, < *qalay*, fry.] **al′ca-li‡; al′ca-ly‡.**

— **al′ka-li-flat″**, *n.* An arid plain, permeated or incrusted with alkaline salts, the bed of an evaporated lake.— **a. grass**, *n.* A grass of the genus *Distichlis*, especially *D. maritima*, growing in the alkaline soil of the western United States.— **a. land**, *n.* A region (as in parts of Wyoming, Nebraska, and Montana) marked by the presence of alkali in the soil and on the surface.— **a. soil**, a soil containing

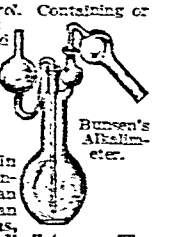
an unusual amount of soluble mineral salts. It frequently collects on the surface under arid conditions and excessive evaporation, and forms a saline crust. The salts are principally chlorids, sulfates, carbonates, and bicarbonates of sodium, potassium, magnesium, and calcium, and, sometimes, borates and nitrates.

The alkali, or soluble salts, is derived from the deterioration of inland lakes or basins, or is due directly to the liberation of soluble salts in the decomposition of the rocks from which the soil is derived, under arid conditions where the rainfall is too slight to remove the salts as they are formed. Milton Whitney (U. S. Bureau of Soils) in *Letter to Standard Dict.* Sept. 30, '01.

—a.-stiff, *n.* A stiffening mixture of sal-soda and shellac, used in making cheap hats.—**a. waste,** same as SODA-WASTE.—**black a.** [Local, U. S.], a strongly alkaline substance formed by the action of sodium carbonate on the humus of soils, and very injurious to crops.—**fixed a.,** an alkali, as soda or potash, of the alkaline metals.—**vegetable a.,** an alkaloid.—**volatile a., ammonia.**—**white a.,** the product obtained from soda-ash during the manufacture of carbonate of soda by the Leblanc process, dissolved in water, clarified, and freed from moisture by evaporation. **refined a.†.**

—al'ka-lif'er-ous, *a.* Abounding in or containing alkalis.—**al'ka-li-fy,** *v.* **I.** *t.* To change into an alkali; cause to become alkaline. **II.** *i.* To become alkaline or an alkali.—**al'ka-li-fi'a-bl(e),** *a.*—**al'ka-li-gen,** *n.* Nitrogen: originally so called from the fact of its being the chief constituent of the volatile alkali ammonia.—**al'ka-lig'e-nous,** *a. Chem.* Generating or forming alkali, or giving alkaline properties.—**al'ka-lim'e-ter,** *n.* A burette employed in the volumetric analysis of alkaline solutions by the use of a standard solution of acid. **al'ca-lim'e-ter;.—al'ka-lim'e-try,** *n.* The determination of the percentage of alkali in a mixture or solution, usually volumetrically, by means of a standard acid solution. **al'ca-lim'e-try;.—al'ka-li-met'ri-cal,** *a.*—**al'ka-li-met'ri-cal-ly,** *adv.*—**al-ka-lim'id,** *n.* See ALKALAMID.

al-kal'ic, 1 al-kal'ik; 2 ăl-kăl'ic, *a. Petrol.* Containing or characterized by a considerable amount of the alkaline bases, especially potash and soda; as, *alkalic* feldspar. [< ALKALI.]



Bunsen's Alkalimeter.

al'kal-i-cal'cic, 1 al'kal-i-kal'sik; 2 ăl'kăl-i-căl'cic, *a. Petrol.* Containing or characterized by nearly equal amounts of the alkaline bases, as soda or potash, and of lime; as, *alkalicalcic* feldspar. [< ALKALI + CALCIC.]

al'ka-line, } 1 al'ka-loin *or* -lin; 2 ăl'ka-lin
al'ka-lin', } *or* -lin (xim), *a.* Of, pertaining to, or having the characteristics of an alkali; containing or produced by an alkali. **al'ka-li-rate†.—alkaline earths, metals,** etc., see the nouns.—**al'ka-lin'i-ty,** *n.* The state or quality of being alkaline.—**al'ka-li-nu'ri-a,** *n. Pathol.* An alkaline state of the urine.

al'ka-lize, 1 al'ka-loiz; 2 ăl'ka-liz, *vt.* [-LIZED; -LIZ'ING.] To convert into alkali; make alkaline. [< F. *alcaliser*, < *alcali*; see ALKALI.] **al'ka-lin-ize";; al'ka-lise†; al'ka-li-rate†.—al'ka-li'a-bl(e",** *a.* That may be alkalized. **al'ka-lis'a-bl(e";.—al'ka-li-za'tor -sa'tion,** *n.* The act or process of alkalizing or of rendering alkaline.

al'ka-loid, 1 al'ka-loid; 2 ăl'ka-lŏid, *a.* Of, pertaining to, or like an alkali; containing an alkali or alkaloid.

al'ka-loid, *n.* Any nitrogenous organic base, especially one of vegetable origin, having a powerful toxic effect on the animal economy, as strychnin or morphin.

Alkaloids are colorless, crystallizable, insoluble in water, combine with acids without eliminating water, yield brilliant colorreactions with certain reagents, and rotate the plane of polarized light. They are largely used in medicine. [< ALKALI + -OID.]—**cadaveric alkaloids,** ptomains.

al'ka-loi'dal, 1 al'ka-loi'dal; 2 ăl'ka-lŏi'dal, *a.* **1.** Of, pertaining to, or like an alkaloid.

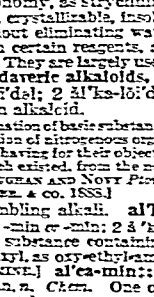
The knowledge of the formation of basic substances (Ptomaines) in the presence of putrefaction of nitrogenous organic matter, led to a series of investigations having for their object the isolation of any *alkaloidal* bodies, if such existed, from the normal living tissues of the organism. Vaughan and Novy *Ptomaines and Leucomaines* ch. 7, p. 258. [n. ed. & co. 1888.]

2. Containing or resembling alkali. **al'ka-loid;.**

al'ka-min, } 1 al'ka-min, -min *or* -min; 2 ăl'ka-min, -min *or*
al'ka-mine, } -min, *n.* A substance containing both amidogen and alcoholic hydroxyl, as oxyethylamin ($C_2H_4(OH)NH_2$). [< ALCOHOL + AMINE.] **al'ca-min;; al'ca-mine;.**

al'kane, 1 al'kān; 2 ăl'kān, *n. Chem.* One of the methane series. [< *-ane* in ALCOHOL.]

al'ka-net, 1 al'ka-net; 2 ăl'ka-nĕt, *n.* **1.** The root of a plant (*Alkanna tinctoria*), yielding a red coloring-matter. **2.** The plant *Alkanna tinctoria*. **3.** One of several similar dye-producing plants of other genera; as, European *alkanet* (*Anchusa officinalis*); evergreen *alkanet* (*Anchusa sempervirens*); in America, the puccoon (*Lithospermum canescens*). **4.** Anchusin. [< Sp. *alcanda*, dim. of *alcana*, < Ar. *al-hinnā*, < *al*, the, + *hannā*, henna.]—**bastard alkanet,** same as WHEAT-THIEF.



European Alkanet.

Al-kan'na, 1 al-kan'a; 2 ăl-kăn'a, *n. Bot.* A genus of Mediterranean and Oriental perennial herbs of the borage family, including the alkanet. [NL. for ALKANET.]

al-kan'nin, 1 al-kan'in; 2 ăl-kăn'in, *n. Chem.* Same as ANCHUSIN.

al-kap'ton, *n.* Same as ALCAPTON.

al-kap'to-nu'ri-a, *n.* Same as ALCAPTONURIA.

al-kar'gen, 1 al-kär'jen; 2 ăl-kär'jĕn, *n. Chem.* Cacodylic acid. [< ALKARSIN + OXYGEN.]

al-kar'sin, 1 al-kär'sin; 2 ăl-kär'sin, *n.* The poisonous poisonous liquid containing cacodyl and its oxidation products; Cadet's fuming liquid. [< ALKALI + ARSENIC.] **al-car'sin†; al-kar'sinet.**

al'ke-ken'gi, 1 al'ki-ken'ji; 2 ăl'ke-kĕn'gi, *n. Bot.* The strawberry or husk-tomato (*Physalis alkekengi*) of the nightshade family (*Solanaceæ*), a native of southern Europe, with a scarlet fruit: winter-cherry. [L., < Ar. *al-kākanj*, < *al*, the, + Per. *kākanj*, a resin.]

al-ken'na, 1 al-ken'a; 2 ăl-kĕn'a. The plant henna.

al-ker'mes, 1 al-kĕr'miz; 2 ăl-kĕr'mĕz, *n.* **1.** A once famous red cordial made from the kermes-insect (*Coccus ilicis*) (formerly supposed to be a berry) and other ingredients. **2.** The kermes. [F., < Ar. *al-qirmiz*, < *al*, the, + *qirmiz*; see KERMES.]

al'kid, 1 al'kid; 2 ăl'kid, *adv.* [AM. Ind.] By and by; presently: Chinook motto on the seal of the State of Washington.

al'kid, } 1 al'kid, -kid *or* -knid; 2 ăl'kid, -kid *or* -kĭd, *n.*
al'kide, } *Chem.* A substance formed of an alkyl and generally a metal; as, the *alkids* of zinc. [< ALKYL.]

al'kine, } 1 al'kin, -kin *or* -kin; 2 ăl'kin, -kin *or* -kin, *n.*
al'kine, } *Org. Chem.* **1.** One of the alkamins. **2.** One of the acetylene series. [< *alc-* in ALCOHOL.]

al'ki-to"tle, *n.* [Prov. Eng.] A silly fellow; simpleton.

Alk'maar, 1 ălk'mar; 2 ălk'mär, *n.* **1. Helmrich von,** or **Hendrick van,** a reputed German poet (15th cent.) who translated or adapted *Reynard the Fox*. **2.** A town in the Netherlands; withstood siege by Spain in 1573, and scene of the defeat of the Duke of York, by the French, Oct. 6, 1799.

al'ko-ol, 1 al'ko-el; 2 ăl'co-ŏl, *n.* A black powder, probably subnite of antimony sulfid, used by Oriental women to color the eyelids. [< Ar. *al-kuḥ'l*; see ALCOHOL.]

Al'ko-ran', **Al'ko-ran'ic, -ish.** Same as ALCORAN, etc.

alk-or'id, } 1 alk-ŏrs'id, -id *or* -eid; 2 ălk-ŏrs'id, -id *or* -ĭd, *n.*
alk-or'ide, } An alcohol in which the hydrogen of the hydroxyl group is replaced by a metallic base; as, sodium *alkorid* (CH_2NaO). [< ALCOHOL + OXID.]

al'kyl, 1 al'kil; 2 ăl'kyl, *n. Chem.* Any univalent alcohol radical, as methyl (CH_3), propyl (C_3H_7), etc., theoretically derivable from a saturated hydrocarbon, as methane (CH_4), propane (C_3H_8), etc., by removal of one hydrogen atom. [< ALCOHOL + -YL.]—**al'kyl-am'in,** *n. Org. Chem.* One of the amins formed when hydrogen in ammonia is replaced by an alkyl, as methylamin, etc. **al'kyl-am'ine†.**

al'ky-la'tion, *n. Chem.* The union of an alkyl group or alkyl groups with a compound.—**al'ky-lene,** *n. Org. Chem.* One of the ethylenes; an olefin.—**al'ky-lic,** *a.* Of or pertaining to alkyl.—**al'ky-lize,** *vt.* [-LIZED; -LIZ'ING.] *Chem.* To introduce alkyl groups into by substitution.—**al-kyl'o-gen,** *n. Chem.* A haloid salt of an alcohol radical.

all, 1 ēl; 2 al, *a.* **1.** The entire quantity or extent of, taken as a whole in substance, space, time, degree, etc.; as, *all* America; *all* the way down; *all* day; take it *all*. **2.** The entire number of, all the individuals being taken together: with a plural or collective noun; as, *all* the army was in winter quarters; *all* men. **3.** The entire number of, each individual or member being taken separately; every one of: used distributively; as, *all* men are mortal.

All mankind's concern is charity. Pope *Essay on Man* ep. III, l. 308.

All thoughts, *all* passions, *all* delights, . . .
All are but ministers of Love. Coleridge *Genevieve* st. 1.

4. As much as possible, the utmost possible; as, I say it in *all* kindness.

I in *all* haste was sent. Shakespeare *Richard III.* act iv, sc. 1.

5. Any whatever; as, in *all* events; beyond *all* question.

Things without *all* remedy Should be without regard.
Shakespeare *Macbeth* act iii, sc. 2.

6. Much, most, or very many of: a hyperbolic use; as, *all* the people said amen: *all* the town was ablaze.

At Exeter *all* Devonshire had been gathered together.
Macaulay *England* vol. i, ch. 5, p. 453. [r. s. & co. 1849.]

7. Nothing except; alone; as, he was *all* skin and bones.

When *all* is used in negative sentences, *not* is often misplaced, so as to contradict the sense intended, or to make it ambiguous; as, *all* will not go, that is, *not all* will go—meaning some will and some will not go. "*All* were not of that mind" = (probably) *not all* were of that mind, or (possibly) *all* were of a different mind or minds from the one spoken of. So, also, when *all* is used substantively. "*All* that glisters is not gold" = *not all* that glisters is gold. [< AS. *eall*, < √*al*, nourish, + participial suffix *-na*; cp. Goth. *alls*.] Syns: see ENTIRE; EVERY.

—all aboard, see under ABOARD.—**all'bone",** *n.* The stitchwort (*Stellaria holostea*), of the pink family (*Caryophyllaceæ*).—**all-fired.** [Colloq., and possibly a corruption of *hell-fired*.] **I.** *a.* Excessive in amount or degree; propidious; inordinate; as, an *all-fired* hurry. **II.** *adv.* Excessively; extremely.—**all-fredly,** *adv.* Monstrously; to great excess.—**all-fires,** *n.* **1.** A card game resembling all-fours. **2.** Same as MUGGINS. **3.**—**all fours,** the four legs of a quadruped or the arms and legs of a human being; chiefly in the phrase *on all fours*.—**all-fours,** *n.* A game of cards: so called from the four points (high, low, jack, and game) that are at stake.—**all'good",** *n. Bot.* The herb good-King-Henry.—**all hail,** all health: a friendly salutation and hearty greeting. See HAIL, *interj.*

All hail to the rains, the rocks, and the shores!
Montgomery *The Ocean* st. 1.

—all-hail, *vt.* To welcome with the exclamation *all hail!*—**all hands,** a crew or company entire.—**all-heeled,** *a.* [So. & W. U. S.] Fully prepared; fit.—**all in.** [Slang, U. S.] **1.** Physically weary; tired out. **2.** Out of funds; penniless.—**all might,** omnipotence.—**all my eye and Betty Martin** [Prov. Eng.], fanciful; imaginary. See ALL IN ONE'S EYE, under EYE†, *n.*—**all-night",** *a.* A service of food, fuel, or light for the whole night.—**All-one,** *a.* & *n.* At once all and one: said of God.—**all other,** everything else, especially of the same kind.—**all out.** **1.** Entirely; completely. **2.** [Colloq., U. S.] Out of harmony with the facts; all abroad. **3.** [Slang, U. S.] Done up; fatigued.—**all-overs,** *n. pl.* [So. U. S.] The fidgets.—**all sorts of** [Local, U. S.], not easily classified; not to be summed up or characterized in the ordinary phrases; as, an *all sorts of a fellow*; often in a bad sense.—**all that,** all the like: often used contemptuously; as, sentimentalism, gush, and *all that*.—**all told,** when all are counted or considered: as, there are seven of us *all told*.—**all work,** general or miscellaneous work; as, a maid of *all work*.—**and all,** and everything besides.—**for all,** in spite of; notwithstanding; as, it is true *for all* that.—**for all the world.** **1.** In every respect; precisely; as, he looks *for all the world* like a tramp. **2.** For the largest consideration; as, I wouldn't do it *for all the world*.

all, *n.* [In many of its substantive senses *all* approaches a pronominal use.] **1.** The whole collectively considered; the complete totality. (1) *Philos.* The whole taken absolutely: the entire sum of being considered as embodying the abstraction of unity; as, "*all* is God, and God is *all*."

All is an endless fleeting abstraction: the whole is a reality.
Coleridge *Table Talk* March 17, 1833.

(2) The whole relatively; the entire number or quantity of any class or group; as, he took *all*; he lost his *all*.

All is possible for those who dare to die!
Scott *Ivanhoe* p. 216. [r. & c.]

As a popular idiom *all of* is used to emphasize the totality of that which is referred to; as, "How many of those men did you see?" "I saw *all of* them." The best literary usage omits the *of* as needless, preferring "I saw them *all*," "I saw *all* (not *all of*) my friends once more."

(3) The whole of any class or set of circumstances, relations, or arrangements; everything concerned or involved; as, "*all* went merry as a marriage bell." Byron *Childe Harold* can. 3, st. 21.

2. The whole distributively considered; each and every person or thing; as, *all* were present. [See note under ALL, *a.*]—**after all,** everything else being considered; nevertheless.—**all and singular** (*Law*), all, without possibility of exception: all collectively and individually. **all and somet.**—**all in all,** on the whole; everything considered; altogether; as take it *all in all*, I prefer a middle course.—**at all,** in any way; to any degree or extent: in any event; whatever; as, he knows nothing *at all* about it; he may not go *at all*.—**before all,** in advance of every other; most important.—**beyond all,** in excess of every other.—**in all,** making up or including the whole; all told; as, there were twelve apostles *in all*.—**one for all,** once and no more; once and finally; once as answering all purposes; as, "he sold *one for all*."—**two or twos** (three, four, etc.) **all,** two (three, four, etc.) points for each: an expression used in many games, especially lawn-tennis.—**when all comes to all,** when all is known, explained, or considered.

all, *adv.* **1.** In complete or highest degree; wholly; entirely, quite: as, *all* over the house: *all* too dear.

Thoughts so *all* unlike each other.
Coleridge *Christabel* pt. ii, con.

2. At the exact time or place: just; even; as, *all* as the day began to break.

All in our marriage garden Grew . . . a bonnier flower.
Gerald Massey *Over Wee White Rose* st. 1.

3†. Only, exclusively; alone: by ellipsis used as a conjunction equivalent to *altho*.

The adverb *all* is erroneously used by old writers, combined with *to*, in such phrases as *all to burst*, *all to broken*, etc., in the adverbial sense of *wholly, completely*.

—all along. **1.** All the time; in the whole; throughout. **2.** *Bookbinding.* With the thread passing through from end to end, or directly between the most distant punctures; as, the book is sewed *all along*.—**all but,** as nearly as possible; so near fulfilment as to be practically fulfilled; almost.—**all hollow** [Colloq.], entirely; completely; as, to beat one *all hollow*.—**all in the wind.** **1.** *Naut.* In line with the wind, so as not to draw: said of the sails of a ship. **2.** [Colloq.] Puzzled; perplexed; confused.—**all of,** see ALL, *n.* 1. (2).—**all of a sudden** [Colloq.], very suddenly.—**all one,** or **as one,** the same; of no consequence; indifferent: imitation of German *alles eins*: common in Pennsylvania and the West: as, do as you please, it is *all one* to me.—**all over.** **1.** [Colloq.] In all parts; as, I searched for him *all over*. **2.** Gone by; as, the storm is *all over* sometimes, in this sense, *all over with*. **3.** [Colloq.] Exactly; completely; thoroughly; as, he is his father *all over*.—**all-overish,** *a.* [Colloq.] Having a vague sense of discomfort in the whole system; somewhat affected in every part.—**all-overishness,** *n.*—**all right.** **1.** Quite correct; satisfactorily. **2.** In railroading, a signal as by voice, hand, or lantern, allowing a train to start.—**all round,** in all quarters; all around.—**all the better,** so much the better; as, if he come early, *all the better*.—**all the go,** or **all the rage** [Colloq.], in the height of fashion. See GO and RAGE.—**all the same,** without difference; identically; notwithstanding; as, I shall go *all the same* if it does storm.—**all to pieces,** or **to smash.** [Colloq.] **1.** Broken, as if into pieces; shattered in mind and body. **2.** Totally; out and out; as, "I beat him *all to pieces* last night at euchre," means very badly, or (in gambling) till he had no more money to bet.—**all up** [Colloq.], in a ruined condition; at an end; as, the game is *all up*.—**you all** [Colloq., So. U. S.], all persons present: used frequently as a single slurred word, and in addressing one person: as, "Will *you all* come with us?"

All is used as the first element of self-explaining compounds—(1) Adverbially, meaning altogether, wholly: as,

3†. To lay down; lay aside; put down; annul. **4†.** To temper, as metal.

II. *i.* [Archaic.] To grow calm; subside. [< A-, away, + AS. *lecgan;* see LAY, *v.*] — **al-lay'†,** *n.*

Syn.: alleviate, appease, calm, compose, mollify, pacify, quiet, soothe, still, tranquilize. *Allay* and *alleviate* are closely kindred in signification, and have been often interchanged in usage. But, in strictness, to *allay* is to lay to rest, *quiet,* or *soothe* that which is excited; to *alleviate,* on the other hand, is to lighten a burden. We *allay* suffering by using means to *soothe* and *tranquilize* the sufferer; we *alleviate* suffering by doing something toward removal of the cause, so that there is less to suffer; where the trouble is wholly or chiefly in the excitement, to *allay* the excitement is virtually to remove the trouble; as, to *allay* rage or panic; we *alleviate* poverty, but do not *allay* it. *Pacify,* directly from the Latin, and *appease,* from the Latin through the French, *signify to bring to peace; to mollify is to soften; to calm, quiet,* or *tranquilize* is to make still; *compose,* to place together, unite, adjust to a calm and settled condition; to *soothe* (originally to assent to, humor) is to bring to pleased quietude. We *allay* excitement, *appease* a tumult, *calm* agitation, *compose* our feelings or countenance, *pacify* the quarrelsome, *quiet* the boisterous or clamorous, *soothe* grief or distress. See ALLEVIATE; SETTLE.— Ant.: agitate, arouse, excite, fan, kindle, provoke, rouse, stir, stir up.— **al-lay'er,** *n.*— **al-lay'ment,** *n.*

[< LL. *adlegio,* clear (confused in meaning with L. *allego,* allege), < Norman F. *aligier,* < OF. *esligier,* < L. *ex,* out, + *litigo;* see LITIGATE.] **al-ledge'†.**

Syn.: adduce, advance, affirm, assert, asseverate, assign, aver, cite, claim, declare, introduce, maintain, offer, plead, produce, say, state. To *adduce,* literally to lead to, is to bring the evidence up to what has been *alleged. Adduce* is a secondary word; nothing can be *adduced* in evidence till something has been *stated* or *alleged,* which the evidence is to sustain. An *alleged* fact stands open to question or doubt. To speak of an *alleged* document, an *alleged* will, an *alleged* crime, is either to question, or at least very carefully to refrain from admitting, that the document exists, that the will is genuine, or that the crime has been committed. *Alleged* is, however, respectful; to speak of the "so-called" will or deed, etc., would be to cast discredit upon the document, and imply that the speaker was ready to brand it as unquestionably spurious; *alleged* simply concedes nothing, and leaves the question open. To *produce* is to bring forward, as, for instance, papers or persons. *Adduce* is not used of persons; of them we say *introduce* or *produce.* When an *alleged* criminal is brought to trial, the counsel on either side are accustomed to *advance* a theory, and *adduce* the strongest possible evidence in its support; *they will produce documents and witnesses, cite* precedents, *assign* reasons, *introduce* suggestions, *offer* pleas. The accused will usually *assert* his innocence. See AFFIRM; ASSERT.— **al-lege'a-bl(e)†,** *a.*— **al-lege'ment,** *n.* Allegation. — **al-leg'er,** *n.*

Syn.: fable, fiction, illustration, metaphor, parable, simile. In modern usage we may say that an *allegory* is an extended *simile,* while a *metaphor* is an abbreviated *simile* contained often in a phrase, perhaps in a word. An *illustration* carries its comparison on the surface, in the words *as, like,* or similar expressions; the *metaphor* is given directly without any note of comparison. The *allegory, parable,* or *fable* tells its story as if true, leaving the reader or hearer to discover its fictitious character and learn its lesson. All these are, in strict definition, *fictions;* but the word *fiction* is now applied almost exclusively to novels or romances. An *allegory* is a moral or religious tale, of which the moral lesson is the substance, and all descriptions and incidents but accessories, as in *The Pilgrim's Progress.* A *fable* is generally briefer, representing animals as the speakers and actors, and commonly conveying *some* lesson of practical wisdom or shrewdness, as *The Fables of Æsop.* Any comparison, analogy, instance, example, tale, anecdote, or the like which serves to let in light upon a subject may be called an *illustration,* this word in its widest use including all the rest. A *parable* is exclusively moral or religious, briefer than an *allegory,* with its lesson more immediately discernible, given, as it were, at a stroke. See FICTION; STORY.— Ant.: chronicle, fact, history, narrative, record.

2. [Rare.] To represent as less, or less grave; extenuate; as, to *alleviate* a fault. [< LL. *alleviatus,* pp. of *allevio,* < L. *allevo,* < *ad,* to, + *levis,* light.]

Syn.: abate, assuage, lessen, lighten, mitigate, moderate, palliate, reduce, relieve, remove, soften. Etymologically, to *alleviate* is to lift a burden toward oneself, and so *lighten* it for the bearer; to *relieve* is to lift it back from the bearer, nearly or quite away; to *remove* is to take it away altogether. *Alleviate* is thus less than *relieve; relieve,* ordinarily, less than *remove.* We *alleviate, relieve,* or *remove* the trouble; we *relieve,* not *alleviate,* the sufferer. *Assuage* is, by derivation, to sweeten; *mitigate,* to make mild; *moderate,* to bring within measure; *abate,* to beat down, and so make less. We *abate* a fever; *lessen* anxiety; *moderate* passions or desires; *lighten* burdens; *mitigate* or *alleviate* pain; *reduce* inflammation; *soften, assuage,* or *moderate* grief; we *lighten* or *mitigate* punishments; we *relieve* any suffering of body or mind that admits of remedy. *Alleviate* has been often confused with *allay.* See ABATE; ALLAY.— Ant.: aggravate, augment, embitter, enhance, increase, intensify, magnify, make worse.

[< OF. *aliance,* < LL. *alligantia,* < L. *alligo;* see ALLY, *v.*]

Syn.: coalition, compact, confederacy, confederation, federation, fusion, league, partnership, union. *Partnership* is a mercantile word; *alliance* chiefly political or matrimonial. *Coalition* is oftenest used of political parties; *fusion* is now the more common word in this sense. In an *alliance* between nations there is no surrender of sovereignty, and no *union* except for a specified time and purpose. *League* and *alliance* are used with scarcely perceptible difference of meaning. In a *confederacy* or *confederation* there is an attempt to unite separate states in a general government without surrender of sovereignty. *Union* implies so much concession as to make the separate states substantially one. *Federation* is a poetic and rhetorical word expressing something of the same thought, as in Tennyson's "*federation* of the world." *Locksley Hall* l. 128. The United States is not a *confederacy* nor an *alliance;* the nation might be called a *federation,* but prefers to be styled a federal *union.* See ASSOCIATION; KIN.— Ant.: antagonism, discord, disunion, divorce, enmity, hostility, secession, separation.— Prep.: alliance *with* a neighboring people; *against* the common enemy; *for* offense and defense; alliance *of, between,* or *among* nations.

2. Specif., the regular recurrence of an initial letter or sound in the accented parts of words in poetry; initial rime. See ALLITERATIVE VERSE.

Alliteration was the characteristic principle of Anglo-Saxon, Icelandic, and Old Teutonic (Old Saxon, etc.) verse. It occurs also in later verse, as in *Piers Plowman*, and, more or less modified, in Chaucer, Spenser, Swinburne, etc. Alliterative phrases, such as *might* and *main*, *life* and *limb*, *watch* and *ward*, etc., are numerous in English. Like consonants and like and unlike vowels alliterate.

al"lo-phan-am'id, 1 al"o-fan-am'id; 2 ăl'o-făn-ăm'id, *n.* Same as BIURET. [A salt of allophanic acid.

al-loph'a-nate, 1 a-lef'ə-nēt; 2 ă-lŏf'a-nāt, *n. Chem.*

al"lo-phane, 1 al'o-fēn; 2 ăl'o-făn, *n. Mineral.* An amorphous, usually sky-blue, hydrous aluminum silicate ($Al_2SiO_5+5H_2O$). [< Gr. *allophanēs*, < *allos*, other, + *phainō*, make appear.]

al"lo-phan'ic, 1 al"o-fan'ık; 2 ăl"o-făn'ic, *a. Chem.* Of or pertaining to that which is changeable in appearance or color. [< Gr. *allophanēs*; see ALLOPHANE.] — **allophanic acid,** an unstable compound ($C_2H_4N_2O_3$) derived from cyanogen.

al"lo-phyl'i-an, 1 al"o-fil'ı-ən; 2 ăl"o-fĭl'i-an, *a. Philol.* Of another race or stock; alien; foreign: applied especially (1) to the prehistoric inhabitants of Europe, and (2) to unclassified non-Indo-European, non-Semitic tongues, such as the Turanian, Basque, Etruscan, etc.

After having striven to resuscitate *allophylian* races of Britain's prehistoric ages, by means of their buried arts, I found myself face to face with the aborigines of the New World.
D. WILSON *Prehistoric Man* ch. i, p. 6. [MACM. 1865.]

[< L. *allophylus*, < Gr. *allophylos*, < *allos*, other, + *phylē*, tribe, < *phyō*, produce.] **al"lo-phyl'ic‡; al-loph'y-lous‡.**

al"lo-phyl'i-an, *n.* One of different race or stock; an alien; especially, one not of Indo-European or Semitic stock. **al'lo-phyle‡.**

Al-loph'y-lus, 1 ə-lef'ı-lus; 2 a-lŏf'y-lŭs, *n. Bot.* A large genus of Old World tropical trees of the family *Sapindaceæ*, with usually compound leaves and white 4-merous flowers. The fruits of *Allophylus africanus* and a Brazilian species, *A. edulis*, are edible.

al-loph'y-toid, 1 a-lef'ı-toid; 2 ă-lŏf'y-tŏid, *n.* A bud whose fleshy scales become detached and grow as independent plants, as the bulbils in the tiger-lily. [< ALLO- + Gr. *phyton*, plant, + *eidos*, form.]

al"lo-plas-mat'ic, 1 al"o-plaz-mat'ık; 2 ăl"o-plăş-măt'ic, *a. Biol.* Of or relating to active organized constituents of living cells formed from protoplasm proper by differentiation, such as cilia, nerve-fibrillæ, muscle-fibrillæ, etc.

al'lo-plast, 1 al'o-plast; 2 ăl'o-plăst, *n. Biol.* An organ composed of different tissues: a term of Haeckel. [< ALLO- + Gr. *plassō*, form.] **al"lœ-or'gant.**

Al"lo-pos'i-dæ, 1 al"o-pes'ı-dī; 2 ăl"o-pŏs'i-dē, *n. pl. Conch.* A family of octopod cuttlefishes with a finless oval body and tapering arms moderately webbed. **Al-lop'o-sus,** *n.* (t. g.) [< ALLO- + Gr. *posos*, indefinite.] — **al-lop'o-sid,** *n.*— **al-lop'o-soid,** *a.*

al"lo-psy'chic, 1 al'o-sai'kık; 2 ăl'o-sī'cic, *a. Psychol.* Pertaining to a feeling of unreality of the outside world. [< ALLO- + PSYCHIC.]

al-lo'qui-al, 1 a-lō'kwı-əl; 2 ă-lō'kwi-al, *a.* [Rare.] Of or pertaining to the act or practise of talking to, but not with, another; given to or characterized by this practise. [< L. *alloquium*, address, < *ad*, to, + *loquor*, speak.] — **al-lo'qui-al-ism,** *n.* A form or manner of address.

all"-or'der-ing, etc. See ALL, *adv.*

Al-lo'ri, 1 al-lō'rı; 2 ăl-lō'ri, **Alessandro** (1535–1607). An Italian painter.

al"lor-rhyth'mi-a, 1 al'o-rith'mı-ə; 2 ăl'o-rĭth'mi-a, *n. Pathol.* Unusual irregularity of the pulse. [< ALLO- + RHYTHM.] **al"lo-rhyth'mi-a‡.**

Al"lo-sau'rus, 1 al'o-sō'rus; 2 ăl'o-sa'rŭs, *n.* A genus of dinosaurs, allied to the *Megalosaurus*, having short fore legs and long hind legs: found in the Upper Jurassic beds of Colorado.

al"lo-se-mat'ic, 1 al'o-sı-mat'ık; 2 ăl'o-se-măt'ic, *a.* Making use of the sematic colors of another animal for defense, as the sea-anemone (*Sagartia*), commonly found on the hermit-crab (*Pagurus*). See ANIMAL COLORS, under COLOR. [< ALLO- + SEMATIC.]

al-lot', 1 a-lot'; 2 ă-lŏt', *v.* [AL-LOT'TED; AL-LOT'TING.] **I.** *t.* **1.** To assign by or as by lot (a definite thing or part to a certain person); distribute as by authority, or in a manner not within the control of the recipient; as, to *allot* seats or shares. **2.** To appoint or assign by absolute authority, as one's place, lot, or destiny.

We are . . . placed upon earth to perform our *allotted* task.
LECKY *Hist. Eur. Morals* vol. ii, p. 44. [A. 1886.]

The hind . . . may not wander from the *allotted* field.
TENNYSON *Holy Grail* st. 60.

3. To set off or assign for a certain purpose; as, land *allotted* for a free library. **4.** [Local, U. S.] To reckon; think; as, I *allot* we must economize.

II. *i.* [Prov. Eng. & Local, U. S.] To expect; determine; intend, purpose: occasionally with *on* or *upon*.

[< F. *allotir*, < *à* (< L. *ad*), to, + *lotir*, allot, < *lot* lot, < LL. *lottum* (< OHG. *hloz*), lot.]

SYN.: appoint, apportion, assign, award, destine, distribute, divide, give, grant, mete out, portion out, select, set apart. A portion or extent of time is *allotted;* as I expect to live out my *allotted* time. A definite period is *appointed;* as, the audience assembled at the *appointed* hour. *Allot* may also refer to space; as, to *allot* a plot of ground for a cemetery; but we now oftener use *select, set apart,* or *assign. Allot* is not now used of persons. *Appoint* may be used of time, space, or person; as, the *appointed* hour; the *appointed* place; an officer was *appointed* to this station. *Destine* may also refer to time, place, or person, but it always has reference to what is considerably in the future; a man *appoints* to meet his friend in five minutes; he *destines* his son to follow his own profession. *Assign* is rarely used of time, but rather of places, persons, or things. We *assign* a work to be done and *assign* a man to do it, who, if he fails, must *assign* a reason for not doing it. That which is *allotted, appointed,* or *assigned* is more or less arbitrary; that which is *awarded* is the due requital of something the receiver has done, and he has right and claim to it; as, the medal was *awarded* for valor. See APPORTION.— ANT.: appropriate, confiscate, deny, refuse, resume, retain, seize, withhold.— PREP.: allot *to* a company *for* a purpose.

—**al-lot'ta-bl**(ᵉᵖ), *a.*—**al"lot-tee'**, *n.* The person to whom anything is allotted.—**al-lot'ten**, *a.* [Poet.] Allotted.—**al-lot'ter**, *n.* One who allots.—**al-lot'ter-y**, *n.* [Archaic.] Allotment.

al'lo-the"ism, 1 al'o-thī'izm; 2 ăl'o-thē'ĭsm, *n.* Worship of strange gods, or of other gods than Jehovah. [< ALLO- + THEISM.]

Al"lo-the'ri-a, 1 al'o-thī'rı-ə; 2 ăl'o-thē'ri-a, *n. pl.* A Mesozoic order of mammals, the multituberculates. [< ALLO- + Gr. *thēriŏn*, wild beast.]—**al"lo-the'ri-an**, *a.* & *n.*

al-loth'i-gene, 1 a-leth'ı-jīn; 2 ă-lŏth'ĭ-ğēn, *a. Geol.* Produced from elsewhere: said of the ingredients of clastic rocks, or of the clastic ingredients of any rock: contrasted with *authigene.* [< Gr. *allothi*, elsewhere, + -GENE.] **al-loth"i-ge-net'ic**; **al-loth"i-gen'ic**; **al"lo-tho-gen'ic**; **al"lo-thog'e-nous**†.—**al-loth"i-ge-net'i-cal-ly**, *adv.*

al-lot'ment, 1 a-let'ment *or* -mənt; 2 ă-lŏt'ment, *n.* **1.** The act of allotting; assignment by lot; distribution. **2.** That which is allotted; share; portion; specifically, that which comes or falls by supreme authority; destiny.

Our posterity . . . are here to . . suffer the *allotments* of humanity.
WEBSTER *Works, Bunker Hill* in vol. i, p. 59. [L. n. & co. 1864.]

3. A part or portion, as of land, apportioned for a specific purpose. [< F. *allotement*, < *allotir;* see ALLOT.] —**allotment certificate,** or **letter of a.,** a letter of advice to a shareholder or subscriber to shares in a registered company, acquainting him with the numbers of shares allotted him and dates when payments for them are due.—**a. note** or **ticket,** a writing by which a seaman directs the payment of a portion of his wages to some member of his family. —**a. system,** the allotting of land for cultivation and settlement. Specif.: (1) [Eng.] to the laboring classes at a small rental; (2) [U. S.] to Indians in exchange for tribal ownership of a reservation.

al-lot"ri-o-don'ti-a, 1 a-let'rı-o-den'shı-ə; 2 ă-lŏt'ri-o-dŏn'shi-a, *n. Pathol.* A tooth in an abnormal situation; also, the transplanting of teeth.

al-lot"ri-o-geus'ti-a, 1 a-let'rı-o-gīüs'tı-ə; 2 ă-lŏt'ri-o-ğūs'ti-a, *n. Pathol.* **1.** Perversion of the sense of taste. **2.** Abnormal appetite. [< Gr. *allotrios*, strange, + *geusis*, taste.] **al-lot"ri-o-geu'si-a**†.

al-lot"ri-o-mor'phic, 1 a-let'rı-o-mōr'fık; 2 ă-lŏt'ri-o-môr'fic, *a. Petrol.* Having a shape determined by preexisting surrounding crystals: said of the last-crystallized minerals in granular igneous rocks; xenomorphic; anhedral. [< Gr. *allotrios*, foreign, + *morphē*, form.]

al-lot"ri-oph'a-gy, 1 a-let'rı-ef'a-jı; 2 ă-lŏt'ri-ŏf'a-ğy, *n. Pathol.* An unnatural craving to eat things hurtful or unsuitable for food; depraved appetite. [< Gr. *allotrios*, foreign (< *allos*, other), + *phagein*, eat.]

al-lot'ri-ous, 1 a-let'rı-us; 2 ă-lŏt'ri-ŭs, *a.* Belonging to another; alien. [< Gr. *allotrios*, < *allos*, other.]—**allotrious factor** (*Math.*), a factor which must be removed from a remainder or quotient in forming the greatest common divisor.

al-lot"ri-u'ri-a, 1 a-let'rı-yū'rı-ə; 2 ă-lŏt'ri-yu'ri-a, *n. Pathol.* The presence of abnormal substances in the urine. [< Gr. *allotrios*, strange, + *ouron*, urine.]

al'lo-trope, 1 al'o-trōp; 2 ăl'o-trōp, *n.* One of the forms assumed by an allotropic substance; as, the diamond is an *allotrope* of carbon.

al"lo-troph'ic, 1 al'o-tref'ık; 2 ăl'o-trŏf'ic, *a.* **1.** *Physiol.* Changed in nutritive properties or value; rendered innutritious: said of nutritious albuminoids which, through molecular change, have become innutritious during digestion. **2.** *Bot.* Nourished wholly by another organism, as a saprophyte. [< ALLO- + Gr. *trophos*, nourishing.]

al"lo-trop'ic, 1 al'o-trep'ık; 2 ăl'o-trŏp'ic, *a. Chem.* Of, pertaining to, or having the property of allotropy. [< Gr. *allotropos*, < *allos*, other, + *trepō*, turn.] **al"lo-trop'i-cal**†.—**al"lo-trop'i-cal-ly**, *adv.*—**al"lo-tro-pic'i-ty**, *n.*

al-lot'ro-pism, 1 a-let'ro-pizm; 2 ă-lŏt'ro-pĭsm, *n.* The property, process, or principle of allotropy; allotropy.

I apprehend it is only moral *allotropism* in any case: different results from like materials by different treatment.
GEIKIE *Entering on Life, Companions* p. 46. [J. B. A. 1887.]

al-lot'ro-pize, 1 a-let'ro-pīz; 2 ă-lŏt'ro-pīz, *rt.* [-PIZED; -PIZ'ING.] [Rare.] To cause to undergo allotropy; make allotropic.

al-lot'ro-pous, 1 a-let'ro-pus; 2 ă-lŏt'ro-pŭs, *a.* **1.** *Entom.* Adapted slightly for pollinating flowers: said of insects. **2.** *Bot.* Adapted for pollination by certain insects: said of flowers.

al-lot'ro-py, 1 a-let'ro-pı; 2 ă-lŏt'ro-py, *n. Chem.* The variation in physical properties shown by elements or their compounds without change of chemical composition.

Allotropy. . . .custom has to some extent restricted its use to inorganic chemistry; the corresponding property of organic compounds being generally termed isomerism. Conspicuous examples are afforded by oxygen, carbon, boron, silicon, phosphorus, mercuric oxid and iodid. *Encyc. Brit.* 11th ed., vol. i, p. 704.

[< Gr. *allotropia*, < *allos*, other, + *tropos*, turn; see TROPIC¹, *a.*]

al"lo-tryl'ic, 1 al'o-trıl'ık; 2 ăl'o-trŷl'ic, *a. Pathol.* Relating to or resulting from the presence of a foreign substance: said of diseases. [< Gr. *allotrios*, strange, + *hylē*, wood.]

all' ot-ta'va, 1 al et-tā'vą; 2 ăl ŏt-tā'vă. [It.] *Mus.* **1.** At the distance of an octave: a direction in piano-music to indicate that it is to be played an octave higher or lower than written. **2.** In octaves: used in orchestral scores to indicate how one instrument has to play with another. **3.** Without chords; in unison: a direction in playing from a figured bass.

all"o'ver, 1 ēl'ō'vər: 2 ăl'ō'vər, *n.* A fabric of lace or other material having an embroidered pattern extending over its entire surface.

all"o'ver-ish, etc. See ALL, *adv.*

al-low', 1 a-lau'; 2 ă-low', *v.* [*Allow* derives its meanings from both Latin *allaudare*, to praise, and *allocare*, to place, stow. Since the 13th century it has, however, been regarded as one word, with the diversity of meaning to be expected from its supposed dual source.] **I.** *t.* **1.** To interpose no obstacle in the way of; suffer to act, occur, or exist; indulge; as, he *allows* no one to pass.

[He] *allows* himself in arch allusions or kind-hearted satire.
CHANNING *Works, Fénelon* p. 557. [A. U. A. 1883.]

2. To grant as a right, privilege, or share; allot; give; afford; as, he *allows* his daughter a stipend. **3.** To give consent to; approve; sanction; as, to *allow* an appeal; to *allow* an item in an account.

And the king . . . *Allowing* it, the Prince and Enid rode.
TENNYSON *Enid* st. 1.

4. To make allowance or provision for; take into account; deduct; abate; as, I *allow* much on account of his ignorance; to *allow* one-tenth for shrinkage. **5.** To concede to be, or to be true; acknowledge; as, to *allow* one's guilt.

We may *allow,* or admit, that which we have disputed, but of which we have been convinced, or we may *allow* certain premises as the basis of argument; but we assert, not *allow,* our own opinions. R. G. WHITE *Words and their Uses* p. 90. [SH. & CO. 1870.]

6. [Colloq., U. S.] (1) To assert or believe as true; affirm; calculate; conclude; opine. (2) To have in the mind, as an intention; propose; intend: used especially in the southern United States.

But I come back here *allowin'* To vote as I used to do.
JOHN HAY *Banty Tim* st. 2.

7. [Prov. Eng. & Ir.] To counsel; advise. **8**†. To praise.

II. *i.* To make allowance, concession, or abatement; as, to *allow* for discrepancies. [< OF. *alouer*, < LL. *allocō;* see ALLOCATE.]—**al-low'er**, *n.*

SYN.: admit, concede, consent to, grant, let, permit, sanction, suffer, tolerate, yield. We *allow* that which we do not attempt to hinder; we *permit* that to which we give some express authorization. When this is given verbally it is called permission; when in writing it is commonly called a permit. There are establishments that any one will be *allowed* to visit without challenge or hindrance; there are others that no one is *allowed* to visit without a permit from the manager; there are others to which visitors are *admitted* at specified times, without a formal permit. We *allow* a child's innocent intrusion; we *concede* a right; *grant* a request; *consent* to a sale of property; *permit* an inspection of accounts; *sanction* a marriage; *tolerate* the rudeness of a well-meaning servant; *submit* to a surgical operation; *yield* to a demand or necessity against our wish or will, or *yield* something under compulsion; as, the sheriff *yielded* the keys at the muzzle of a revolver, and *allowed* the mob to enter. *Suffer,* in the sense of mild concession, is now becoming rare, its place being taken by *allow, permit,* or *tolerate.* See CONCEDE; ENDURE; PERMIT.— ANT.: deny, disallow, disapprove, forbid, protest, refuse, reject, resist, withstand.— PREP.: allow *of* such an action; allow one *in* such a course; allow *for* spending-money.— **to allow a thing to one** [Local, U. S.], to regard it as right that he should suffer or bear it.— **to a. of,** to permit; approve.

al-low'a-ble, } 1 a-lau'ə-bl; 2 ă-low'a-bl, *a.* That
al-low'a-bl', } may be allowed; permissible; admissible; not improper or objectionable. SYN.: see ADMISSIBLE.—**al-low'a-bl(e-ness**ᵖ, *n.*—**al-low'a-bly**, *adv.*

al-low'ance, 1 a-lau'ans; 2 ă-low'anç, *rt.* [-ANCED; -ANCING.] To put on an allowance; allot a stated quantity to; limit as to amount, especially of food, as in shipwreck.

al-low'ance, *n.* **1.** That which is allowed; a portion or amount granted for some purpose, as by custom, military regulation, operation of law, or judicial decree; also, a limited amount or portion, as of income, or food; as, an *allowance* of rations; an *allowance* for tare or breakage; to put one on an *allowance* of bread.

[The Duke of Marlborough] drew a large *allowance* under pretense of keeping a public table.
MACAULAY *England* p. 347. [P. S. & CO. 1856.]

2. The act of allowing; toleration; sanction; concession; admission; as, the *allowance* of a claim. **3.** Recognition of modifying circumstances, or deduction or addition therefor; a margin for deviations from a standard; as, an *allowance* for tare or for variation (as in weight of coins); to make *allowance* for age.

Too little *allowance* is made for the surprises of genius.
E. C. STEDMAN *Poets of America* p. 3. [H. M. & CO. 1885.]

4. Acknowledgment. **5.** *Founding.* A portion, as of a core, beveled to prevent the friable edges touching while closing the mold. [< OF. *alouance*, < *alouer;* see ALLOW, *rt.*] **al-low'ment**†. SYN.: see PERMISSION.—**time allowance,** the length of time by which one competitor in a race is allowed to start in advance of the other or others, or the amount which is credited to him by reason of some acknowledged inferiority on his part.

al-lowed', } 1 a-laud'; 2 ă-lowd', *pa.* That is permitted;
al-lowd'ə, } acknowledged; admitted; licensed; as, the *allowed* freedom of speech.—**al-low'ed-ly**, *adv.*

al-low'er, 1 a-lau'ər; 2 ă-low'er, *n.* One who allows.

al-lox'an, 1 a-leks'an; 2 ă-lŏks'an, *n. Chem.* A crystalline compound ($C_3H_2N_2O_4$) formed by the oxidation of uric acid with nitric acid. [< ALLANTOIN + OXALIC.] **mesoxalyl urea**†.—**al-lox'an-ate**, *n.* A salt formed by the union of alloxanic acid and a base.—**al"lox-an'ic**, *a.*

al"lox-an'tin, 1 al'eks-an'tın; 2 ăl'ŏks-ăn'tin, *n. Chem.* A white crystalline compound ($C_8H_4N_4O_4 + 3H_2O$) obtained as from alloxan by reduction. [< ALLOXAN.]

al-lox"u-re'mi-a, 1 a-leks"yu-rī'mi-ə; 2 ă-lŏks"yu-rē'mi-a, *n. Pathol.* The presence of alloxuric bases in the blood. [< ALLOXAN + Gr. *ouron*, urine, + *haima*, blood. **al-lox"u-rae'mi-a**†.

al"lox-u'ric, 1 al'oks-yū'rık; 2 ăl'ŏks-yu'ric, *a. Chem.* Relating to alloxan and urea; affected by, composed of, or containing alloxan and urea. See PURIN. [< ALLOXAN + UREA.]

al-lox"y-pro-te'ic, 1 a-leks'ı-pro-tī'ık; 2 ă-lŏks'y-pro-tē'ic, *a.* Containing nitrogen and sulfur, as an acid found in urine. [< ALLO- + OXY- + PROTEIN.]

al-loy', 1 a-loi'; 2 ă-lŏy', *v.* **I.** *t.* **1.** To mix with an alloy; reduce the purity of, or otherwise modify, by admixture; hence, to modify; temper; debase; impair.

Pauperism, pauper, poor man, are expressions of pity, but pity *alloyed* with contempt. LAMB *Essays of Elia* p. 180. [W. L. & CO.]

2. To form into an alloy; combine by mixing.

II. *i.* To enter into combination; form an alloy. [< F. *aloyer*, < OF. *alier*, < *alligo;* see ALLIGATION.]

al-loy', 1 ə-loi' *or* al'oi; 2 a-lŏy' *or* ăl'ŏy, *n.* **1.** A homogeneous compound or mixture of two or more metals, as brass, formed by the fusion of copper and zinc, or bronze, consisting of copper and tin: commonly produced by fusing together the constituent metals. See AMALGAM.

The following are some of the most important alloys: (1) *Aluminum* combines with copper to form *aluminum bronze,* used in machinery, and with zinc to form *aluminum zinc,* used in parts of chemical apparatus requiring strength and lightness. (2) *Antimony* alloys with lead, potassium, sodium, and tin. With lead and tin it forms *type-metal,* with tin *music-metal,* and with tin and other metals *plate pewter, Britannia metal,* and *queen's-metal,* the last-named used in jewelry. (3) *Arsenic* is used in lead to produce metal for shot. With copper it yields *white copper* and *tombac,* used for imitation jewelry. (4) *Bismuth* alloys chiefly with lead, tin, and type-metal, forming *fusible alloy,* used for clichés, and *pewterers' soft solder.* (5) *Cadmium* combines with mercury to form an amalgam used to fill teeth, with gold and silver to form an alloy used by jewelers, and with tin, lead, and bismuth to form *Wood's fusible alloy.* (6) *Chromium* alloys with iron to form *ferro-chrome,* and also with tin and copper. (7) *Copper* combines with zinc to form *brass,* with tin to form *bronze, gun-metal,* and *bell-metal,* and with lead to form *pot-metal,* used for faucets and domestic utensils. Alloys of these four metals in varying proportions also exist. (8) *Gold* alloys with copper, silver, manganese, cobalt, nickel, antimony, tin, zinc, bismuth, lead, the platinum metals, arsenic, tellurium, and mercury. With copper it forms a reddish gold, and with silver a lighter-colored alloy called *jewelers' gold.* Gold coin is an alloy of gold and copper, generally with silver also. (9) *Iron* alloys with copper, zinc (forming *Atch's metal,* used for casting cannon), tin, titanium, manganese (forming *ferromanganese,* used in the Bessemer steel process), tungsten, nickel (*meteoric iron*), cobalt, gold, and platinum. (10) *Lead* combines with antimony and tin to form *type-metal,* with arsenic for shot, with tin to make *pewter* and *solder,* with bismuth to form *fusible alloy.* (11) *Manganese* is used with iron to form *steel,* as *spiegeleisen.* It is used in the Bessemer process to deoxidize the metal. (12) *Mercury* forms with tin an amalgam for silvering mirrors, with gold and tin one for gilding, with tin, gold, and silver one used for filling by dentists, with sodium one used for metallurgical purposes, and with zinc one used for coating the rubbers of electric machines. (13) *Nickel* alloys with copper and zinc to form white metals used largely in place of silver and called *albata, British plate, electrum, German silver, paktong, tutenag, white copper,* etc. (14) *Palladium* yields with silver and copper tough alloys used in the making of hard instruments. (15) *Platinum* alloys with gold, and with the various platinum metals with which it is found in nature. (16) *Rhodium* combines with platinum metals and with steel to form a fusible alloy. (17) *Silver* alloys with copper, as in *coin* and *solder,* and with tin, mercury, and other metals. (18) *Tin* combines with lead to form *pewter* and ordinary plumbers' or tinsmiths' solder, with copper and antimony to form *Babbitt metal.* (19) *Zinc* alloys with copper to form *brass,* and also with tin and lead as in *Burton's alloy,* used for plowshares.

2. The baser metal in such compound or mixture that reduces the commercial value of the compound or mixture as its proportion is increased; as, the *alloy* used for hardening gold and silver coins. **3.** Anything that reduces the purity or excellence of what is good or desirable; as, a noble character without *alloy* of meanness.

There is . . . much of base *alloy* in our very best thoughts.
SCOTT *Pirate* p. 159. [D. F. & CO.]

Delight hath no taint of *alloy.* PHŒNE CARY *A Canticle* st. 1.

4†. Standard; fineness. [< F. *aloi;* see ALLOY, *v.*]

SYN.: admixture, adulteration, debasement, deterioration. *Adulteration, debasement,* and *deterioration* are always used in the bad sense; *admixture* is neutral, and may be good or bad; *alloy* is commonly good in the literal sense. An excess of *alloy* virtually amounts to *adulteration;* but *adulteration* is now mostly restricted to articles used for food, drink, medicine, and kindred uses. In the figurative sense, as applied to character, etc., *alloy* is unfavorable, because there the only standard is perfection.— PREP.: an alloy *of* silver and copper; the alloy *in* the ornament.—**alloy balance,** an adjustable balance which is in equilibrium when the metals in the scale-pans are in the proper proportions for forming an alloy.— **Homberg a.,** a silver-white alloy made by mixing equal parts of lead, bismuth, and tin.— **Krafft's a.,** an alloy consisting of 5 parts bismuth, 2 parts lead, and 1 part tin, having its melting-point at 104° C. (220° Fahr.).— **Lichtenberg's a.,** see FUSIBLE METAL.— **Lipowitz's a.,** an easily fusible alloy of 15 parts bismuth, 8 of lead, 4 of tin, and 3 of cadmium, melting at 158° F., and used for soldering white metallic objects injured by high temperature, such as Britannia metal, and for fine or fragile castings.— **Prinsep's alloys,** in pyrometry, alloys of gold, silver, and platinum so combined that the temperature of a furnace may be found by placing them in it and noting those that are fused: so called from their inventor, James Prinsep.— **Retz a.,** an alloy which withstands well the corroding effect of alkalis or acids. It is constituted of 15 parts copper, 1 of antimony, 2.34 of tin, 1.82 of lead.

al"lu-au'dite, 1 al"yu-ô'dait; 2 ăl"yu-ą'dit, *n. Mineral.* A brownish-red iron-manganese phosphate, massive or in nodules, and believed to be an alteration-product of triphylite. [< François *Alluaud* (1778–1865), French mineralogist.]

al-lude', 1 a-liūd'; 2 ă-lūd', *vi.* [AL-LUD'ED; AL-LUD'ING.] To refer incidentally, indirectly, or by suggestion; as, to *allude* to a past event.

Allude is in danger of losing its peculiar signification, which is delicate and serviceable. . . . [It] means to indicate jocosely, to hint at playfully. . . . Allusion is the by-play of language.
R. G. WHITE *Words and their Uses* ch. 5, p. 90. [SH. & CO. 1870.]

[< L. *alludo,* treat lightly, < *ad,* at, + *ludo,* play.]

Syn.: advert, hint, imply, indicate, insinuate, intimate, mention, point, refer, signify, suggest. These words divide into two classes along the line of the expressed or unexpressed; *advert, allude, mention,* and *refer* are used of language that more or less distinctly utters a certain thought; the others of language from which it may be inferred. We *allude* to a matter slightly, perhaps by a word or phrase, as it were in byplay; we *advert* to it when we turn from our path to treat it; we *refer* to it by any clear utterance that distinctly turns the mind or attention to it; as, marginal figures *refer* to a parallel passage; we *mention* a thing by explicit word, as by naming it. The speaker *adverted* to the recent disturbances; he *alluded* to the remissness of certain public officers; tho he *mentioned* no name, it was easy to see to whom he *referred.* One may *hint* at a thing in a friendly way, but what is *insinuated* is always unfavorable, generally both hostile and cowardly. One may *indicate* his wishes, *intimate* his plans, *imply* his opinion, *signify* his will, *suggest* a course of action.— PREP.: *to.*

al"lu-mée', 1 al"ü-mē'; 2 ăl"ü-mē', *a.* [F.] *Her.* Glowing; red; shining: noting the eyes of a beast so represented on an escutcheon.

al"lu-mette', 1 al"ü-met'; 2 ăl"ü-mĕt', *n.* [F.] A friction-match; formerly, a spill.

all'-ups", 1 ôl'-ups"; 2 ąl'-ŭps", *n.* Unsorted coal of all grades, except fine slack, raised from any seam.

al-lur'antt, *a.* Alluring.

al-lure', 1 a-liūr'; 2 ă-lūr', *v.* [AL-LURED'; AL-LUR'ING.]

I. *t.* **1.** To draw with or as with a lure; attract by the prospect of pleasure or advantage. **2.** To attract insidiously; charm; fascinate.

The ruddy square of comfortable light, . . .
Allured him, as the beacon-blaze *allures*
The bird of passage. TENNYSON *Enoch Arden* st. 44.

II. *i.* To have a pleasing effect; exercise attraction.

Why should the vest on him *allure,*
Which I could not on me endure? EMERSON *The Problem* st. 2.

[< OF. *aluer,* < *à* (< L. *ad*), to, + *lurer, leurrer;* see LURE, *vt.*] — **al-lur'er,** *n.*

Syn.: attract, cajole, captivate, coax, decoy, draw, entice, inveigle, lure, seduce, tempt, win. We may *attract* others to a certain thing without intent; as, the good unconsciously *attract* others to virtue. We may *allure* to that which is evil, but also to that which is good and noble by purpose and endeavor, as in the familiar line "*Allured* to brighter worlds, and led the way." GOLDSMITH *Deserted Village* l. 170. *Lure* is rather more akin to the physical nature. It is the word we would use of drawing on an animal. *Coax* expresses the attraction of the person, not of the thing. A man may be *coaxed* to that which is by no means *alluring. Cajole* and *decoy* carry the idea of deceiving and ensnaring. To *inveigle* is to lead one blindly in. To *tempt* is to endeavor to lead one wrong; to *seduce* is to succeed in *winning* one from good to ill. *Win* may be used in either a bad or a good sense, in which latter it surpasses the highest sense of *allure,* because it succeeds in that which *allure* attempts; as, "he that *winneth* souls is wise." *Prov.* xi, 30. See DRAW. — Ant.: chill, damp, deter, dissuade, drive away, repel, warn. — PREP.: allure *to* a course; allure *by* hopes; allure *from* evil *to* good.

al-lure'[1], *n.* The act of alluring, or that which allures.

The covered promenade of the Burlington Arcade is, on rainy days, a great *allure* for a small chop-house hard by.
N. P. WILLIS *People I have Met* p. 37. [AL. B. & CO. 1853.]

al-lure'[2], *n.* [Rare.] Air; mien; bearing.

O Spanish eyebrows, Spanish eyes, Voice and *allures* of Spain.
F. W. H. MYERS *Renewal of Youth* l. 192.

al-lure'ment, 1 a-liūr'ment *or* -ment; 2 ă-lūr'ment, *n.* **1.** The act or process, or the quality or power, of alluring; enticement; fascination. **2.** Anything that allures; a charm, lure, or bait.

Difficulty, abnegation, martyrdom, death are the *allurements* that act on the heart of man. CARLYLE *Heroes, etc.* p. 70. [L. CO.]

SYN.: see ATTRACTION; BAIT; BLANDISHMENT.

al-lur'ing, 1 a-liūr'iŋ; 2 ă-lūr'ing, *pa.* So pleasing as to move one to draw near; attractive; tempting; fascinating. SYN.: see ATTRACTIVE.— **-ly,** *adv.*— **-ness,** *n.*

al-lu'sion, 1 a-liū'ʒən; 2 ă-lū'zhon, *n.* **1.** The act of alluding, or the words by which one alludes; an indirect and incidental reference to something without definite mention of it.

He who has actually to govern [must] be perpetually guided by considerations to which no *allusion* can be found in the writings of Adam Smith. MACAULAY *Eng.* vol. i, p. 1046. [W. T. A. 1881.]

2. *Rhet.* A species of comparison in which the comparative words are omitted, yet the represented object is still made the leading theme; as, "the self-seeking will betray his friend or brother with a Judas kiss." [< L. *allusio(n-),* < *alludo;* see ALLUDE.]

al-lu'sive, } 1 a-liū'siv; 2 ă-lū'siv, *a.* **1.** Of, pertaining
al-lu'sivs, } to, or like allusion; referring to something not directly mentioned; suggestive.

Her helpless misery . . . she was trying to make present to Deronda in . . . *allusive* speech. ELIOT *Deronda* p. 207. [H. 1876.]

2. Containing allusion; metaphorical; figurative. [< L. *allusus,* pp. of *alludo;* see ALLUDE.] **al-lu'so-ry†.**— **al-lusive arms** (*Her.*), canting arms. See CANTING.— **al-lu'-siv(e-ly^s,** *adv.*— **al-lu'siv(e-ness^s,** *n.*

al-lu'vi-al, 1 a-liū'vi-əl; 2 ă-lū'vi-al, *a.* Of, pertaining to, or composed of alluvion or alluvium; as, *alluvial* deposits or formations.

Alluvial plains are mostly flood-plains of rivers. [< L. *alluvius,* < *alluo,* wash upon, < *ad,* to, + *luo,* wash.] **al-lu'vi-ant†; al-lu'vi-ous†.**— **alluvial cone** (*Phys. Geog.*), the fan-shaped accumulation of detritus deposited where a river issues from a steep course upon flat land. **a. fan†.** — **A. epoch,** the latter part of the Champlain period (Quaternary), overlying the Diluvial period, and characterized by more quiet fluvial and lacustrine depositions.

al-lu'vi-al, *n.* Alluvial soil, especially in Australia such soil bearing gold.

al-lu'vi-a'ted, 1 a-liū'vi-ēt'ed; 2 ă-lū'vi-ąt'ĕd, *pa.* Covered or filled with alluvium; as, an *alluviated* valley.

al-lu"vi-a'tion, 1 a-liū"vi-ē'shən; 2 ă-lū"vi-ą'shon, *n. Geol.* The process of building alluvial cones and deltas.

The watersheds . . . are rearranged . . . by *alluviation.* G. K. GILBERT *U. S. Geog., etc., Surv., 1880* p. 136. [GOV. PTG. OFF.]

al-lu'vi-on, 1 a-liū'vi-ən; 2 ă-lū'vi-ŏn, *n.* **1.** The earthy material deposited by floods; alluvium: used in this form especially in law. See note under ALLUVIUM. Such accretions, if gradual, belong legally to the owner of the soil at the water's edge; but otherwise, if the increase occur from some sudden and violent cause.

Uncas pointed out the impression of a moccasin in the moist *alluvion.* COOPER *Last of the Mohicans* p. 166. [P. & C.]

2. Inundation; flood. **3.** The washing of sea-waves against a shore, or of a river along its banks. **4.** A downpour of volcanic cinder-mud, which, consolidated, is called tufa. [F., < L. *alluvio(n-),* < *alluo;* see ALLUVIAL.] **al-lu'vi-o†.**

al-lu'vi-um, 1 a-liū'vi-um; 2 ă-lū'vi-ŭm, *n.* [-VI-A or -VI-UMS, *pl.*] *Geol.* **1.** Recent deposits of sand, gravel, or mud, formed wherever the flow is checked in the currents of rivers, lakes, or estuaries. Such deposits occur chiefly as flood-plains of rivers and lakes, as bars in rivers and at mouths of estuaries, or as deltas. **2.** More loosely, any subaqueous deposits of fluviatile detritus, in which sense many old strata are alluvial deposits. **3.** [Rare.] Volcanic cinder-mud; alluvion.

Alluvium has been much confused with *alluvion,* and some dictionaries treat them as identical in meaning. This is, however, plainly wrong, since *alluvion* has had an extensive usage as equivalent simply to *inundation,* which *alluvium* has not had. In a single book (Lyell's *Principles of Geology*) *alluvium* has, in the later editions, been substituted for the *alluvion* of the earlier editions, with the meaning of a flood of wet volcanic cinders. Moreover, *alluvion* has legal uses which *alluvium* does not have. [L., prop. neut. of *alluvius;* see ALLUVIAL.]

Egyptian and Semitic Alphabets, and their later Equivalents. (From *The Alphabet,* by Isaac Taylor. [E. P. & CO. 1890.])

The hieroglyphics are taken from the monuments; the hieratic characters from the Papyrus Prisse; the Semitic characters from the Moabite Stone.

The alphabets of different nations vary in number of letters. The Arabic alphabet has 28 letters, Armenian 38, Coptic 32, Dutch 26, English 26, French 25, Georgian 39, German 26, Greek 24, Hebrew 22, Italian 21, Latin 23, Persian (Parsi or Zend) 45, Russian 35 Sanskrit 49, Slavonic 40, Spanish 27 (reckoning the digraphs *ch, ll,* and *rr*), Syriac 22. The Chinese have no alphabet, but about 20,000 syllabic characters. The Japanese syllabary consists of seventy-two syllabic sounds, to express which forty-eight characters are employed.

It was at one time supposed that the alphabet was invented by the Phenicians and that the names and ideograms representing the various letters were phonetically and graphically descriptive of certain objects chosen by them as symbols, but recent inquiry in this direction has tended rather to unsettle than to confirm this theory. In 1859 Emmanuel de Rougé put forward a theory that the Phenician characters were derived from the Egyptian hieratic symbols, as evidenced by the Papyrus Prisse, an Egyptian document written probably as early as 2000 B. C. and possibly much earlier. His theories were adopted by many scholars, but were somewhat weakened by the discovery at Tel-el-Amarna (1887–1888) of the cuneiform tablets containing the Asiatic correspondence of Amenophis IV., written in Syria about 1375 B. C., which indicates that cuneiform characters were in use at that time among the Phenicians and other Semitic peoples and that Babylonian was then apparently the language of international communication. This theory has been developed by Delitzsch (1897) and Peiser (1900). The objection may be brought against this and the Egyptian hieratic derivation that the characters are at least 1,000 and very possibly 2,000 years older than the earliest Phenician inscriptions of which we have any record. Professor Flinders Petrie has suggested that a signary or sign-system (whether alphabetic, hieroglyphic, or syllabic is uncertain) was in use about the Mediterranean littoral from an extremely early date, and that from the multiplicity of signs thus gradually formed the later alphabet was selected and grouped by the Phenicians. More light may be shed upon this discussion when the early systems of writing which have been discovered

on the island of Crete are better understood. The evidence now at hand in this connection seems to support the theory of de Rouge, and Arthur J. Evans and other scholars who know most of the Cretan inscriptions are of the opinion that the Minoan pictographs are in many cases identical with Egyptian hieroglyphs and that some of the pictographs found in the Cretan inscriptions are the prototypes of the Greco-Phenician letters. The Greeks probably adopted the Phenician alphabet about 1000–800 B. C., prior to their great colonizing movement, which carried it far and wide along the Mediterranean coasts. They made no change in the names or order of the letters, but altered the values, transforming the four Semitic breathings into vowels, modifying the spirant *vau* into the fifth (*u*), and adopting the sibilant *zayin* for the double consonant *zeta* (*dz*). *samech* for *xi* (*x*), and *shin* for the simple *s*. Some supplementary sounds were added to this alphabet, which underwent many local variations and finally crystallized into the form familiar to us in the Greek classics by the disuse of *vau* (*digamma*), the invention of ω for the long *o* sound, η for the long *e* sound, etc. At first the Greeks wrote from right to left, the Phenician plan, then alternately from right to left and from left to right, after the manner of a man plowing, from which the name of *boustrophēdon* (ox-turning) was derived. The laws of Solon were written in this fashion, which was superseded in the fifth century by the left-to-right method, now practically universal among Occidental nations. Through the Dorian Greeks of Cumæ and Sicily the alphabet was brought to Italy, where it again underwent much modification. At this time it had not yet received the addition of Ψ and Ω, still retained *vau* and *koppa*, and consisted of twenty-four letters. The Latin alphabet kept the Phenician *kaph* and *koph* (*k* and *q*) and dropped the three letters θ, φ and χ, as it required no aspirate sounds. *Zeta* also was soon dropped, being replaced by the new letter, *g*, a modification of *c*, which seems to have served for both the *k* and *g* sounds, and with the twenty-one letters thus obtained the Latin alphabet continued until it was applied to the languages of western Europe, through the spread of Roman conquests. The five additional letters which make up the twenty-six of the modern English alphabet arose from the development of *i* into *j*, of *u* into *w*, *v*, and *y*, and the addition of *z*. The only modern European language which does not derive its alphabet in this way is the Russian, which takes its characters from the Byzantine Greek of the 9th century, with additions by Cyril and others, to cover Slavonic sounds, up to the number of thirty-five letters.

The only word that is formed of mere letters is '*Alphabet*' . . . . the English A B C. MÜLLER *Science of Language* second series, lect. ii, p. 87. [S. 1875.]

The *alphabets* of modern Europe are derived from the Greek. . . . The Greek alphabet, in turn, is derived from the Phœnician. *New Internat. Encyc.* vol. i, p. 392.

(2) Any system of symbols or signs representing letters, syllables, words, or phrases; as, a shorthand or a deaf-and-dumb *alphabet*. See TELEGRAPHY; STENOGRAPHY; DEAF-AND-DUMB ALPHABET, under DEAF. 2. The simplest elements or rudiments of anything; as, to master the *alphabet* of mathematics.

And in life's lengthened *alphabet* what used to be
To our eires X Y Z is to us A B C.
OWEN MEREDITH *Lucile* pt. i, can. 2, st. 3.

3†. An index, list, or series. 2. In the same way; likewise. [< AS. *eal swa*, entirely so; see ALL, SO.]

Syn.: as well, as well as, besides, in addition, in like manner, likewise, similarly, too, withal. While some distinctions between these words and phrases will appear to the careful student, yet in practise the choice between them is largely to secure euphony and avoid repetition. The words fall into two groups; *as well as, besides, in addition, too, withal*, simply add a fact or thought; *also* (all so), *in like manner, likewise, similarly*, affirm that what is added is like that to which it is added. *As well* follows the word or phrase to which it is joined. We can say the singers *as well as* the players, or the players, and the singers *as well*. — Ant.: but, in spite of, nevertheless, notwithstanding, on the contrary, on the other hand, yet.

2. *Civ. Law.* The conduct of a case by alternate pleading; question and answer.

SYN.: affray, brawl, broil, contention, controversy, debate, discussion, disputation, dispute, dissension, disturbance, fracas, quarrel, wrangle, wrangling. *Debate, discussion,* and *dispute* have all an honorable use, and are at times necessary. *Dispute* is preferably used of rights and claims; as, the title or the will is in *dispute; debate* and *discussion* refer rather to abstract matters, and may be entirely amicable. *Disputation* has a touch of bitterness. *Altercation, contention, controversy,* and *wrangle* are all words signifying more or less of ill feeling; so is *dispute* in common speech; as, a sharp *dispute. Contention* and *controversy* are capable of a good sense in the learned or elevated style. *Debate* should never degenerate into *altercation. Wrangle* denotes rather a fiercer and coarser *dispute* than *altercation.* When the *altercation* or *wrangle* passes from words to blows, it becomes an *affray* or *brawl.* See QUARREL.— Ant.: agreement, concord, consonance, harmony, unanimity, unity.— Prep.: *with.*

al'ter-ca-tive†, *a.* Given to or characterized by altercation.

al'terd, *pp.* Altered. S. S.

al"ter-eg'o-ism, 1 al"[*or* ôl"]tər-eg'o-[*or* -i'go-]izm; 2 ăl"[*or* ąl']ter-ĕg'o-[*or* -ē'go-]izm, *n.* An altruistic feeling for only those individuals who are in the same situation as oneself. — **al"ter-eg"o-is'tic,** *a.*

al-ter'i-ty, 1 al-ter'i-ti; 2 ăl-tĕr'i-ty, *n.* The state or quality of being different; otherness. [< F. *altérité,* < LL. *alteritā(t-)s,* < L. *alter,* other.] **al"te-ri'e-ty**†**.**

al'tern, 1 al'[*or* ôl']tərn; 2 al'[*or* ąl']tern, *a.* **1.** [Rare.] *Crystal.* Having opposite parts corresponding in form, but alternating with each other in the position of sides and angles. **2**†**.** Alternate. [< L. *alternus,* < *alter,* other.] — **altern base** (*Trig.*), in oblique triangles, double the distance from the middle point of the base to the foot of the perpendicular dropped from the vertex. — **al-ter'na-cy,** *n.* Alternation. — **al-ter'nant,** *a.* Alternating; specif., in geology, made up of alternate layers.

al-ter'nant, 1 al-[*or* ôl-]tûr'nant; 2 ăl-[*or* ąl-]tĕr'nant, *n. Math.* An alternating function; especially, a determinant whose n^2 constituents are n different functions of n variables.

Al"ter-nan'the-ra, 1 al"tər-nan'thi-rə; 2 äl"ter-nän'the-ra, *n. Bot.* **1.** A small genus of tropical and subtropical herbs of the amaranth family (*Amarantaceæ*), with opposite leaves and axillary heads of inconspicuous flowers. Several species are cultivated as foliage-plants. **2.** [a-] Any plant of this genus or the closely related genus *Telanthera.* See TELANTHERA. [< L. *alternus,* another, + ANTHER.]

Al"ter-na'ri-a, 1 al"tər-nā'ri-ə; 2 äl"ter-nä'ri-a, *n.* A genus of fungi imperfecti having dark-colored dictyosporic conidia borne in chains, and causing destructive diseases of plants, as the early blight of potatoes, the leaf-spot of violets, etc.

al"ter-na'ri-ose, 1 al"tər-nā'ri-ōs; 2 äl"ter-nä'ri-ōs, *n. Phytopathol.* A disease of plants caused by parasitic fungi belonging to the form-genus *Alternaria,* usually manifested by spots on the leaves or other organs of the host-plant. It attacks the cabbage, carnation, flax, watermelon, and other plants.

al"ter'nat', 1 al"tər'nä'; 2 äl"tĕr'nät', *n.* [F.] In diplomacy, rotation in precedence, as in the signing of treaties, to avoid questions of rank between countries. WOOLSEY *International Law.*

al'ter-nate, 1 al'[*or* ôl']tər-nēt; 2 ăl'[*or* ąl']ter-nāt (XIII), *v.* [-NAT'ED; -NAT'ING.] **I.** *t.* **1.** To cause to be alternate, or to occur alternately; change by alternation; as, to *alternate* joy and grief, or joy with grief.

These grave and weighty councils were *alternated* by huge feasts and revels. IRVING *Astoria* p. 24. [G. P. P. 1861.]

2. [Rare.] To do by turns; perform successively: said of persons who follow each other in succession; as, the sentries *alternated* their watch.

II. *i.* **1.** To be alternate; occur alternately; follow one another interchangeably; as day *alternates* with night. **2.** To pass back and forth between one thing, state, or action and another; as, to *alternate* between joy and grief.

A great soul . . . *alternates* between the highest height and the lowest depth. CARLYLE *Heroes, etc.* p. 27. [L. CO.]

3. *Elec.* (1) To change from the positive to the negative direction and back rapidly; vibrate; pulsate; as, an *alternating* current. (2) To produce such a current: said of a dynamo. The periodicity of an alternating current is the number of cycles through which it passes in one second, usually from 25 to 60. **4.** *Alg.* To change sign, as a function, by an interchange of variables. [< L. *alternatus,* pp. of *alterno,* < *alter,* other.] — Prep.: to alternate one thing *with* (more rarely *by*) another; he alternates *between* courage and despair. — **al'ter-nat"ing-ly,** *adv.*

al-ter'nate, 1 al-[*or* ôl-]tûr'nit; 2 ăl-[*or* ąl-]tĕr'nat (XIII), *a.* **1.** Existing, occurring, or performed so as to succeed in turn; following each other by turns; first one and then the other; hence, reciprocal; as, *alternate* work and play; *alternate* angles.

The *alternate* ebb and flow Of Fortune and Adversity.
LONGFELLOW *To Cardinal Richelieu* st. 2.

2. Belonging to a series of things between every two members of which a member of another similar series intervenes; as, to write only the *alternate* numbers 2, 4, 6, 8, etc., or 1, 3, 5, 7, etc. **3.** *Bot.* (1) Placed singly, not opposite each other, on the stem, as leaves. (2) Standing before intervals between parts, as stamens when opposite the spaces between petals. [< L. *alternatus;* see ALTERNATE, *v.*] — **alternate angles,** see under ANGLE. — **a. generation,** see ALTERNATION OF GENERATIONS, under ALTERNATION. — **al-ter'nate-ness,** *n.*

al"ter'nate, *n.* **1.** [U. S.] One chosen to act in place of another, as of a delegate to a convention, in case of the absence or incapacity of that other; a substitute or second. **2.** [Rare.] An alternation; vicissitude. **3.** *Math.* A proportion derived from another by interchanging the means. **4.** [Archaic.] An alternative.

al-ter'nate-ly, 1 al-[*or* ôl-]tûr'nit-li; 2 ăl-[*or* ąl-]ter'nat-ly, *adv.* **1.** In alternate order or succession; so as to succeed or follow by turn; as, the tide rises and falls *alternately.* **2.** So as to intervene regularly between the other alternate members of a series; as, the rows were reckoned *alternately.* **3.** *Math.* By alternation; when the first antecedent is compared with the second, and the first consequent with the second, as in a proportion.

al"ter-na'tion, 1 al"[*or* ôl"]tər-nē'shən; 2 ăl"[*or* ąl"]tĕr-nā'shon, *n.* **1.** The act of alternating, or the state of being alternate; succession of the members of two series in alternate order; the occurrence or action of two things in turn; as, the *alternation* of day and night; the *alternation* of joy with sorrow.

The happiest life is made up of *alternation* of toil and leisure.
MATHEWS *Getting On in the World* ch. 3, p. 34. [S. C. G. 1877.]

2. Passage from one place, state, or condition to another and back again; as, *alternation* between hope and fear. **3.** *Math.* (1) Change of sign through permutation of two symbols. (2) The formation of an alternate proportion. **4.** *Eccl.* The responsive service of a liturgy. — **alternation of generations. 1.** *Biol.* A mode of reproduction in which for one or more generations the offspring are produced without union of the two sexes, and are independent of and different from the parent, but eventually revert to the parent type, as in plant-lice, ascidians, and many other animals. **2.** *Bot.* The antithetic alternation of phases in the life history of higher plants, a simple-celled phase (gametophyte) being succeeded by a phase built up of double cells in an arrested stage of sexual fusion (sporophyte). In ferns the spores borne on the fronds give rise to minute prothallia (the gametophytes) which produce reproductive bodies that after being fertilized grow out into ordinary ferns (the sporophytes).

The *alternation of generations* is . . . an alternation of asexual with sexual generation. HUXLEY *Anat. Invert.* p. 36. [A. 1888.]
— **a. of structural types,** in higher plants, the so-called alternation of generations where simple-celled or haplogamic phases give rise to and are superseded by double-celled phases.

al-ter'na-tive, } 1 al-[*or* ôl-]tûr'nə-tiv; 2 ăl-[*or* ąl-]tĕr'na-
al-ter'na-tive[2]**,** } tiv, *a.* **1.** Such that one, and but one, of them may exist, be taken, chosen, or done: said of two subjects of thought; as, *alternative* expedients. **2.** Such that it may exist, be taken, chosen, or done, instead of something else; as, an *alternative* supposition, proposal, plan, etc. **3.** Of or pertaining to alternation; implying or involving an alternative; as, "either" and "neither" have an *alternative* sense; *alternative* conjunctions. **4.** *Bot.* Having the parts of an outer whorl alternating with those of an inner: said of estivation, or of the arrangement of the parts of a flower in the bud. **5**†**.** Alternate. — **-ly,** *adv.* — **-ness,** *n.*

— **alternative obligation** (*Law*), an obligation stipulating for the doing of one or the other of two things and discharged by the performance of either. — **a. writ** (*Law*), a judicial order directing the person against whom it is issued to do a specified thing, or show cause why he should not do it.

al-ter'na-tive, *n.* **1.** That which is alternative, something that may or must exist, be taken, chosen, or done instead of something else; in the plural, two things of which one or the other may, and ordinarily must, exist, be taken, chosen, or done; as, the *alternative* of fine is imprisonment; these hard *alternatives* were given him: used sometimes (loosely) of more than two things.

The *alternative* of growing old is dying young.
HOLLAND *Gold-Foil* p. 93. [S. 1886.]

My decided preference is for the fourth and last of these *alternatives.* GLADSTONE *Oxford Essays* p. 26. [M.]

2. The opportunity or necessity of choosing between two things; as, he had the *alternative* of paying more rent or giving up the house. **3.** *R. C. Ch.* The nomination to vacant benefices exercised alternately by a diocesan bishop and the Pope, each having the patronage, either in alternate months or for periods of six months at a time.

SYN.: choice, election, pick, preference, resource. A *choice* may be among many things; an *alternative* is strictly a *choice* between two things; often it is one of two things between which a *choice* is to be made, and either of which is the *alternative* of the other; as, the *alternative* of surrender is death; or the two things between which there is a *choice* may be called the *alternatives;* both Mill and Gladstone are quoted as extending the meaning of *alternative* to include several particulars, Gladstone even speaking of "the fourth and last of these *alternatives.*" *Option* is the right or privilege of choosing; *choice* may be either the right to choose, the act of choosing, or the thing chosen. A person of ability and readiness will commonly have many *resources. Pick,* from the Saxon, and *election,* from the Latin, picture the objects before one, with freedom and power to choose which he will; as, there were twelve horses, among which I could take my *pick. A choice, pick, election,* or *preference* is that which suits one best; an *alternative* is that to which one is restricted; a *resource,* that to which he is glad to betake himself. See CHOICE.— Ant.: compulsion, necessity. — **voltaic alternative** (*Elec.*), a rapid reversal of the polarity of voltaic electrodes; also, the alternating current so produced.

al-ter"na-tiv'i-ty, 1 al-[*or* ôl-]tûr"nə-tiv'i-ti; 2 ăl-[*or* ąl-]tĕr"na-tiv'i-ty, *n. Ethics.* The ability to choose or reject either one of the members of an alternative; power of alternative choice.

Power solely to a thing being, in the given case, and with the given motives, without alteriety or alternative, we call an inalternative power, in opposition to a power which being at once either to or from, we call alternative power, or *alternativity.*
WHEDON *Freedom of the Will* p. 26, l. 12. [CA. & P. 1864.]

Al"u-con'i-dæ, 1 al'yu-kon'ı-dī; 2 ăl'yu-cŏn'ĭ-dē, *n. pl. Ornith.* The *Strigidæ* restricted; the barn-owls. **A-lu'co,** *n.* (*t. g.*) [< LL. *alucus*, for *ulucus*, popular name for owl.] — **a-lu'cine,** *a.*— **al"u-con'id,** *n.*— **al"u-con'oid,** *a.*

al'u-del, 1 al'yu-del; 2 ăl'yu-dĕl, *n.* **1.** One of a series of pear-shaped vessels of glass or earthenware fitted one into another and used for condensation, as in subliming mercury. **2.** A chimney-like tube of earthenware or glass in more than one piece. [OF., < Ar. *al-uthāl*, < *al*, the, + *uthāl*, pl. of *athla*, utensil.]

a-luff', 1 ə-lŭf'; 2 a-lŭf', *adv. Naut.* In the position of sails when a vessel's head is brought up to the wind, and the canvas flaps.

A"lu"in', 1 ą'lū'ąn'; 2 ä'lū'ăn', *n.* See ALVIN.

al'u-la, 1 al'yu-lə; 2 ăl'yu-la, *n.* [-LÆ, 1 -lī; 2 -lē, *pl.*] **1.** *Ornith.* The bastard wing; a tuft of feathers on the part corresponding to the thumb. See illus. under BIRD. **2.** *Entom.* (1) The membranous flap at the base of the wing of a dipterous insect. (2) A membranous appendage of the elytron in certain beetles, attached to the frenum and preventing the dislocation of the elytron. [Dim. of L. *ala*, wing.] — **al'u-lar,** *a.*

al'u-let, 1 al'yu-let; 2 ăl'yu-lĕt, *n. Entom.* Same as ALULA, 2.

al'um, 1 al'um; 2 ăl'ŭm, *vt.* To apply alum to; impregnate or adulterate with alum; treat with a solution of alum.

al'um, *n.* A compound formed by the union of a sulfate or selenate of aluminum, chromium, manganese, iron, indium, or gallium, and a sulfate or a selenate of sodium, potassium, rubidium, cæsium, ammonium, silver, or thallium. Other combinations are possible.

According to the Pharmacopœia of the United States [June 1. 1907], alum ($(Al)_2K_2(SO_4)_4+24H_2O$) should contain not less than 99.5 per cent. of pure aluminum and potassium sulfate. It crystallizes in the isometric system, usually in octahedrons or cubes, and then contains 24 parts of water of crystallization. In commerce three forms of alum are usually met with, those of ammonium, potassium, and sodium (*common alums*), which are used as astringents in medicine, as mordants in dyeing, and in the manufacture of baking-powder. An anhydrous alum, sodium, and aluminum sulfate is now chiefly used in the manufacture of alum baking-powders.

While chalk and *alum* and plaster are sold to the poor for bread.
TENNYSON *Maud* i, st. 10.

For all the uses of *alum*, in dyeing and calico-printing, in paper-making, and in the manufacture of colours, ammonia-alum answers quite as well as potash-alum, and hence both these salts are sold under the common name of *alum.*

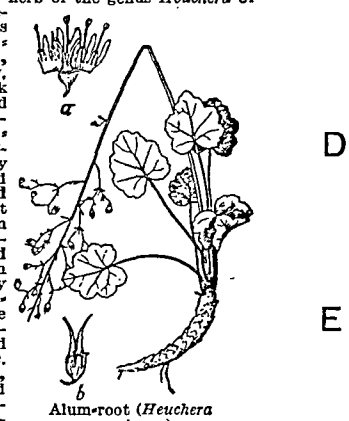
[OF. (F. *alun*), < L. *alumen.*] **al'lom†; al'lum†; al'lume†; al-u'men†; al'ym†.— al'um-bath",** *n.* A bath for preventing the frilling of films on photographic plates, or blistering of papers, composed of a saturated solution of potassium or chrome alum: used also in the carbon and other processes where bichromate of potassium is employed as a sensitizing agent, to remove the yellow color.— **a.-cake",** *n.* A solid mixture of aluminum sulfate and silica, formed by the action of sulfuric acid on roasted clay.— **a.-earth,** *n. Geol.* A soft variety of alum shale, generally bituminous.— **a.-flower,** *n.* Powdered burnt alum.— **a.-glass,** *n.* Alum crystallized.— **a.-rock,** *n.* Same as ALUNITE.— **a.-root,** *n.* A low herb of the genus *Heuchera* of the saxifrage family, especially *H. americana*, or its astringent root. **a.-bloom‡.— a. schist, shale,** or **slate,** a clayey, generally carbonaceous rock containing marcasite and yielding alum as a decomposition product.— **a.-stone,** *n.* Same as ALUNITE.— **a. whey,** whey made from milk coagulated with alum.— **burnt** or **dried a.,** the white powder left after the extraction from alum of the water of crystallization.— **concentrated** or **patent a.,** aluminum sulfate ($Al_2(SO_4)_3$) made by crystallization from alum-cake.— **iron a.,** a double sulfate of iron and potassium that occurs native and is then called *halotrichite.* **a.-feather‡.— Roman a.,** a potash-alum prepared from alunite, originally probably in Italy: highly valued by dyers, owing to its freedom from iron. **roche a.‡; rock a.‡.— saccharine a.,** a composition of alum, rose-water, and albumen, cooked and allowed to harden by cooling.



Alum-root (*Heuchera americana*).

a, flower laid open; *b*, mature capsule.

A'lum-Bagh, 1 ū'lum-bōg; 2 ä'lŭm-bäġ, *n.* A fort near Lucknow, India; captured by the British, 1857–1858.

A"lum-bra'do, 1 ū"lum-brū'do; 2 ä"lum-brä'do, *n.* [Sp.] *Ch. Hist.* One of a Spanish sect of the 16th century. See ILLUMINATI. **A"lom-bra'do‡.**

a-lu'men, 1 ə-liū'men; 2 a-lū'mĕn, *n.* [L.] *Pharm.* Alum.

al'um-feath"er, *n.* See IRON ALUM, under ALUM.

a-lu'mi-an, 1 ə-liū'mı-ən; 2 a-lū'mi-an, *n. Mineral.* A white aluminum sulfate ($Al_2S_3O_9$).

a-lu'mi-na, 1 ə-liū'mı-nə; 2 a-lū'mi-na, *n. Chem.* Aluminum oxid (Al_2O_3). Alumina is the most abundant of all the earths, and, being a common constituent of the silicate minerals, forms the basis of many rocks and soils. In its amorphous form it is a soft white insoluble powder. When crystallized it is intensely hard, and it is found nearly pure as sapphire (ruby, topaz, emerald, etc.), corundum, and emery. [< L. *alumen*, alum.] **al'u-mint; al'u-mine‡.— alumina cream,** a precipitate of aluminum hydrate, suspended in water when fresh.— **a-lu'mi-nate,** *vt.* [-NAT'ED; -NAT'ING.] To combine or saturate with a salt of aluminum (as alum), as in the treatment of paper with alum-water to prevent the ink from running when engravings are printed.— **a-lu'mi-nate,** *n. Chem.* A salt formed from aluminic hydrate ($Al_2(HO)_6$) by substituting a metal for the hydrogen.

al"u-min'ic, 1 al'yu-min'ık; 2 ăl'yu-mĭn'ic, *a. Chem.* Of, pertaining to, or containing aluminum. **al'u-mic‡.**

a-lu"mi-nif'er-ous, 1 ə-liū"mı-nif'ər-us; 2 a-lū"mi-nĭf'er-ŭs, *a.* Containing or yielding alum, alumina, or aluminum. [< L. *alumen*, alum, + *fero*, bear.] **al"u-mif'er-ous‡; al"u-nif'er-ous‡.**

al"u-min'i-form, 1 al'yu-min'ı-fōrm; 2 ăl'yu-mĭn'i-fôrm, *a.* Of or in the form of alum. [< L. *alumen*, alum, + *forma*, form.]

a-lu'mi-nite, 1 ə-liū'mı-nait; 2 a-lū'mi-nīt. *n. Mineral.* A soft white hydrous aluminum sulfate ($H_{18}Al_2SO_{18}$), that crystallizes in the monoclinic system.

al"u-min'i-um, 1 al'yu-min'ı-um; 2 ăl'yu-mĭn'i-ŭm, *n.* Same as ALUMINUM.— **aluminium oxid,** same as ALUMINA.

a-lu'mi-nize, 1 ə-liū'mı-naiz; 2 a-lū'mi-nīz, *vt.* [-NIZED; -NIZ'ING.] To treat or impregnate with alum; aluminate. **a-lu'mi-nise‡.**

a-lu'mi-no-, 1 ə-liū'mı-no-; 2 a-lū'mi-no-. A combining form used in mineralogy and the arts to indicate the presence of aluminum; as, *alumino-silicate.* **al"u-min'i-o-‡.— a-lu"mi-no-fer'ric,** *a.* Partly composed of aluminum and iron.— **a-lu"mi-nog'ra-phy,** *n.* The process of making and using aluminum plates for printing.— **a-lu"mi-no-graph'ic,** *a.*

a-lu"mi-no'sis, 1 ə-liū"mı-nō'sıs; 2 a-lū"mi-nō'sis, *n. Pathol.* Bronchial and pulmonary irritation caused by the inhalation of aluminum- or clay-dust: peculiar to porcelain- and aluminum-workers. [< ALUMINUM.]

a-lu'mi-no-ther"my, *n.* The process of generating heat by the chemical combination of aluminum. **a-lu"mi-no-ther'mics‡.— a-lu"mi-no-ther'mic,** *a.*

a-lu'mi-nous, 1 ə-liū'mı-nus; 2 a-lū'mi-nŭs, *a.* Of, pertaining to, or containing compounds of aluminum, as alum or alumina; clayey; as, an *aluminous* soil. **a-lu'mi-nose‡.— a-lu"mi-nos'i-ty†,** *n.*

a-lu'mi-num, 1 ə-liū'mı-nəm; 2 a-lū'mi-nŭm, *n.* [As between the forms *aluminum* and *aluminium*, there is great diversity of usage, but *aluminum* appears to be the form now preferred by manufacturers and chemists. The spelling followed by the United States Dispensatory and the United States Pharmacopœia is *aluminum.*] A light, silvery-white, malleable and ductile metallic element. See ELEMENT.

Aluminum does not oxidize or tarnish like most metals, when exposed to dry or moist air, and neither hot nor cold water has any effect on it. When hammered and rolled it becomes as hard as iron and it is lighter than glass. It has been proposed for use in many cases in which lightness and strength combined are desired, as for air-ships, as a substitute for iron in the manufacture of boats and bridges, and as a structural material. The tenacity with which aluminum clings to its oxygen made it at first an exceedingly expensive metal to extract from its ores, but since 1870, when the more recent advances in electricity began, methods have been devised for their electrolytic reduction.

The metal *aluminum* occurs widely and abundantly distributed in nature, but always in combination. . . . At the present day nearly all of the metal is made by the action of powerful electric currents on molten mixtures of its compounds; for example, the oxide dissolved in cryolite Formerly it was quite expensive, but it is now so cheap that it may be considered among the common metals. In 1879 a pound cost about 20 dollars, now it is worth from 35 to 40 cents. . . . Its properties make it a highly useful metal, and it is being employed for many purposes for which iron was formerly used. Most of the metal is used for making alloys. *Nat. Stand. Dispens.* p. 146. (J. B. LIPPINCOTT & CO. '05.)

[< L. *alumen*, alum.] **al"u-min'i-um‡.— aluminum brass**, a malleable, ductile alloy of aluminum, copper, and zinc, in proportions varying from 1 to 5.8 parts, 55.8 to 77.5 parts and 21 to 43 parts of each metal, respectively. Its tensile strength is greater than that of the usual brass, and it keeps its color better in the air.— **a. bronze** or **gold**, an alloy of aluminum and copper resembling pale gold: used in cheap jewelry, etc.— **a. chlorid** (*Chem.*), a yellowish-white crystalline powder ($Al_2Cl_6{\cdot}12H_2O$) used as a remedy in locomotor ataxia and as a disinfectant. It is soluble in water, alcohol, and when dehydrated also in ether.— **a. hydroxid** (*Chem.*), a compound ($Al_2(OH)_6$), obtained from alum by precipitation with alkali hydroxids or carbonates as a white, tasteless, odorless powder used in medicine, externally, as an astringent, and in the arts for manufacturing lakes with organic dyes.— **a. silver**, a bright alloy of aluminum and silver, used in instruments where lightness is desirable.— **a. sulfate.** *Chem.* **1.** A white, odorless crystalline powder ($Al(SO_4)_3+18H_2O$) soluble in water, and used in medicine as an antiseptic for purulent ulcers, etc. According to the United States Pharmacopœia it must be 99.5 per cent. pure. **2.** A yellowish-white to bluish-white crystalline mass — the crude form — used in the arts, as for clarifying water, dressing leather, sizing paper, and as a mordant in dyeing; concentrated or patent alum.

al'um-ish, 1 al'um-ĭsh; 2 ăl'ŭm-ĭsh, *a.* Of the nature of or slightly like alum.

a-lum'na, 1 ə-lum'nə; 2 ə-lŭm'na, *n.* [-NÆ, 1 -nī; 2 -nē, *pl.*] A woman graduate. [L., fem. of *alumnus*. See ALUMNUS.]

a-lum'nal, 1 ə-lum'nəl; 2 a-lŭm'nal, *a.* Of or pertaining to alumni or alumnæ.

a-lum'ni-ate, 1 ə-lum'nı-ēt; 2 a-lŭm'ni-āt, *n.* The time during which one is under instruction; pupilage.

a-lum'nol, 1 ə-lum'nōl *or* -nol; 2 a-lŭm'nōl *or* -nŏl, *n. Pharm.* The aluminum salt of naphthol disulfonic acid. [< ALUMINO- + -OL.]

a-lum'nus, 1 ə-lum'nus; 2 a-lŭm'nŭs, *n.* [-NI, 1 -nai; 2 -nī, *pl.*] A male graduate from a school, college, or other institution of learning; loosely, any pupil of a college or school. [L., foster-son, < *alo*, nourish.]

al'um-root", *n.* See under ALUM.

a-lun'dum, 1 a-lun'dum; 2 ă-lŭn'dŭm, *n.* A crystalline aluminous abrasive made in electric furnaces: a protected trade-mark name. NORTON & COMPANY, Worcester, Mass.

al"u-nif'er-ous, *a.* Same as ALUMINIFEROUS.

al'u-nite. 1 al'yu-nait; 2 ăl'yu-nīt, *n. Mineral.* A white hydrous potassium-aluminum sulfate ($H_4KAl_3S_2O_{14}$), crystallizing in the hexagonal system. [< F. *alun*, ALUM.] **al"u-min'i-lite‡.**

a-lu'no-gen, 1 ə-lū'no-jen; 2 a-lū'no-ĝĕn, *n. Mineral.* A silky white hydrous aluminum sulfate ($H_{36}Al_2S_3O_{30}$), crystallizing in the monoclinic system. [< F. *alun* (see ALUM) + -GEN.]

a-lu'pag, 1 ə-lū'pag; 2 ä-lu'päg, *n.* [P. I.] A tree, the alpay: Tagalog term.

Al"u-re'dus, *n.* Alfredus. See ALFRED.

a-lur'gite, 1 ə-lūr'jait; 2 a-lûr'ĝit, *n. Mineral.* A purple to red scaly variety of mica ($HR_2(AlOH)Al(SiO_3)_4$), found massive. [< Gr. *alourgēs*, purple.]

a'lus, 1 ā'lus; 2 ä'lŭs, *n.* [Anglo-Ind.] The tree of a Mahratta plow.
